INTRODUCTION

Your plan's Investment Policy Statement (IPS) requires monitoring of the plan's investments to ensure that the investments are appropriate for the plan and its participants. In your Investment Policy Statement, standards and criteria have been established for purposes of monitoring plan investments.

This Investment Report is intended to assist you in meeting your monitoring obligation. The report includes a Monitoring Report and a Performance Report. The Monitoring Report displays all of the plan's investments alphabetically by asset class. Each investment displays the standards and criteria specified in the IPS and how the investment has performed with respect to those criteria over the current and seven previous periods.

INVESTMENT REPORT

CITY OF MADISON 457 DEFERRED COMPENSATION PLAN
FOR PERIOD ENDING 31 MARCH 2013

HOW TO USE THIS REPORT: MONITORING REPORT SAMPLE

Investment		Monitor Score	Monitor History								
ABC Growth Fund (I)		87	Monitor History								
Fund Category: Large Growth		Standards	Criteria	Q1 2008	Q4 2007	Q3 2007	Q2 2007	Q1 2007	Q4 2006	Q3 2006	Q2 2006
Notes: The investment committee decided (3/31/2008) that this fund required special attention since the fund's long-time manager was recently replaced. Even though manager tenure is not an IPS standard, we want to watch this fund given the comparative inexperience of the new management team.		Total Return 1 year	Top 20%	28%	26%	18%	17%	17%	13%	14%	9%
		Total Return 3 year	Top 10%	9%	9%	8%	8%	8%	6%	7%	5%
		Standard Deviation 3 year	Lowest 20%	24%	18%	26%	16%	17%	14%	13%	16%
		Sharpe Ratio	Top 20%	19%	16%	25%	19%	14%	18%	19%	19%
		Expense Ratio	Lowest 10%	9%	18%	7%	9%	10%	8%	9%	11%
		Total Assets	\$500 million plus	\$1,222KK	\$1,206KK	\$1,156KK	\$1,029KK	\$932KK	\$900KK	\$872KK	\$750KK
		Morningstar Rating	4 stars	3 stars	4 stars	4 stars	4 stars	4 stars	4 stars	4 stars	4 stars
		Investment Note Investment committee decisions and comments concerning an investment made during the previous committee meeting.		Standards Each standard identified in the investment policy statement for purposes of monitoring an investment is listed.		Criteria The IPS expectation with respect to how an investment ranks within its asset class for each selected standard.		Period Highlight Indicates where an investment has underperformed a selected standard/criteria pair for the current period.			

INVESTMENT REPORT

CITY OF MADISON
CITY OF MADISON 457 DEFERRED COMPENSATION
PLAN
FOR PERIOD ENDING 31 MARCH 2013

The Monitoring Report identifies investments that may merit your attention in three ways:

1. Period Highlight — Where an investment underperforms a standard/criteria in a particular time period, that period is highlighted in blue. For example, if your IPS specifies that an investment have a Morningstar rank of 4 stars and the investment has a 3 star rank for the most recent period, that period is highlighted in blue.

This approach is implemented for all time periods and standards. Investments that warrant attention are readily identifiable.

2. Monitor Score — The score is based on the weights assigned to each standard and reporting period item (see following page for actual weight values). The score is a percentage calculated using the sum of the weights of the standards that meet the specified criteria over the total sum of all the weights.

For some standards/periods, data may not be available. This report is configured to not include these items in the calculation of the score.

Based on the calculated investment score, each investment will be classified using the following table

	Score	Description
	0 to 64	 Watch
	65 or greater	 Pass

3. Investment Note — The Monitor Report includes notes from previous investment reviews you have conducted and recorded. An investment may or may not have a note attached, based on your own prior decisions. The notes enable you to call attention to considerations about an investment that may be independent of the standards and criteria specified in the IPS.

The Performance Report provides additional detail concerning your plan's investments. It includes in-depth performance information for each investment and its benchmark, as well as risk/expense and other data.

Notes

This grid provides a visual representation of the categories covered by the plan's investments. For domestic equity funds, the vertical axis shows the market capitalization of the fund's investments, and the horizontal axis shows the investment style. For domestic fixed income funds, the vertical axis shows the average credit quality of the bonds owned, and the horizontal axis shows interest rate sensitivity as measured by a bond's duration. Global, foreign, and specialty equity funds, as well as global fixed income funds, are also represented in the category grid. Three "Other" categories are displayed to distinguish balanced, target and cash investment types.

Category assignment is based on information provided by Morningstar, your plan representative, or other sources, and may not always be consistent with information provided in the fund's prospectus.

DEFINITIONS

Alpha is a measure of the difference between a portfolio's actual returns and its expected performance, given its level of risk as measured by beta. A positive alpha figure indicates the portfolio has performed better than its beta would predict. In contrast, a negative alpha indicates the portfolio has underperformed, given the expectations established by beta.

Asset Classes are the broad groupings of similar Morningstar categories and include Stock, Bond, Blended, and Cash/Stable Value.

Average Market Capitalization – Morningstar defines the overall "size" of a stock fund's portfolio as the geometric mean of the market capitalization for all of the stocks it owns. It's calculated by raising the market capitalization of each stock to a power equal to that stock's stake in the portfolio. The resulting numbers are multiplied together to produce the geometric mean of the market caps of the stocks in the portfolio, which is reported as average market capitalization. This number is different from the fund's median market cap—the capitalization of the median stock in its portfolio. The geometric mean better identifies the portfolio's "center of gravity." That is, it provides more accurate insight into how market trends (as defined by capitalization) might affect the portfolio.

Benchmark is the index against which funds within a category are compared.

Beta is a measure of a fund's sensitivity to market movements. The beta of the market is 1.00 by definition. Morningstar calculates beta by comparing a fund's excess return over Treasury bills to the market's excess return over Treasury bills, so a beta of 1.10 shows that the fund has performed 10% better than its benchmark index in up markets and 10% worse in down markets, assuming all other factors remain constant. Conversely, a beta of 0.85 indicates that the fund's excess return is expected to perform 15% worse than the market's excess return during up markets and 15% better during down markets.

Category identifies funds based on their actual investment styles as measured by their underlying portfolio holdings over the past three years. If the fund is new and has no portfolio, Morningstar estimates where the Fund will fall before assigning a more permanent category. When necessary, Morningstar may change a category assignment based on current information.

Category Average provides the simple average of all fund returns within a particular Morningstar category.

Expense Ratio is the percentage of fund assets paid for operating expenses and management fees, including 12b-1 fees, administrative fees, and all other asset-based costs incurred by the fund, except brokerage costs. Fund expenses are reflected in the fund's net asset value (NAV). Sales charges are not included in the expense ratio. The net expense ratio reflects the expenses currently being charged by a fund, taking into account any applicable expense and fee waivers. The gross expense ratio does not reflect any fee or expense waivers that may be in effect.

Information Ratio is a risk-adjusted performance measure and excess return and risk relative to a specific benchmark index.

Manager Tenure indicates the period of time the lead manager has been managing the fund portfolio. For funds without a lead manager, tenure of the manager who has been with the fund the longest is reported. In the case of multiple lead managers, the tenure of the lead manager with the longest tenure is reported.

Morningstar Risk is an assessment of the variations in a fund's monthly returns, with an emphasis on downward variation. It is calculated as the difference between Morningstar Return and Morningstar Risk-Adjusted Return. It is similar to standard deviation; the key difference is that standard deviation gives the same weight to upside and downside variation. Funds are ranked within their categories.

