Re: 304 North Broom Street Et. Al. (See attached): Informational Presentation

The attached informational submittal packet for the Johnson & Broom Project, submitted on behalf of CS Acquisition Vehicle, LLC, outlines the initial design concepts for the redevelopment of a new student housing project located along Broom Street, Gorham Street, and Johnson Street. This project creates new student housing units with a range of bedroom & unit configurations and is designed to meet the standards of the UMX zoning district and Downtown Height Map; while offering much needed housing in the downtown area. Units within the project range in size from studios to 5 bedroom apartments. First floor townhome units with individual entrances along Broom and Johnson Street are also incorporated to activate the street frontages. Resident amenities are projected to include study rooms, fitness, and additional outdoor/indoor gathering spaces. Details of the amenities and rooftop open spaces are still being developed.

The revised informational submittal reflects the addition of the Johnson House/Laville parcels, adjustments based on City Staff comments, as well as application of the new downtown height /affordable housing ordinance allowance. The resulting design creates one building with two tower elements ranging in height from 7 stories (88') along Broom Street to 14 stories along Johnson and Gorham (capital height limit), consistent with the adopted ordinance. Affordable student housing is anticipated to be integrated into the project utilizing the Oliv model. The towers will be connected at the Broom Street floor with an enclosed
