Subject: Phase 1 Environmental Site Assessment Report
Voit Farm Property, 3420-3510 Milwaukee Street, Madison, WI 53704

Dear Ms. Hayes:

SCS Engineers (SCS) completed a Phase 1 Environmental Site Assessment (ESA) for the Voit Farms Subject Property located at 3420-3510 Milwaukee Street in Madison, Wisconsin. The Phase 1 ESA Report is attached.

This assessment identified recognized environmental conditions (RECs) associated with the historical use of the Subject Property as outlined in **Section 10** of the report.

SCS appreciates the opportunity to perform this environmental assessment. Please call Betty at 608-212-6664 with any questions regarding the Phase 1 ESA Report.

Sincerely,

Jackie Rennebohm

EXECUTIVE SUMMARY

SCS Engineers (SCS) performed a Phase 1 Environmental Site Assessment (ESA) consistent with the Environmental Protection Agency (EPA) Standards and Practices for All Appropriate Inquiries (AAI) as set forth in 40 CFR, Part 312 and the ASTM International (ASTM) Standard E1527-21 on five parcels of land owned by Voit Land LLC, E C Voit & Sons, and Voit Land LLC c/o Thomas J Voit, located at 3420-3510 Milwaukee Street, Madison, Wisconsin, hereafter referred to as the Subject Property.

The purpose of this Phase 1 ESA is to identify, to the extent practicable, recognized environmental conditions (RECs) in connection with the Subject Property. In order to accomplish this, an historical review, and an inspection of the Subject Property were performed.

The Subject Property has a total area of approximately 65 acres and consists of the following:

Address	Description	Size	Property ID#
3420 Milwaukee St.	Vacant triangular lot	0.44 acres	0710-051-1017-8
3450 Milwaukee St.	Concrete ready mix plant, surface mine & pond, agricultural land, farmstead out-buildings & foundations	56.3 acres	0710-051-8251-0
No Address	Backfilled pond area	8.0 acres	0710-042-8860-7
3490 Milwaukee St.	Residence (former Voit farmhouse)	0.43 acres	0710-051-9860-6
3510 Milwaukee St.	Residence	0.5 acres	0710-051-9810-6

The Subject Property was part of a larger property that has been owned, managed, and occupied by the Voit family for approximately 150 years and originally operated as a family-owned, primarily dairy, farm. The farmstead is located at 3490 Milwaukee Street. The agricultural fields adjoining the farmstead are currently leased for row crops. The original farmhouse was demolished in the 1940s and a replacement farmhouse was built closer to Milwaukee Street. A residential home was built at 3510 Milwaukee in about 1955 and is currently occupied. The farmhouse is vacant.

The Voit family built a ready mix facility at the southwest corner of the Subject Property in 1948. The ready mix facility operated through 2020. The ready mix facility structures, including the office, maintenance building, and materials tower remain. Portions of the former ready mix facility area are currently leased to landscaping and snow removal companies, and used by the companies for storage and operations.

The northern half of the Subject Property was surface mined for sand and gravel starting in the 1930s. Surface mining ended approximately 50 years ago but dredging of sand and gravel on the northern half of the Subject Property continued into the early 1990s. Mining and dredging operations created two ponds, and a central mine area south of the ponds. The eastern pond was filled from approximately 2006 to 2010, and the central mine area was filled from approximately 2010 to 2015, reportedly with material from City of Madison road construction projects. Overfilling in the eastern pond area created a mound that is approximately 20 feet higher than the adjacent wetlands. Filling in the central mine area has brought that area up to a few feet higher than the adjacent agricultural fields. Contamination has been documented in some of the non-native fill soils and materials used for backfill. Soil mounds and debris are present on other areas of the Subject Property including the low areas near Starkweather Creek.

The backfilled former mining areas, the existing pond area, the wetlands, and areas adjacent Starkweather Creek are currently unused for any purpose.

This assessment has revealed no evidence of RECs in connection with the Subject Property except for the following:

1. **The presence of non-native fill soil and other fill materials on the Subject Property.** Fill soils from undocumented sources are present over much the northern portion of the Subject Property and possibly containing cinders, slag, metal, other debris, and contaminants.

