Madison Water Utility
Madison, Wi 537—
(water@madisonwater.org)

Dear Sirs:
Although I do not reside in Madison, I am part owner of a shopping center on State St. and I am therefore a volume water customer. I object to the adulteration of the city water supply by fluoridation.
Fluoride is harmful, causing more goiter here in the goiter belt.
It is poisonous.
"medications like Prozak with three fluoride molecules that can boot out the thyroid's iodine" (from a section on goiter) By Sherry Rogers, MD, in the book DETOXIFY OR DIE.
According to the Environmental Protection Agency of the federal government, when Seattle, WA stopped fluoridating its water the level of ***lead*** in that water dropped by half. This is because when a water utility buys fluoride, dissolved lead comes right along with it. Lead is another poison. This was reported by Russell Blaylock, MD, in a critical section in one of his books.
Many tests have been performed, and these laboratories have repeatedly demontrated the damage that fluoridation does to teeth and bones.
At the discretion of the water committee I can provided a more extensive letter with more detail.
Thankyou for your kind attention in this matter, and may the health of WI citizens begin to improve rather than diminishing.
In the Name of the Lord God Jesus Christ,

Gary C. Witte