DEFINITIONS

Peers include all of the funds that comprise a Morningstar category.

R-squared reflects the percentage of a fund's movements that can be explained by movements in its benchmark index. An R-squared of 100 indicates that all movements of a fund can be explained by movements in the index. Thus, index funds that invest only in S&P 500 stocks will have an R-squared very close to 100. Conversely, a low R-squared indicates that very few of the fund's movements can be explained by movements in its benchmark index. An R-squared measure of 35, for example, means that only 35% of the fund's movements can be explained by movements in the benchmark index.

Rankings — returns and statistics for each fund are ranked relative to the returns and statistics for all other funds in each category.

Sharpe Ratio is a risk-adjusted measure developed by Nobel Laureate William Sharpe. It is calculated by using standard deviation and excess return to determine reward per unit of risk. The higher the Sharpe Ratio, the better the portfolio's historical risk-adjusted performance. It can be used to compare two portfolios directly on how much excess return each portfolio achieved for a certain level of risk.

Sortino Ratio is similar to the Sharpe Ratio except it uses downside risk (downside deviation) in the denominator. Since upside variability is not necessary undesirable, the Sortino ratio is sometimes preferable to a Sharpe ratio. It measures the annualized rate of return for a given level of downside risk.

Standard Deviation is the statistical measurement of dispersion about an average, which depicts how widely a stock or portfolio's returns varied over a certain period of time. Investors use the standard deviation of historical performance to try to predict the range of returns that is most likely for a given investment. When a stock or portfolio has a high standard deviation, the predicted range of performance is wide, implying greater volatility.

Style Drift Score is the number of times the Morningstar category for a fund has changed during the previous 36 months. This number includes Morningstar changes due to changes in fund composition and administrative changes that occur when Morningstar adds, removes, or modifies a category.

Total Return is determined each month by taking the change in monthly net asset value, reinvesting all income and capital gains distributions during that month, and dividing by the starting net asset value. Reinvestments are made using the actual reinvestment net asset value, and daily payoffs are reinvested monthly. Morningstar does not adjust total returns for sales charges. Total return does account for management, administrative, 12b-1 fees and other costs taken out of fund assets. Returns for periods longer than one year are expressed as annualized returns.

Treynor Ratio is a measurement of the returns earned in excess of that which could have been earned on a riskless investment (i.e. Treasury Bill) per each unit of market risk assumed. The Treynor ratio (sometimes called reward-to-volatility ratio) relates excess return over the risk-free rate to the additional risk taken; however systematic risk instead of total risk is used. The higher the Treynor ratio, the better the performance under analysis.

Turnover Ratio is a measure of the fund's trading activity which is computed by taking the lesser of purchases or sales (excluding all securities with maturities of less than one year) and dividing by average monthly net assets. A turnover ratio of 100% or more does not necessarily suggest that all securities in the portfolio have been traded. In practical terms, the resulting percentage loosely represents the percentage of the portfolio's holdings that have changed over the past year.

CATEGORIES

Morningstar categories identify funds based on their actual investment styles as measured by their underlying portfolio holdings over a three-year period. If a fund does not have a portfolio history, Morningstar originally estimates its category identification before giving it a more permanent category assignment. Morningstar defines the driving principles behind its category classification system as:

- Individual portfolios within a category invest in similar types of securities and, therefore, share the same risk factors,
- Individual portfolios within a category can, in general, be expected to behave more similarly to one another than to portfolios outside the category,
- The aggregate performance of different categories differs materially over time,
- Categories have enough constituents to form the basis for reasonable peer group comparisons, and
- The distinctions between categories are meaningful to investors and assist in their pursuit of investing goals.

STOCK FUNDS

Funds that primarily invest in U.S. stocks and other equity securities are generally subdivided based on market capitalization and position on the growth-value spectrum, but also include specialty funds that invest predominantly in one market sector.

Market Capitalization:

- **Large-Cap Funds** invest primarily in companies that rank in the top 70% of the capitalization of the U.S. equity market.
- **Mid-Cap Funds** focus on medium-size companies or own a mix of small-, mid- and large-cap stocks. The mid-cap range for market capitalization typically falls between \$1 billion and \$8 billion and represents 20% of the capitalization of the U.S. equity market.
- **Small-Cap Funds** invest primarily in companies that rank in the bottom 10% of the capitalization of the U.S. equity market.

Growth-Value Spectrum:

Funds are assigned an overall style through an asset-weighted average of the value/growth scores of the stocks in the portfolio.

- **Value Funds** include a predominance of stocks with low valuations (low price ratios and high dividend yields) and slow growth (low growth rates for earnings, sales, book value, and cash flow).
- **Blend Funds** hold portfolios in which neither growth nor value characteristics predominate.
- **Growth Funds** include a predominance of stocks with fast growth measures (high growth rates for earnings, sales, book value, and cash flow) and high valuations (high price ratios and low dividend yields).

CATEGORIES

STOCK FUNDS (cont.)

International Funds

International Stock Funds that do not specialize in particular regions are categorized as Foreign Funds and further classified according to market capitalization and value/growth characteristics:

- **Foreign Large Funds** primarily invest in stocks that have market caps in the top 70% of each economically integrated market (such as Europe or Asia ex-Japan). Most of these portfolios divide their assets among a dozen or more developed markets, including Japan, Britain, France, and Germany. These portfolios typically have less than 20% of assets invested in U.S. stocks.
- **Foreign Small/Mid Funds** primarily invest in stocks that fall in the bottom 30% of each economically integrated market (such as Europe or Asia ex-Japan). These portfolios typically will have less than 20% of assets invested in U.S. stocks.

Foreign Large Funds may be classified as value, blend or growth funds, while Foreign Small/Mid Funds are categorized as either growth or value funds:

- **Value funds** primarily hold stocks with low valuations (low price ratios and high dividend yields) and slow growth (low growth rates for earnings, sales, book value, and cash flow).
- **Blend funds** hold portfolios in which neither growth nor value characteristics predominate.
- **Growth funds** primarily hold stocks with fast growth measures (high growth rates for earnings, sales, book value, and cash flow) and high valuations (high price ratios and low dividend yields).

More specialized international equity funds include:

- **Europe Stock Funds** invest at least 70% of total assets in equities and at least 75% of stocks in Europe. Many of these funds emphasize the region's larger and more developed markets, including Britain, the Netherlands, Germany, France, and Switzerland. Many also invest in the region's smaller markets, including the emerging markets of eastern Europe.
- **Latin America Stock Funds** invest at least 70% of total assets in equities and invest at least 75% of stock assets in Latin America. Most of these funds strongly favor the area's large markets, specifically Brazil, Mexico, and Argentina. Smaller markets such as Peru or Columbia generally aren't as well represented in these funds.
- **China Region Funds** invest at least 70% of total assets in equities and invest at least 75% of stock assets in one specific region or a combination of China, Taiwan, and/or Hong Kong.
- **India Equity Funds** invest at least 70% of total assets in equities and invest at least 75% of stock assets in India.
- **Diversified Emerging Markets Funds** invest at least 70% of total assets in equities and invest at least 50% of stock assets in emerging markets. These funds tend to divide their assets among 20 or more nations, although they tend to focus on the emerging markets of Asia and Latin America rather than on those of the Middle East, Africa, or Europe.
- **Diversified Pacific/Asia Funds** invest at least 70% of total assets in equities and invest at least 75% of stock assets in Pacific countries, including at least 10% in Japan. These funds have a wider investment range than other Asia-oriented portfolios. These funds can invest throughout the Pacific Rim, including Australia and New Zealand. As a result, country weightings for these portfolios vary tremendously, though most retain some exposure to Japan and Hong Kong.

