Hello Amy,

I have attached some studies regarding fluoride in water.

Salmon are effected at levels below the .7mg/L Madison currently adds to its water.

"The results of our behavioral experiments suggest that fluoride concentrations of about 0.5 mg/L adversely affect the migration of adult salmon and that 0.2 mg F/L may be near or below the thresh- old for fluoride sensitivity in Chinook and coho salmon. It was apparent that the chinook and chum salmon in the fluoride tests were much more reluctant to move upstream and make a choice of flume arms than fish in control tests. Thus, fluoride could affect the migratory behavior of adult salm- on at John Day Dam not only by influencing their choice of fishway but, more importantly, by de- laying their entry into either fishway."

Fluoride in drinking water is a social justice issue. Blacks are harmed more by fluoride than whites. I attached an article which includes data from a few different studies over the years.

I have included a partial list of professions which comes from a list of over 4,000 professionals that reject water fluoridation. These people include dentists, doctors, nurses, chiropractors, etc.

A chemistry textbook is attached that discusses the controversy of water fluoridation.

I look forward to the meeting.
