Tree Canopy along the Causeway

EXISTING	PROPOSED
➢ Poor growing conditions = stunted growth	➢ Better growing conditions for all tree plantings = deeper, wider soil
➢ Within existing shoreline revetment (rocks)	➢ Terrace Support System under path for additional root space without heaving path
➢ Providing minimal shading to path users	➢ Tree Trenches to capture stormwater for street = passive irrigation, improved water quality
➢ Do not provide barrier between path & roadway	➢ Grove-style tree plantings for dense canopy
➢ Not optimal species	➢ Trees between path & roadway to provide barrier, slow vehicle traffic = urbanize corridor
