Hi Marsha,

I believe I live in Sheri Carter's District 14. But I saw the article about you wanting to revisit the research of how fluoride could affect young children and wanted to acknowledge you.

We can always get fluoride in mouth rinses inexpensively, but I'm pretty much a believer of keeping as much chemicals out of our drinking water as possible. And, not only do our larger bodies intake this water, what about our pets??? Their bodies cannot metabolize certain things like our can. We wonder why there is a larger numbers of both cats and dogs getting cancer tumors in the last few years but it should be of no surprise. I had to put my cat down about 5 years ago because she got a tumor. Later, I found out that all of the water in the house I lived in was softened, both hot and cold. So, she was drinking water softener salt and I didn't realize it. Anyway, just think of the damage fluoride could do in children and babies in the womb. The smaller the body, the less it can metabolize what we give them.

I just wanted to put my two cents worth in because I support what you are doing.

Thank you,
Melody Webster
