To protect the environment and serve your neighborhood for years to come, Madison Metropolitan Sewerage District plans to insert a new lining into an 87-year-old sanitary sewer pipe running underneath Lake Mendota Drive. The project will take about a month to complete and will produce some noise, but less disruption than a complete rebuild. The Sept. 5 public hearing will be held on a noise variance to allow for the operation of pumping and other equipment between 7 p.m. and 7 a.m. until the work is completed.
