Hello Amy,
I attached a few code of the ethics that are being violated when fluoridating water and below is my official statement.

Artificial water fluoridation was initially promoted and believed to be an important contributor in reducing tooth decay. More recent evidence shows that the benefits of fluoridation are grossly disproportionate to the potential for adverse effects such as arthritis, osteoporosis, asthma, heart disease, developmental neurotoxicity, bone cancer in boys, leukemia, thyroid disfunction, fluorosis or white spots on teeth, and kidney stones.

Fluoride doesn't just go to the teeth to make them stronger which also makes them more brittle. Brittle teeth break and need crowns which makes money for the for-profit dental industry. Fluoride kicks iodine to the side and is uptaken in the thyroid. It calcifies the teeth, joints, bones, pineal gland, and cartilage.

For over 60 years Madison has been listening to paid marketers and lobbyists from an industry that also says it is completely safe to use mercury for dental fillings. Mercury is one of the most toxic substances on the planet. My dentist can not extract my mercury filled tooth and send it through the mail in an envelope because it is too toxic. My kids

can not bring a mercury filled tooth to school in their pocket because it is too toxic. Yet I am supposed to believe that both mercury and fluoride are safe and beneficial in my body.

If a dentist has a patient that declines fluoride treatments and they treat them anyways this is called malpractice. They can be sued. Yet fluoride is added to the entire populations drinking water supply by water quality engineers without a medial license to prescribe drugs to prevent or cure tooth decay. Individual need, appropriate dose, efficiency and side effects are being ignored. The local health department does not monitor the population for adverse effects. There are no local hospitals checking blood serum, urine, or saliva for dangerous levels of fluroide. Anything used to cure or prevent a disease is considered a medication. I never gave my informed consent to ingest a corrosive hazardous waste product that isn't even a pharmaceutical grade substance that has never been FDA approved. A study was published earlier this year found the substances cities use for fluoridation are contaminated with arsenic, aluminum, and some batches with aluminum, arsenic, and lead. I have read the MSDS sheet on fluoride. The disclaimer on the MSDS sheet is priceless.

Madison Water Utility is not being truthful when stating on their water report stating the source of fluroide being from erosion of natural deposits; Added to promote strong teeth. Other cities state that it is a discharge from fertilizer and aluminum factories. Calcium fluoride is naturally occurring found in some ground water. Sodium fluoride is in toothpaste which states-Do Not Swallow. Hydrofluosilicic acid is hazardous waste and artificial.

Using a hazardous waste product that can't be released through the smoke stacks of industry because it cripples and sterilizes nearby animals and people is reckless. If it is so safe and effective then get the

FDA to approve it. The utility can't control the dose. What they put in the water is an estimate which depends on how many people are using the water at a given time.

There is not one single biological function in the human body that needs fluoride. There is no disease caused by the lack of fluoride.

The Milwaukee Sentinel published, May 29, 1957, “Every strong supporter of fluoridation is on the federal, state, or municipal payroll.”

Ontario Canada currently has a lawsuit filed by the concerned citizens of Peel who are suing for constitutional violations and violations to The Safe Drinking Water Act. At the end of August of this year, Israel halted the practice from the entire country because “fluoridation may harm pregnant women, people with thyroid problems and the elderly.” Dublin, Ireland halted it a few weeks ago. The EPA has fluoride on their list of developmental neurotoxins. It causes me distress to know that I am a superfund site for the dumping of hazardous waste from phosphate fertilizer and aluminum industry. I am a low income mother and it is extremely expensive and difficult for me to avoid artificial fluoridation.
