

## **Charge to PBMVC Sub-Committee to Address On and Off-Street Bicycle Facility Maintenance.**

*Proposed by PBMVC Member, Mike Rewey*

Approved at June 24, 2014 PBMVC Meeting

**Charge:** Develop a written street, path, bridge/tunnel and bicycle parking maintenance policy.

### **Strategy:**

- Find low hanging and cheap fruit for the winter of 2014-2015
- Tackle the hard part first - Winter: Policy should include timeliness, level of service for bike lanes, paths, and select local street bike routes (such as Kendall Street, Olin- Turville Park and East Wilson Street) and snow removal at all public bicycle racks. The detail for plowing should be published in map format on the city's website so that the public knows what to expect for trip planning and requests for changes. There should also be a "one-stop" phone number for all city related issues that is published on the city web site (that would correspond to "report a problem" on the website) and signed at select locations so that bicyclists may immediately report problems.
- Tackle the easy part last - General or Routine: Policy should include surface and joint repair, glass & debris pickup, frequency of service, and maintenance of bicycle racks and removal of abandoned bicycles and bicycle parts, maintenance of signs and markings, and trimming of trees.
