Subject: fluoride meeting

Hello Amy Barrilleaux,

Is the review of the fluoridation program meeting open to the public? If it is what time does it start and where is the location?

I have attached the documents for the recent lawsuit in Peel Ontario, Canada where concerned citizens are suing their local water supplier for constitutional and Safe Drinking Water Act violations.

I also attached a study done in 2014 on contaminants in the substance used by most cities and ALL the samples collected CONTAINED ARSENIC, surprising amounts of ALUMINUM, and many contained lead and arsenic combined.

Israel halted their fluoridation program in August of this year. According to their Minister of Health, "fluoridation may harm pregnant women, people with thyroid problems and the elderly.'" http://www.newsweek.com/israel-has-officially-banned-fluoridation-its-drinking-water-267411

Dublin, Ireland halted their fluoridation program a little over a week ago and it is now being debated to halt all programs through the country of Ireland.

Does Madison use hydrofluosilicic acid to fluoridate the local water? Can I please get a copy of the MSDS for the product used by the city.

I recently contacted the EPA for toxicological information regarding hydrofluosilicic acid and pregnant women, infants, elderly, kidney patients, and diabetics. They replied stating the only information they have on the substance is that is disassociated in water. They have no toxicological information on this substance that is being used.

I contacted the FDA for information on fluoride and sodium fluoride supplements children are prescribed to chew and swallow. The FDA does not have any application or federal registration number for sodium fluoride tablets. Children have been chewing and swallowing these substances for decades and the FDA has no information on them.

There is no oversight to this program. The local health departments are not monitoring for adverse effects. People are being medicated with a waste product from phosphate fertilizer

and aluminum industry to prevent or treat tooth decay which is preventable with diet and hygiene. Governments and water suppliers are indiscriminately administering a drug to the population, without individual evaluation of need, appropriate dose, efficacy, or side effects. Individuals are not being asked for their consent and this violates individual liberty and rights. It is very expensive to invest in a filter system to remove fluoride and most filters do not remove it. Please halt the fluoridation program in Madison and promote clean water that is not contaminated with industry waste. Cargill makes hundreds of billions of dollars in profits each year and makes millions getting rid of this waste product. They have invested in marketing and lobbying groups such as the ADA. Please respect individual liberty and human rights to unwanted medication. Calcium fluoride is found naturally occurring in ground water. Sodium fluoride is a pharmaceutical grade fluoride found in toothpaste. Hydrofluosilicic acid is corrosive hazardous waste and does not belong in the water supply.

--
Thanks,
Brenda Staudenmaier
The Lovely Brenda
