Hi Rob,

I talked with the Town of Middleton and they said I should drop a line to you. For this summer's road construction project wanted to see if you have knowledge of the standing water issue? This is at the intersection of Aspen Grove Road and Blackhawk Rd. After each heavy rain or snow melt a very large amount of standing water will gather just off the side of the road. It is a safety issue when you drive over the water needless to say. Wanted to see if a culvert is going to be used or if a plan is place. We live just down 1/2 mile on Blackstone Ct. Thanks so much.

Subject: RE: More blackhawk questions

There are a couple of gaps in the sidewalk and we will not be installing sidewalk at either location. We will not be modifying the old style ramps, leave as is. Thanks, Christy

Subject: More blackhawk questions

sorry to keep bothering you on this....but as I'm going thru this I had some questions regarding sidewalk...

there is city sidewalk all along the blackhawk subdivision but for reasons unknown it ends at Aspen Grove Ln. I can only assume it's due to some dense trees in the terrace/ditch area....The sidewalk then picks up further to the west with a sidewalk easement and goes back out onto Blackhawk Rd. Are we going to fill in the gap here? I know you said no sidewalk in this project but thought I should ask.

My second question is the curb ramps - they are the old style. Do we need to update these with this project or are they considered out of the scope?
