

The attached photos were taken on a single trip down Williamson Street from the 800 block to the 1200 block.

The tape measure shows a 2 foot projection reflecting the proposed narrowing.

They are all taken on what is currently the 48 foot wide street area which is being proposed to be narrowed to 44 feet.

The existing street congestion, the high incidence of loading and unloading, and the potential narrow corridor for bicycles all demonstrate the potential danger of "dooring" for a person riding a bicycle if the street is narrowed as proposed.
