Hi Chris,

Just read your article:

[https://madison.com/wsj/news/local/health-med-fit/madison-water-utility-to-review-fluoridation-policy-rummel-questions-need-risks/article\\_a4631009-1e8c-5519-96a7-7150e1aaff53.html](https://madison.com/wsj/news/local/health-med-fit/madison-water-utility-to-review-fluoridation-policy-rummel-questions-need-risks/article_a4631009-1e8c-5519-96a7-7150e1aaff53.html)

I hope you do have a chance to do some of your own research into the matter.

Regarding the 2019 Health Department memo's about thyroid dysfunction:

*"An association has also been suggested between exposure to community water fluoridation and the incidence of hypothyroidism; a condition in which the thyroid gland doesn't produce a sufficient amount of hormones to function at a normal level<sup>33-35</sup>. This suggested association is inconsistent with the literature and not supported by subsequent investigation of this potential association<sup>34, 36 - 38</sup>."*

This is total nonsense. Inconsistent with the literature?

We have 180 studies listed here from the last 15 years. There are over 400 studies done on fluoride and thyroid between 1980 and 2020, and over 95% show damage show disturbances in thyroid hormone metabolism.

<https://poisonfluoride.com/phpBB3/viewtopic.php?f=7&t=1345>

SEE History:

[https://poisonfluoride.com/History/history\\_0.html](https://poisonfluoride.com/History/history_0.html)

Fluoride concentrations above 0.3 ppm in water have been shown to cause thyroid dysfunction.

Dentists like Johnson and the American Fluoridation Society can't produce ONE study done on water fluoridation and caries - that has actually accounted for established confounding factors - and can show that fluoride reduces caries.

Paul Melters asked Johnson this in 2013:

**Provide ONE scientific study that can show this effectiveness of water fluoridation, and which has accounted for established confounding factors such as race, gender, age, total intake, tooth eruption, brushing and other oral hygiene factors, socio-economic status, etc..**

**Reference:** \_\_\_\_\_

Johnson wasn't able to produce ONE study.

On the other hand, over half of all all children in the US now have dental fluorosis, a condition which predisposes to caries:

[https://poisonfluoride.com/Science/DF\\_More\\_Caries/df\\_more\\_caries.html](https://poisonfluoride.com/Science/DF_More_Caries/df_more_caries.html)

Best wishes to all,

Natalie Adderley