CATEGORIES

STOCK FUNDS (cont.)

- **Pacific/Asia (ex Japan) Stock Funds** invest at least 70% of total assets in equities and at least 75% of stock assets in Pacific countries, with less than 10% in Japan. Most of these funds focus on export-oriented nations such as Hong Kong, Singapore, Taiwan, and Korea.
- **Japan Stock Funds** invest at least 70% of total assets in equities and at least 75% of stock assets in Japan. The Japanese stock market is one of the largest in the world, so Japan Stock Funds holdings vary significantly. Some funds concentrate on Japan's larger companies, while others concentrate on smaller firms.
- **World Stock Funds** have few geographical limitations. It is common for these funds to invest the majority of their assets in the U.S., Europe, and Japan, with the remainder divided among the globe's smaller markets. These funds typically have 20%-60% of assets in U.S. stocks.
- **Global Real Estate Funds** invest primarily in non-U.S. real estate securities, but may also invest in U.S. real estate securities. These portfolios may include debt & equity securities, convertible securities, and securities issued by real estate investment trust and REIT-like entities and by real estate operating companies.
- **Miscellaneous Region** stock portfolios invest in countries or smaller regions that do not have their own category. They typically have a narrow geographical range.

Sector Funds:

Sector Funds invest primarily in stocks of companies within a specific sector of the market and are classified by their stated investment objective. Covered sectors include: Communications, Financial, Health, Natural Resources, Real Estate, Technology, Utilities, Consumer Cyclical, Consumer Defensive, Industrials, and Miscellaneous Sectors.

Alternative Funds:

Long-Short Funds include funds that hold sizable stakes in both long and short positions in equity and debt securities and related futures. Some of these portfolios are market neutral, which means that they divide their exposure equally between long and short positions in an attempt to earn a modest return that is not tied to the market's fortunes. Other portfolios that are not market neutral will shift their exposure to long and short positions depending upon their macro outlook or the opportunities they uncover through research. Alternative funds also include precious metals portfolios that focus on mining stocks. Covered strategies include Bear Market, Single Currency, Multicurrency, Long/Short Equity, Market Neutral, Multialternative, Managed Futures, Volatility and Equity Precious Metals.

Commodity Funds invest primarily in equity securities and related derivatives of various commodity markets. Covered markets include: Agriculture, Broad Basket, Energy, Industrial Metals, Miscellaneous, and Precious Metals.

Trading Funds seek returns that are equal to a fixed multiple of the short-term returns of an equity, debt, or commodity index. Trading Funds are designed for active traders and are not suitable for long-term investors. Covered strategies include Trading-Leveraged Commodities, Debt, and Equity; Trading-Inverse Commodities, Debt, and Equity; and Trading-Miscellaneous.

CATEGORIES

BLENDING FUNDS

Blended (Balanced) Funds usually provide a blend of capital appreciation and income by investing in a combination of stocks, bonds, and cash. Blended funds also include Target-Date and Lifestyle Funds.

- **Conservative Allocation Funds** invest in stocks, bonds, and cash, and tend to hold smaller positions in stocks than Moderate Allocation Funds. These funds typically have 20% to 50% of assets in equities and 50% to 80% of assets in fixed income and cash.
- **Moderate Allocation Funds** invest in stocks, bonds, and cash, and tend to hold larger positions in stocks than Conservative Allocation Funds. These funds typically have 50% to 70% of assets in equities and the remainder in fixed income and cash.
- **Aggressive Allocation Funds** invest in stocks, bond, and cash, and tend to hold larger positions in stocks than Moderate Allocation Funds. These funds typically have 70% to 80% of assets in equities and the remainder in fixed income and cash.
- **World Allocation Funds** invest in stocks, bonds, and cash. While World Allocation Funds explore the whole world, most focus on the U.S., Canada, Japan, and the larger markets in Europe. These funds typically have at least 10% of assets in bonds, less than 70% of assets in stocks, and at least 40% of assets in non-U.S. stocks or bonds.

Target-Date Funds provide a diversified exposure to stocks, bonds, and cash for those investors who have a specific date in mind for retirement or another goal. These funds aim to provide investors with an optimal level of return and risk, based solely on the target date. Over time, management adjusts the allocation among asset classes to more conservative mixes as the target date approaches.

Convertible Funds are designed to offer some of the capital-appreciation potential of stock funds while also supplying some of the safety and yield of bond funds. To do so, they focus on convertible bonds and convertible preferred stocks. Convertible bonds allow investors to convert the bonds into shares of stock, usually at a preset price. These securities thus act a bit like stocks and a bit like bonds.

BOND FUNDS

Bond Funds invest primarily in fixed-income securities.

Government Funds have at least 90% of their bond holdings invested in bonds backed by the U.S. government or by government-linked agencies. and are further divided by duration:

- **Long Funds** invest in securities with a duration of greater than 6 years or (if duration is unavailable) an average effective maturity of greater than or equal to 10 years.
- **Intermediate Funds** invest in securities with a duration of 3.5 to 6 years or (if duration is unavailable) an average effective maturity of 4 to 10 years.
- **Short Funds** invest in securities with a duration of 1 to 3.5 or (if duration is unavailable) an average effective maturity of 1 to 4 years.

Long-Term Bond Funds invest primarily in corporate and other investment-grade U.S. fixed-income issues with a duration greater than 6 years or (if duration is unavailable) an average effective maturity greater than 10 years.

Intermediate-Term Bond Funds invest primarily in corporate and other investment-grade U.S. fixed-income issues with a duration of 3.5 to 6 years or (if duration is unavailable) an average effective maturity of 4 to 10 years.

CATEGORIES

BOND FUNDS (cont.)

Short-Term Bond Funds invest primarily in corporate and other investment-grade U.S. fixed-income issues with a duration of 1 to 3.5 years or (if duration is unavailable) an average effective maturity of 1 to 4 years.

Ultrashort Bond Funds invest primarily in investment-grade U.S. fixed-income issues with a duration of less than 1 year or (if duration is unavailable) an average effective maturity of less than 1 year. This category includes corporate and government bond funds, but excludes international, convertible, multisector, and high yield bond funds.

Bank Loan Funds primarily invest in floating-rate bank loans instead of bonds. In exchange for their credit risk, these loans offer high interest payments that typically float above a common short-term benchmark such as the London interbank offered rate, or LIBOR.

High Yield Bond Funds concentrate on lower-quality bonds. These funds primarily invest in U.S. high-income fixed-income securities where at least 65% or more of bond assets are not rated or are rated by a major agency at the level of BB (considered speculative for taxable bonds) and below.

Multisector Bond Funds seek income by diversifying their assets among several fixed-income sectors, usually U.S. government obligations, U.S. corporate bonds, foreign bonds, and high-yield U.S. debt securities. These funds typically hold 35% to 65% of bond assets in securities that are not rated or are rated by a major agency at the level of BB (considered speculative for taxable bonds) and below.

