How to mount your Little Free Library

Materials

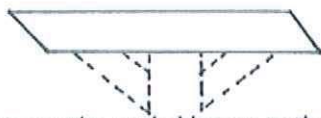

- 8 feet - 4"x4" post
- 2 feet - 2"x6" piece of wood
- 6 - 2 1/2" lag screws
- 3" exterior lag screws
- 3" lag bolts

1. To start, you will need an 8 foot 4" x4" treated post. Any kind will work, but Cedar tone is our favorite.
2. Cut the post 5 feet long.
3. With the remaining piece, make side angle braces. Cut each piece 10 1/4 inch long and cut 45 degree angles on the ends.

4. Cut a platform as wide as the LittleFreeLibrary out of the 2" x 6" piece of wood.

5. Mount the angled braces to the 5 foot post with 3" exterior lag screws. You should use 3" lag bolts to enhance the holding power. Attach to the 2" by 6" platform. Pre drilling a slightly smaller hole will make it easier to install the lag bolt.
6. Dig a 24" deep hole and install the post. Make sure to use a level and tamp the dirt hard with a shovel to secure the post.
7. Drill 6 holes through the top of the LittleFreeLibrary. The holes need to match up with the post platform. Use the 6 - 2 1/2" lag screws to attach the platform to the library.
8. You are done! Now take a picture of you and your friends by your LittleFreeLibrary and register it via our website: www.littlefreelibrary.org. Go to the contacts section to find registration.
9. Build another LittleFreeLibrary. People always say, you can't just build one!
