Re. Water Utility Board Meeting of October 28, 2014, Agenda item 4 (Legistar # 35934): I oppose all fluoridation of municipal water. There is ample historical evidence that sodium fluoride was introduced into municipal water as a way of dumping a waste product. It should also be abundantly clear that only calcium flouride, not sodium fluoride, can claim any health benefit. Moreover, it should be the choice of any water user to have, or not have, any additive substance not directly related to the potability of the water added to her or his municipal water.

Please enter this in the public record as a comment on the above-mentioned agenda item.

Thank you,