Inflation-Protected Bond Funds primarily invest in debt securities that adjust their principal values in line with the rate of inflation. These bonds can be issued by any organization, but the U.S. Treasury is currently the largest issuer of these types of securities.

World Bond Funds invest 40% or more of their assets in foreign bonds. Some funds follow a conservative approach, favoring high-quality bonds from developed markets. Others are more adventurous and own some lower-quality bonds from developed or emerging markets. Some funds invest exclusively outside the U.S., while others regularly invest in both U.S. and non-U.S. bonds.

Emerging Markets Bond Funds invest more than 65% of assets in foreign bonds from developing countries. The largest portion of the emerging-markets bond market comes from Latin America, followed by Eastern Europe. Africa, the Middle East, and Asia make up the rest.

Nontraditional Bond Funds pursue strategies divergent in one or more ways from conventional practice in the broader bond-fund universe. Funds within this category often will use credit default swaps and other fixed income derivatives to a significant level within their portfolios.

CASH/STABLE VALUE FUNDS

Money Market Funds invest in short-term money market securities to provide a level of current income consistent with the preservation of capital.

Stable Value Funds typically invest in guaranteed investment contracts (GICs) and Synthetic GICs. Traditional GICs are contracts between insurance firms and a retirement plan guaranteeing investors a fixed rate of return. The more common synthetic GICs are high-quality, short- to intermediate-term bonds that are bound by insurance "wrappers." If a stable value portfolio falls below the rate of return set by the wrapper, the insurer pays the difference, keeping the fund stable.

The following statistics are not available for Money Market and Stable Value Funds: Alpha, Beta, R-squared, Treynor Ratio, Turnover Ratio, Morningstar Risk 3-Year and Morningstar Rating 3-Year.

In providing access to and/or preparing this report, Neither MasteryPOINT, Morningstar, nor Newkirk shall be deemed an agent, fiduciary or co-fiduciary to, of, or for any Plan. Although the information contained within this report has been obtained from sources believed to be reliable, MasteryPOINT does not guarantee the accuracy, adequacy, completeness or availability of any information. Information is subject to change without notice.

There are no warranties, conditions, guaranties or representations, whether expressed or implied, in law or in fact, oral or in writing. Without limiting the foregoing, MasteryPOINT, its affiliates and each information provider or other third-party supplier expressly disclaims any condition of quality and any implied warranty of title, non-infringement, merchantability or fitness for a particular purpose. Under no circumstances will MasteryPOINT, Inc., its affiliates, their employees, contractors, agents, or any information provider or other third-party supplier be liable for any indirect, incidental, special or consequential damages for any errors in the information contained in this report or for any actions taken in reliance thereon, including lost profits, regardless of whether such damages could have been foreseen or prevented.

Performance quoted represents past performance and cannot guarantee future results. Current performance may be lower or higher than the performance shown. Investment return and principal value will fluctuate. An investor's shares, when redeemed, may be worth more or less than their original purchase price. Performance includes the reinvestment of dividends and capital gains. Performance may be hypothetical performance from an older share class and restated by Morningstar to reflect any expense differences between the share classes.

Unless otherwise noted, data displayed are from Morningstar, Inc., or are based on Morningstar data. Historical data may be from S&P or be based on S&P data. All peer group ranks are calculated or assigned by Newkirk. Peer group ranks for performance, Standard Deviation, Beta, Alpha, R-Squared, Treynor, Sharpe, Sortino, and Expense Ratio are truncated to clarify when a standard has been met or surpassed. For example, funds with 24.1% and 24.9% peer group ranks for 1-Year Returns are listed as 24% to indicate that they would fail a 25% standard. Net Assets and Manager Tenure data also are truncated. For example, \$49.1 million and \$49.9 million for Net Assets are listed as \$49 million to indicate that they would fail a \$50-million standard.

The portfolio manager is the individual (or individuals) responsible for the overall fund strategy, as well as the buying and selling decisions of the securities in a fund's portfolio. If one manager is considered the lead manager for the fund, that individual's name, along with the individual's tenure, is listed. If more than one manager is designated as a lead manager, the lead manager with the longest tenure is listed. If no manager is identified as lead manager, the manager with the longest tenure is listed.

Total Assets displayed prior to 2/28/2009 reflect only the assets in the individual share class. Beginning with 2/28/2009 data, Total Assets displayed include the assets for all share classes of a fund. Total Assets are reported as of the end of the most recent month available to Morningstar.

The Morningstar Rating for funds, commonly called the Star Rating, is a measure of a fund's risk-adjusted return, relative to funds in its category. Funds are ranked from one to five stars. Funds are ranked within their categories and stars are assigned as follows: Top 10% – 5 Stars; Next 22.5% – 4 Stars; Middle 35% - 3 Stars; Next 22.5% - 2 Stars; Bottom 10% - 1 Star.

Alpha, Beta and R-squared statistics are calculated using the broad-based benchmark as determined by Morningstar. Morningstar does not provide Alpha, Beta and R-squared statistics using the broad-based benchmark for money market funds, and therefore these statistics do not appear for money market funds.

Morningstar groups funds in categories based on the fund's underlying portfolio holdings (portfolio statistics and compositions over the past three years). If a fund is new, Morningstar will estimate where the fund will fall until a more permanent category can be assigned. A fund's category may change based on current information.

An asterisk (*) next to a fund name indicates that the data for the fund has been provided by sources outside of Morningstar, Newkirk/MasteryPOINT and their content providers and is not warranted to be accurate, complete or timely. Please contact your specific plan representative for more information regarding this data.

As of 3/31/2013

Investment Objective (*)

The Fund's objective is the safety and preservation of principal and accumulated interest for participant-initiated transactions. The interest credited to balances in the Fund will reflect both current market conditions and performance of the underlying investments in the Fund.

Investment Strategy

The Fund invests entirely in the MetLife Group Annuity Contract 25157 which consists of separately managed investment portfolios directed by Reliance Trust Company.

About Metropolitan Life Insurance Company

For over 140 years, MetLife has been one of the most trusted financial institutions in the United States and is a leading global provider of insurance, employee benefits and other financial services.

Important Information

The Fund is a bank collective trust fund for which Reliance Trust Company serves as trustee and investment manager. The Fund is not FDIC-insured or registered with the Securities and Exchange Commission.

Investors should carefully consider the fund's investment objectives, risks, charges and expenses before investing. To obtain an offering circular containing this and other information, contact us at CITGroup@relico.com.

***Not FDIC Insured * May Lose Value
* No Bank Guarantee**

(*) Subject to terms and conditions set out in the Participation Agreement and Declaration of Trust.

		As a Percent	Per \$1,000 Invested	
<i>Reliance Trust Stable Value Fund – MetLife Series 25157 Class II</i>	Stable Value	0.98%	\$9.80	An administrative service fee of 0.35% from the 0.98% fund expense is intended to enable a Participating Trust to fund plan level fees and expenses paid to third parties for services, including, among others, participant recordkeeping, communication and education services and other administrative services provided to the Participating Trust or its accompanying Plan.

Consider these risks before investing:

The Fund is not intended as a complete investment program, and there can be no guarantee that it will achieve its goal. The Fund's return will fluctuate. The Fund is not insured or guaranteed by any government agency, by Reliance Trust Company, or by the Contract Issuer.

