

Overture Center Garage Screening Notes

The Overture Center garage Screening project will provide fall protection around the perimeter of the top level and openings in the lower levels down to 60' above the adjacent grade. This is to reduce the potential for fatal falls from the facility.

An average of about two fatal falls from City parking facilities occur annually, with the Overture Center garage being one of the facilities where this occurs most frequently.

The screening would be an open black mesh, presenting little visual obstruction. The photo below is of this material on the Exact Sciences garage on Forward Drive.

Estimated cost is \$267,000 paid through Parking Utility reserves.
