Mag lock systems

The locking systems we install consist of magnetic locks, backup power and a control panel. The maglocks operate via wireless key fobs for locking and unlocking. For additional safety, we also install wireless smoke alarms in the bedrooms and the family room & wireless heat detectors in the kitchen. When activated by smoke or heat these devices also unlock the mag locks and sound an audible alarm.

Upon completion of an installation, we perform a complete system test. Every device is activated to verify the magnetic locks immediately disengage.

We suggest that you schedule an annual inspection and test with us to verify the system remains in proper working order, as per Madison Fire Department code.

Please feel free to contact me with any further questions or concerns.

Sincerely,

Jeff Beckmann