The Group Annuity Contract (GAC) purchased by the Fund permit the Fund to account for the fixed income securities held in the separate accounts at book value (principal plus interest accrued to date). Through the use of book value accounting, there is no immediate recognition of investment gains and losses on the Fund's underlying investment in securities of the separate accounts. Instead, gains and losses are recognized over time by periodically adjusting the interest rate credited to the Fund under the GAC. However, while the Fund seeks to preserve your principal investment, it is possible to lose money by investing in this Fund. The GAC provides for the payment of certain participant-benefit responsive withdrawals and exchanges at book value during the term of the GAC. In order to maintain the GAC issuers' promise to pay such withdrawals and exchanges at book value, the GAC subject the Fund and its participants to certain restrictions. For example, withdrawals prompted by certain events (e.g., layoffs, early retirement windows, spin-offs, sale of a division, facility closing, plan terminations, partial plan terminations, changes in laws or regulations) may be paid at the market value of the Fund's separate accounts, which may be less than your book value balance.

To request a copy of Fund's offering circular email CITGroup@relico.com. The offering circular includes investment objectives, risks, charges and expenses and other information that you should read and consider carefully before investing.

General

This Fund is a bank collective trust fund for which Reliance Trust Company (“RTC”) serves as trustee and investment manager. The Fund is not FDIC insured and is not guaranteed by Reliance Trust nor guaranteed by any governmental agency.

Participation in this Collective Trust Fund is limited to Eligible Trusts that are accepted by the Trustee as Participating Trusts. As more fully described in the Declaration of Trust, Eligible Trusts include (i) certain employee benefit trusts exempt from federal income taxation under Code Section 501(a); (ii) certain governmental plans or units described in Code Section 414(d), Code Section 457(b), and Code Section 818(a) (6); (iii) certain commingled trust funds exempt from federal income taxation under Code Section 501(a); and (iv) certain insurance company separate accounts as defined in Investment Company Act Section 2(a) (17). Units of beneficial interest in the Fund are not registered under the Securities Act in reliance on an exemption under that Act for interests in a collective trust fund maintained by a bank for certain types of employee benefit trusts.

Investors should carefully consider the fund’s investment objectives, risks, charges and expenses before investing. To obtain an offering circular containing this and other information, contact us at CITGroup@relico.com. Please carefully read the offering circular and recent financial statements for important information before investing.

Performance

The performance information provided is historical and past performance and is not a guarantee of future results. Current performance may be lower or higher than performance information shown.

RTC charges a total annualized fee for investment and administrative services equivalent to 0.98% of assets invested in the Fund. The fee will be calculated and accrued daily in the Fund’s net asset value and will be paid from the Fund’s assets monthly or quarterly as determined by RTC. From this fee, RTC will pay an administrative service fee of 0.35% intended to enable a Participating Trust to fund plan level fees and expenses paid to third parties for services, including, among others, participant recordkeeping, communication and education services and other administrative services provided to the Participating Trust or its accompanying Plan. These charges are reflected in the returns presented. Returns also include all income, realized and unrealized capital gains and losses, and all transactional and contract execution costs.

Definitions and Commonly Used Terms

Average Maturity. The dollar-weighted average length of time until bonds held by a portfolio reach maturity and are repaid. In general, the longer the average maturity, the more a portfolio’s share price will fluctuate in response to changes in market interest rates.

Average Credit Quality. The combined credit rating for all bonds held in a portfolio based on each bond’s credit rating, adjusted for its relative weighting in the portfolio.

Benefit Responsive Protection. The Fund receives protection of principal through benefit-responsive investment contracts. Under these contracts, participant-directed withdrawals for benefit payments, loans or exchanges to other non-competing investment-plan options are made at book value. Please consult the Fund’s offering circular for more information before investing.

Book Value. Typically defined as amortized cost (initial principal investment amount) adjusted for subsequent deposits and withdrawals including credited interest.

Competing Fund Rule. To address arbitrage risk, the Fund prohibits participant transfers to other investment plan options such as other stable value funds, money market funds and short-to-intermediate duration bond funds (typically with durations less than 3 ½ years). Please consult the Fund’s offering circular for more information before investing.

Crediting Rate. The rate of return received by participants invested in the Fund. The initial crediting rate is roughly equal to the security’s yield to maturity. The Fund’s crediting rate is reset on a periodic basis, usually quarterly using the expected yield of maturity of the underlying securities. Additional detailed information regarding the crediting rate formula and calculation are available from the trustee upon request.

Duration. A measure of a security’s price sensitivity to changes in interest rates. Securities with longer durations are more sensitive than securities of shorter duration.

Insurer Ratings. A current and independent opinion of the financial security characteristics of an insurance organization with respect to its ability to pay under its insurance policies and contracts in accordance with their terms. The explanation for ratings can be found at: www.ambest.com; www.fitchratings.com; www.moody.com; and standardandpoors.com.

