NEIGHBORHOOD PETITION OF SUPPORT to include

(Location Blk# & Street)

In the City of Madison's NEIGHBORHOOD TRAFFIC MANAGEMENT PROGRAM

Representatives of your neighborhood have requested the City Traffic Engineering Division to consider Neighborhood Traffic Management on your street. **To be considered and begin the process, at least 50% of the households within the project area** need to indicate their interest via this petition. By signing this form you are indicating your support and formally requesting to participate in the City of Madison's Neighborhood Traffic Management Program and understand that:

- The NTMP relies upon the use of physical devices such as *islands*, *traffic circles*, and *speed humps* etc. to control the negative behavior of traffic and improve neighborhood livability.
- The program requires a show of **resident support to be considered** for potential funding and **does not guarantee** a street will make the project list.
- Since resources for these projects are limited, a **ranking system** has been developed. If there is enough support to continue, your street will be ranked based upon the following criteria: Traffic Volume, %of Traffic Traveling 5mph over the Posted Speed Limit, Crashes, School Area, Pedestrian Area, School Walk Route, Bike Route.
- If a street does receive funding and makes it to the **project phase**, the **City will present the neighborhood with options** to install NTMP devices at locations based upon neighborhood input and engineering principles.
- A survey will be sent to a defined "survey area" based upon the affected area of the device(s) being proposed. Permanent construction of a NTMP device requires that 60% of the returned surveys support the device(s).

If you have questions regarding this petition or the Neighborhood Traffic Management Program, please contact Bryan Walker at 267-8754, or see Traffic Engineering's web page at <http://www.cityofmadison.com/trafficEngineering/programsTraffic.cfm>.

If there is enough support to continue, your street will be ranked based upon the following criteria: Traffic Volume, %of Traffic Traveling 5mph over the Posted Speed Limit, Crashes, School Area, Pedestrian Area, School Walk Route, Bike Route.
- If a street does receive funding and makes it to the **project phase**, the **City will present the neighborhood with options** to install NTMP devices at locations based upon neighborhood input and engineering principles.
- A survey will be sent to a defined "survey area" based upon the affected area of the device(s) being proposed. Permanent construction of a NTMP device requires that 60% of the returned surveys support the device(s).

If you have questions regarding this petition or the Neighborhood Traffic Management Program, please contact Bryan Walker at 267-8754, or see Traffic Engineering's web page at <http://www.cityofmadison.com/trafficEngineering/programsTraffic.cfm>.
