CDBG Block Grant Application

VO 24813 State of Wisconsin Financial Institutions filing number: Vegan Haven Central, Inc. amount requested: Pending. EIN (temporarily misplaced).

I cannot ask for all of the money I want to today, but I want to get things started. I hope that there is enough substance in this email, to get this much looked at. I have time every day to complete the amounts requests. This is so very large and important, that it is difficult to get as much done in one day as i would like, or to include all of everything on one application. I will continue to work diligently, to provide details, but I wat to be able to appoy for these two addresses, 402 east Washington Avenue, for our offices, and 408 East Washington Avenue, for our natural foods and cleaning supplies gorcery store. I am sending this through, so that it will get to the nearest conference taht can look at it. I apologize for it's incmpoletness, but, without an office, and a payment option, my day is filled with choices, and I cannot work as diligently at any one particular project, but have things organizing to that degree. It's simply too much work to work on and either have stolen/lost because I live outside, or to work on entirely to it's most detailed completion, and then be told no, etc. I need a bite to work off of.

A). A Homeless Assistance and Environmental Policy work station office, by Vegan Haven Central, Inc.

We will be providing the office location for emergency homeless assistances, shelter overcapacity options, day sheltering for job trainaing and assistance for persons living their lives while enduring the crisis of homelessness. I anticipate attachments of more applications, for the purchase of the properties at 901 E. Washington Avenue, through the entire block, for actual jobs availability, and, the day shelter and job search office. Adding to this, the placement of transitional housing, for the purpose of housing/job retraining, for persons who are suffering from chronic homelessness.

One clear Job opportunity in that block, is "Madison Coach Service", which is at this point, a plan, to bring in a one-stop, Long Range Bus Hub, serving all of the Madison's coach needs. Anothr is a leaf paper company. All of our jobs will highlight going green and cruelty free.

The Environmental Policy work station office part of the Vegan Haven Central Inc. location, will be working to reduce and eliminate, as much as possible, all of our environmental problems, so that the health and welfare of our community is a priority. We will, as well, invite commitment from entities outside of our organization(s), in cooperative efforts for peace and health. My strategy is to bring proof of the various problems, my solutions, and a plan of implimentation. This involves restructuring, so to bring in local, bulk, quality and cruelty free, merchandizing.

To this regard, I'd like to see several small, walk-to, natural and health foods grocery stores. Natural cleaning fluids are an important inclusion to our

encouragements with people now too. Our waterways are suffering from neglect to this issue, and this is one small part that can pay a large role in relieving us from this problem.

I have one large project I want to explain here, which is an environmental proof project. I plan to start the option of urban farming, including the use of agricultural animals. I view the emotional healing opportunity to people, as well as the constant eye of the public ensuring that animals are treated fairly and humanely, as two achievable goals. I have developed plans for space requirements, habitat and care instructions, and enforcement, to ensure that other animals are given the best possible care, and availability to recover from abuse by human error, as possible, while still making contributions. They can be caused to more humanely, provide milk, eggs, wool, chicken meat, and, live animals to use for travel, and for pets/accomodating the disabled. Human/all animal attachment, a huge absence from our social culture, presently.

This next subject will be shocking, and blatently to the point, so please be forwarned and brace yourselves.

I have even developed a more humane slaughtering method, for situations where animals lives will be taken for food and for thier needed skins. Imention it now, so that it is a more humane slaughtering methoed can be a known goal, with a n extremely worthy outcome. My slaughtering method is to reduce to a slice to the neck of the animal, fish, or bird, by a curved blade, so as to inflict bleeding, and to let lie on one side next, and an adequate period of time to die in, so as an ethical, moral and acceptable death to the animal can be achieved, instead of the bolt-thrust method that is currently used, theoreticly to "stun" the animal, to theoretically reduce the pain of what ever is done after. (I've seen some horrifying footage of the different slaughtering methods available to armers these days. Now, a problem of agrucultural santiation has caused a business of making clothing out of animal fibers, which is unethical too. but, it appears, to them, to be their only solution in maintaining their business, to their econimically inferior business habits. (They've become too greedy and defaultive of mannerisims that look to help the problem, instead. I theorize that the problem is of ectoplasmic runoff on slaughtering farms, and that that may be the cause of undergroaund water being affected. I further theorizxe that this is caused by a development of animal soul transformation related deliterium, their having endured this blunt force stun, too many times over, life after soul transformed life. Having succumbed to this effect so many times, over and over, until they never fully recover during life. A sad reality of life that I have only recently been able to develop to myself. certainly, there is probable cause for the establishing of the term: after slaughter ectoplasmic runnoff, and that that being a correctable agricultural sanitation problem. Simply put, their souls are no longer able to move out, they've become too disoriented, and this is to a point of unethical. I would not bring up the problem without a solution. We all care deeply for our animals. We need the best for them, the emotional factors alone should be enough to get this project going.

But that is not all there is to this. There is also phosphorus elements in the soil. We humans are suffering stress to the point of our internal bleeding affecting the soil. Other animals are suffering stress, too, but this is one giant step toward our final happiness goals.

Happier humans, and happier animals, can go a long way.