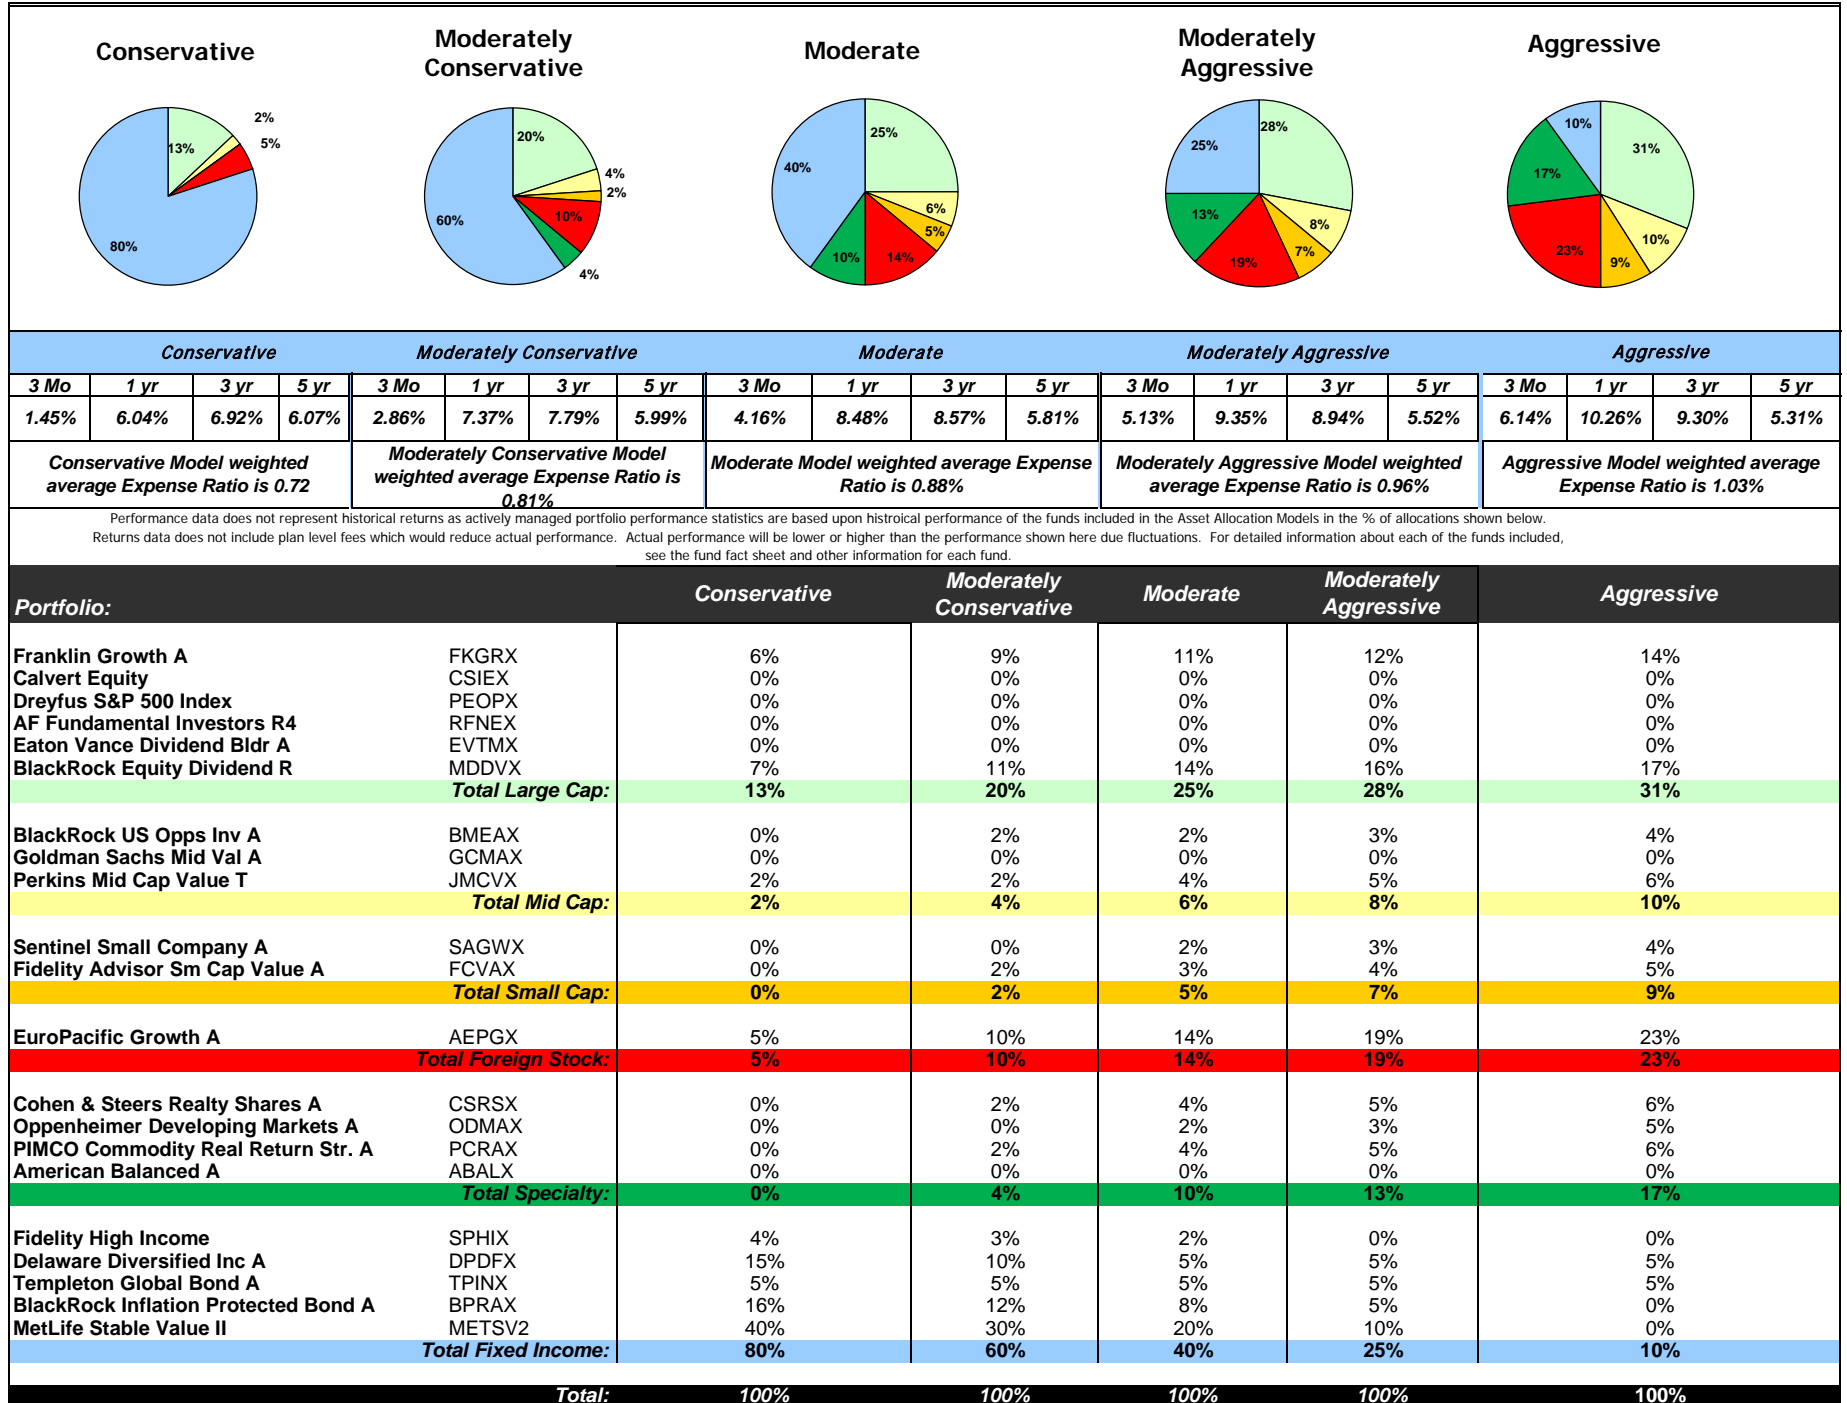

Market to Book Value. This ratio divides the market value of the underlying assets by their current book value and is a measure of the Fund’s credit exposure to the benefit-responsive group annuity contract.

Wrap contract issuer or wrapper. A financial institution (typically a bank or insurance company) that issues the benefit responsive investment contract. Wrap guarantees are subject to the financial strength and claims paying ability of the underlying financial institution underwriting the wrap contract.

Yield to Maturity. The rate of return anticipated on a bond if it is held until the maturity date. The calculation of YTM takes into account the current market price, par value, coupon interest rate and time to maturity.

City of Madison 457 Deferred Compensation Plan Performance as of March 31, 2013

Market Review - 1st Quarter 2013

With the fiscal cliff over, U.S. equity markets moved higher over the quarter. Not only did they advance at a fairly brisk pace, but they finished the quarter at all-time highs. The approaching debt ceiling and sequester, consisting of budget cuts to be implemented gradually across many government agencies, did little to slow the U.S. equity markets down. For the quarter, U.S. equity finished up 11.1 percent (Russell 3000 Index). International equity markets lagged their U.S. counterparts, returning 5.2 percent for the quarter (MSCI EAFE Index). Fixed income markets failed to achieve a positive return, as interest rates ticked higher. Most fixed income sectors, except for the most risky, were negative. For the quarter, the U.S. fixed income market posted a negative 0.1 percent return (Barclays U.S. Aggregate Index).

