**Subject:** Contact Water Utility Board

**Message:**

Well 15 CAP members asked staff to explore the source of contamination and feasibility of containment. It is short-sighted to save a small amount of expense now because we cannot see exactly how it is related to future savings. If the contamination can be stopped, equipment can be used at another location. If technical issues prevent approving this expenditure, find another way to address our concerns. We realize the source may be a closed business and not a responsible party who could pay.

**The reporter can be contacted.**
