26 September 2003

Dear Mr. Winter:

I am writing you to follow up on our conversation about installing a speed bump on the 1200 block of E. Mifflin Street. As you know, our street is being torn up right now for sewer and water main replacement. Because our street will be repaved, now is a very cost-effective time to add a speed bump.

The reason for some sort of traffic control device on our block has become even more clear now that it is "closed." Even though Mifflin Street is barricaded at each cross street and is riddled with huge holes, there is still a steady stream of traffic driving by. It is obvious that the majority of traffic is passing through, avoiding the traffic lights on Baldwin Street.

When I went to obtain the signatures on the attached petitions, I ran into only one person who was unwilling to sign. (She refused even to come to the door, stating that she did not respond to surveys.) Obviously our neighborhood feels that more traffic control is needed on our block.

I respectfully request that your department address our neighborhood's need for additional traffic control.

Sincerely,

Handwritten signature of Bob Klebba.

Bob Klebba

Petition OK.
NC 10/7/03

The 1200 block of East Mifflin Street is increasingly being used as a shortcut to and from North Baldwin Street and is experiencing a high load of traffic that should be directed to East Washington Avenue. This traffic load is excessive for a local street and it decreases neighborhood livability. In addition, much of this traffic is observed traveling at excessive speed, presenting a safety hazard. Stop signs at each end of the block do not inhibit this traffic and the neighborhood cannot rely on police enforcement.

We would like to request that the City employ an additional traffic management device on our block such as a speed hump. We feel that this mechanism will decrease the automobile traffic making shortcuts, increase bicycle traffic and improve our neighborhood without any impact to safety services.