Reversing the trend in 2012, the first quarter of 2013 saw net new positive cash inflows into equity mutual funds. Clearly, investors were becoming more comfortable with equity markets, likely noticing the strong double digit returns posted by equity markets in 2012. With rising equity markets, interest rates also began to rise over the quarter. As measured by the 10-year Treasury bond yield, rates went from 1.76 percent at year end to 1.85 percent by quarter end. Over the quarter the 10-year Treasury bond hit a high of 2.09 percent, a level not seen in over a year. The rise in rates over the quarter was enough to hold fixed income performance back, but not cash flows into bond funds. Much like 2012, bond mutual funds continued to garner net new positive cash flows, outpacing their equity mutual fund counterparts.

Central banks around the world continue to supply global capital markets with liquidity through their easy monetary policies. The latest entrant to the party was Japan, who indicated they would pump approximately \$1.4 trillion into their economy in less than two years. This would effectively double Japan's monetary base to 270 trillion yen, or approximately \$2.9 trillion. This probably helped propel Japan's equity markets to double digit gains over the quarter. Recent issues surrounding Cyprus, a small eurozone country, suggest that the eurozone issues have not gone away. Prolonged easy monetary policy, however, is a risk in and of itself. Just a year ago the Fed weighed in on whether to apply further stimulus (eventually giving way to more in 2012). To this point, these policies have helped the capital markets, but at some point, the risks may begin to offset the rewards.

U.S. Equity

All U.S. equity styles posted strong gains over the quarter. The U.S. equity market posted a positive 11.1 percent return for the quarter (Russell 3000 Index). The best performing U.S. equity style was small growth, returning a positive 13.2 percent (Russell 2000 Growth). The worst performing U.S. equity style was large growth, returning a positive 9.5 percent (Russell 1000 Growth).

International Equity

Developed international equity underperformed U.S. equity for the quarter, returning a positive 5.2 percent (MSCI EAFE). International small cap stocks typically outperformed their large cap counterparts for the quarter. Japan was the best performing region, returning a positive 11.7 percent for the quarter (MSCI Europe ex UK). Emerging markets was the worst performing region, returning a negative 1.6 percent (MSCI United Kingdom).

Fixed Income

The broad U.S. fixed income market posted a small loss for the quarter, returning a negative 0.1 percent (Barclays Capital U.S. Aggregate). The strongest returns were found in the High Yield Corporate bond sector returning 2.9 percent for the quarter (BC High Yield Corporate). Global fixed income underperformed the broad U.S. fixed income market, returning a negative 1.98 percent (BofA ML Global Broad Market) for the quarter.

Market Review - 1st Quarter 2013

Domestic Equity Overview

U.S. Equity Index Performance

- All U.S. equity styles posted strong returns for the quarter

- Small growth was the best performing style:
 - Up 13.2% for the quarter

- Large growth was the worst performing style:
 - Up 9.5% for the quarter

- Best performing sectors for the quarter:
 - Health Care, up 15.8%
 - Consumer Staples, up 14.6%

- Worst performing sectors for the quarter:
 - Information Technology, up 4.6%
 - Materials, up 4.8%

U.S. Equity Sector Performance

Market Review - 1st Quarter 2013

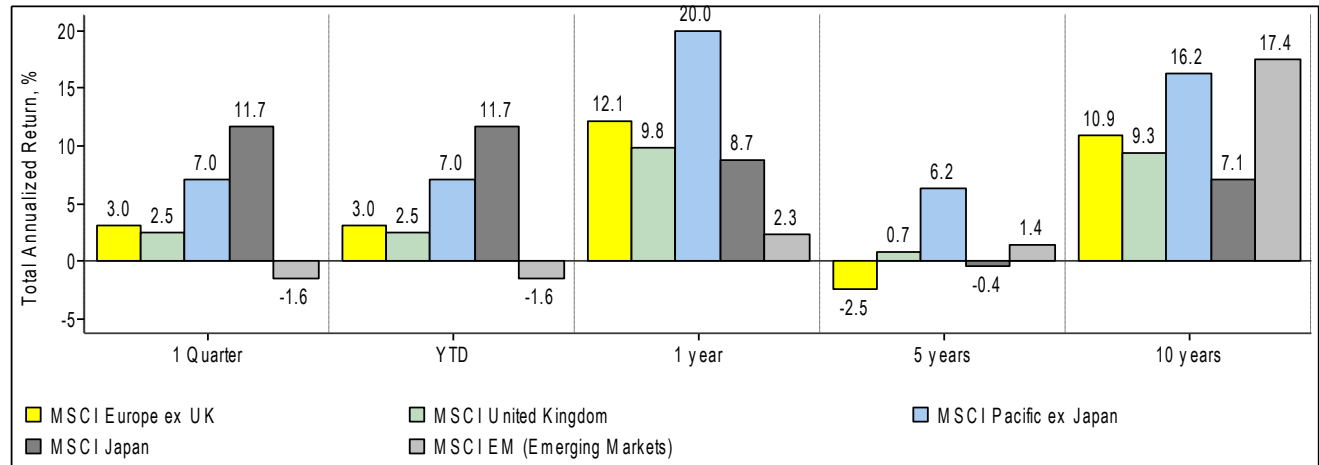

International Equity Overview

- Small cap equity was the best performing international style
- The best performing style for the quarter:
 - Small value, up 9.4%
- The worst performing style for the quarter:
 - Large value, up 3.3%
- Best performing region (Qtr)
 - Japan, up 11.7%
- Worst performing region(s) (Qtr)
 - Emerging markets, down 1.6%