The subject of soil increments, of happy, healthy and emotionally sound agricultural animals, is one good reason I want to prove, that happy, (emotional human to animal contact-acclimated), natural, (no shots) and familiarized (animals given a chance to raise their own families in a farm setting) are important facets to human emotional health, farming techniques, and our economy. That a variety of "happy" animals' soil increments will make healthier underground insects and worms, healthier soil and roots, and so, healthier crops. Healthier crops mean better nutrition, as well as a longer shelf life for the end product of our new superior organic foods, and will leave better opportunity for drying for winter storage, which is an energy saver. Even our water quality could improve, by causing healthier underground life, keeping an eye on soil sampling to establish and ensure that overpopulating our urban farm areas will not occur so as to affect our city water supply at any point. This problem will be relieved, by either moving out to more urban farm properties, or selling to farms or others, for other live uses. Another big addition to this purpose, is that by proving better nutrition and better health, a new establishment upon food safety, may be established with our new superior foods, and we could, effectively and legally, eliminate inferior agricultural habits and growing techniques. An expected outcome that is outside of most people's dreams. Healthy food for all people, at a reasonable price.

Costs:

This project will develop and work out of the 402 East Washington Avenue office. There will be a supplemental application for properties, tools, animals, certifications, feed and other habitat-related materials, including fencing, and other protective structures and bedding. Money for soil sampling, scientific explanations, for meetings materials and for court actions, for proof, compliance meetings, and enforcement toward becoming a governmental agency, will be asked for, to give this project its ultimate purpose: Bringing the people the healthiest food that Wisconsin can grow, by all growers. So far as paying for employees at urban farms, this could be a work-exchange opportunity in partnership with the college, or at the very least, only one paid employee per shift at each site, so that volunteering can be supervised.

Although I have not approached any State agencies for monies, I doubt that finding matching funds will be a problem. I just need some commitment, to get this ball rolling, and it takes time, a facility to work out of, materials to bring and present to boards to ask for permissions and for monies, and the dedication and concise expectations that a paycheck can bring. I am stopping here, so that I can transmit something

Payroll information: An office manager/researcher, for 3 -8 hour shifts, by \$10.00 per hour = \$240.00 per day.

Rent, plus security deposit, is $\$800.00 \times 2 = \$1,600$ for the first month and \$800.00 per month thereafter, plus an average of \$75.00 per month for utilities. Totaling \$1,675.00 for the first month, and \$875.00 per month thereafter.

Supplies:

Office furniture:

- 2 desks \$_____one time only
- 2 office chairs \$_____ one time only
- 2 computer workstations \$_____one time only
- 1 conference table, with 12 chairs \$_____one time only
- 1 large file cabinet \$_____one time only
- 1 printer \$_____one time only
- 1 fax machine \$_____one time only
- 1 micro wave oven and/or toaster oven \$_____one time only
- Office machine upkeep/repair \$_____every six months
- Cleaning supplies/consumable items \$_____per month
- Paper and other miscellenous office supplies: start up \$_____one time only
- Paper and other miscellenous office supplies: concurrent \$_____per month

B).

Natural Groceries Etcetra: Grocery Store at 408 East Washington Avenue:

Payroll Information: Open Hours 6:00a.m. to 10:00 p.m.= 2 -8 hour shifts (x2); by \$10.00 per hour, = \$320.00 per day for payroll.

Rent plus security deposit is \$750.00, (x2) = \$1,500 to open, and \$750.00 per month for rent, plus utilities, approximating \$150.00 each month. Total for building costs = \$1,650.00 to open, and \$900.00 per month for total building costs.

Furniture: shelving

refrigeration (2) one overflow for 204 East Washington Avenue.

freezers (2) one overflow for 204 East Washington Avenue.

cleaning supplies; one month's worth

packaging materials.

a locking file cabinet, office supplies, and a cash register.

cashier and co-worker chairs

purchase existing cashier desk

2 large storage cabinets.

miscellaneous window display decorations.

insurance

security camera costs

Matching Funds Options:

Both of these projects are qualifiable for other federal, state and local grants. After this, there is the opportunity of my receiving a business loan, to get these things going. Adding to this, are these other opportunities: advertising on the web for tax deductible donations, holding fund raising events both for private parties and for public events, and, applying directly for monies from private foundations, including colleges and other applicable foundations. Economically speaking, it's a long road to include the colleges at this time on my plan, but it has to start somewhere, and including them on desires to use their money, will get things moving faster, and toward a better direction.

Other possible sign-ons:

I am taking the initial responsibility for these projects. I thought them up through my own life experiences, developed the plans, and write the directives. I plan to have a board, but do not yet have the cooperation and time commitments of other people, but that is close. I have had verbal agreements by these other non-profit organizations, that are also into homeless services and environmentalism:

Occupy Madison, by Allen Barkoff, and Brenda Konkel.

Shine 608, by Z Haukness and Sarah Gillmore.

Sanctuary, by Ronnie Barbett and Uly Williams.

I haven't had direct involvement promises from these next organizations, but have associated involvement:

Dane County Human Services, Lynn Green; Our Madison City Council, Porchlight, Community Action Coalition, and several other City of Madison, Dane County, and State of Wisconsin meetings personnel/activists.