International Index Performance by Style and Capitalization

International Index Performance by Region

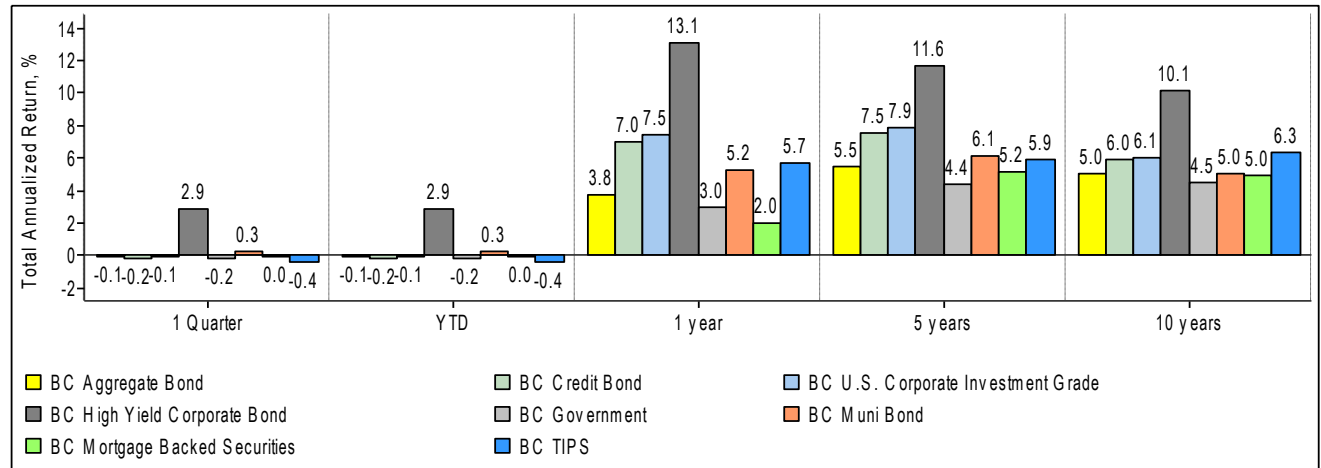

Market Review - 1st Quarter 2013

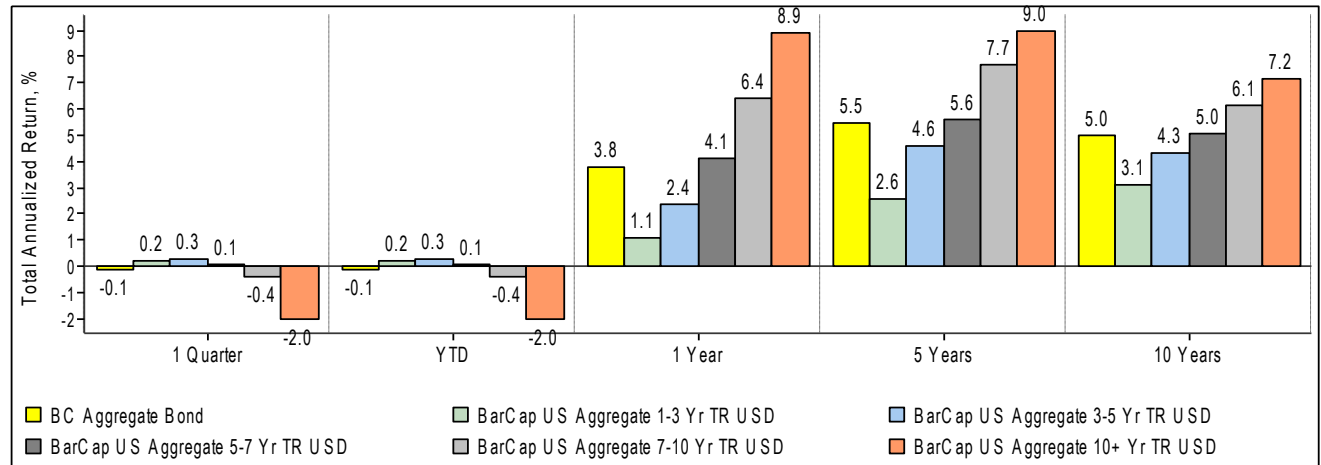

Fixed Income Overview

- Performance was essentially flat for all fixed income sectors except for High Yield
- The riskier fixed income sectors, again, were the best performing ones
- The best performing sector for the quarter:
 - High Yield, up 2.9%
- The worst performing sectors for the quarter:
 - TIPS, down 0.4%
 - Government, down 0.2%
- Longer-term bonds underperformed as yields rose

Market Review - 1st Quarter 2013

Kaleidoscope: Changing Leadership

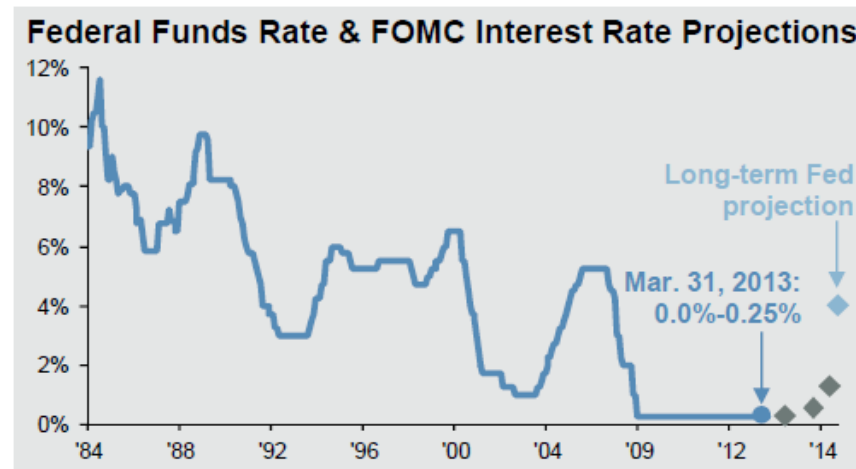

The following chart exhibits the volatility of asset class returns from year to year by ranking certain key indices in order of performance. Also included in the chart is a balanced index, which represents a mix of U.S. equity, international equity and fixed income indices. The chart graphically displays the volatility of asset class returns from year to year, highlighting the importance of diversification. Top-performing asset classes in a given year do not tend to repeat their stellar performance in subsequent years. Accordingly, the worst performing asset classes in a given year often tend to outperform in future years. Said differently, past performance is not a good indicator of future performance. Diversification, demonstrated by the balanced index, helps reduce return volatility and the uncertainty that accompanies trying to pick the best asset class (or avoid the worst) in any given year.

The Federal Funds Rate & Projections

The following chart reflects the historical federal funds rate which is set by the Federal Reserve when setting monetary policy. The chart also shows what some projections for the future federal funds rate may be. The projections below are based on the average expectations of the FOMC members. This chart shows that they expect monetary policy tightening in the near future. A low federal funds rate (easy monetary policy) encourages growth, but may also help cause inflation. While higher rates (tighter monetary policy) are more restrictive of growth, they also help prevent inflation, which can be harmful to the economy at high levels. These are some of the considerations that the FOMC must take into account when setting monetary policy (along with unemployment, not discussed here, which is another consideration).

Market Review - 1st Quarter 2013

Disclosures

Performance of indexes reflects the unmanaged result for the market segment the selected stocks represent. Indexes are unmanaged and not available for direct investment.

Citigroup Corporate Bond is an index which serves as a benchmark for corporate bond performance. You cannot invest directly in an index.

Citigroup Mortgage Master is an index which serves as a benchmark for U.S. mortgage-backed securities performance.

Citigroup WGBI Index is an index which serves as a benchmark for global bond performance, including 22 different government bond markets.

Credit Suisse High Yield Index is an unmanaged, trader priced index constructed to mirror the characteristics of the high yield bond market.

BC (Barclays Capital) U.S. Aggregate Bond Index represents securities that are U. S., domestic, taxable, and dollar denominated. The index covers the U. S. investment grade fixed rate bond market, with index components for government and corporate securities, mortgage pass-through securities, and asset-backed securities. These major sectors are subdivided into more specific indices that are calculated and reported on a regular basis.

BC Credit Bond Index includes publicly issued U.S. corporate and specified foreign debentures and secured notes that meet the specified maturity, liquidity, and quality requirements. To qualify, bonds must be SEC-registered.

BC U.S. Corporate Investment Grade represents investment grade corporate securities that are U. S., domestic, taxable, and dollar denominated.

BC High Yield Corporate Bond represents below investment grade corporate securities that are U. S., domestic, taxable, and dollar denominated.

BC TIPS Index includes publicly issued U.S. government treasury inflation protected securities that meet the specified maturity, liquidity and other requirements.

BC Mortgage Backed Securities covers agency mortgage-backed pass-through securities (both fixed-rate and hybrid ARMs) issued by Ginnie Mae (GNMA), Fannie Mae (FNMA), and Freddie Mac (FHLMC).

BC Muni Bond covers the USD-denominated long term tax exempt bond market with four main sectors: state and local general obligation bonds, revenue bonds, insured bonds, and pre-refunded bonds.

BC Government Index includes publicly issued U.S. government securities that meet the specified maturity, liquidity and other requirements.

BarCap U.S. Aggregate 1-3 Yr. TR USD Index represents securities in the BC U.S. Aggregate Index that have maturity dates over the next 1 to 3 years.