2. **The presence of non-native fill soils and other fill material with elevated concentrations polycyclic aromatic hydrocarbons (PAHs) and Resource and Conservation Recovery Act (RCRA) metals in soil and groundwater on the Subject Property.** SCS completed a Phase II investigation in the northern part of the Subject Property in 2018. Soil and groundwater samples were analyzed of PAHs, metals, and volatile organic compounds (VOCs). The investigation found non-native fill soils with cinders, slag, metal debris, and other debris on the Subject Property, and elevated concentrations of PAHs and metals in excess of Wisconsin Department of Natural Resources (WDNR) standards within the non-native fill soils.

3. **The detection of contaminants in groundwater near and upgradient from the Subject Property.** Arsenic, nickel, and tetrachloroethylene (PCE) were detected above their respective Wisconsin Administrative Code NR 140 standards in groundwater samples collected in 2017 and 2018 from monitoring wells on the adjoining property owned by the City of Madison. The monitoring wells were installed around the 8-acre Subject Property parcel, within approximately 100 feet of the Subject Property and are upgradient of the Subject Property based on groundwater elevations. The contaminated groundwater on the City-owned property to the east may have, or might migrate to the Subject Property. Vapors associated with the PCE-contaminated groundwater are also a potential concern.

Continued Viability of Environmental Site Assessment:

Consistent with ASTM Standard E1527-2021 section 4.6, this *environmental site assessment* is presumed to be viable when it is conducted within 180 days prior to the date of acquisition of the *Subject Property or* the date of the intended transaction.

Following are the dates on which the components of this environmental site assessment were conducted:

	Dates Conducted
Interviews with owners, operators, and occupants	2/10/2022
Searches for recorded environmental cleanup liens (a User responsibility)	2/21/2022
Reviews of federal, tribal, state, and local government records	1/25 -2/14/2022
Visual inspections of the Subject Property and of adjoining properties	2/10 & 21/2022
Declaration by the environmental professional responsible for the assessment	2/25/2022

1.0 INTRODUCTION

The purpose of the ASTM's Phase I *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process,* is to define good commercial and customary practice for conducting environmental site assessments of commercial real estate. The standard has been used to conduct "all appropriate inquiries" to provide defense to federal Superfund liability under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). The current standard, ASTM E1527-21, *was published on* November 15, 2021. The previous (2013) version of ASTM's Phase I Standard was incorporated by reference into the EPA's AAI Rule, 40 C.F.R. §312.11.

The AAI Rule has not yet been updated to cite the new ASTM standard. EPA review of ASTM E1527-21 and the proposed and final rulemaking process may take several months to complete. In the interim, SCS has conducted this Phase 1 ESA incorporating the revisions in ASTM E1527-21, while conforming to the previous version of the standard referenced in the federal regulations. The 2021 version of the standard will likely be required to satisfy the EPA's AAI requirements and qualify for the applicable CERCLA defenses within the next several months.

1.1 PURPOSE

The purpose of this Phase 1 ESA is to identify, to the extent practicable, *recognized environmental conditions (RECs) in connection with the Subject Property in accordance with ASTM* E 1527-21. As stated in ASTM E 1527-21, section 1.1.1,

> "The term *recognized environmental condition* means *(1)* the presence of *hazardous sub- stances* or *petroleum products* in, on, or at the *subject property* due to a *release* to the *environment*; *(2)* the likely presence of *hazardous substances* or *petroleum products* in, on, or at the *subject property* due to a *release* or likely *release* to the *environment*; or *(3)* the presence of *hazardous substances* or *petroleum products* in, on, or at the *subject property* under conditions that pose a *material threat* of a future *release* to the *environment*. A *de minimis condition* is not a *recognized environmental condition*."

A de minimis condition is defined in ASTM E 1527-21, section 3.2.20 as follows:

> *"de minimis condition, n—a condition related to a release that generally does not present a threat to human health* or the *environment* and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. A condition determined to be a *de minimis condition* is not a *recognized environmental condition* nor a *controlled recognized environmental condition*."

In addition, this investigation may identify historical RECs (HRECs) and controlled RECs (CRECs) at the Subject Property.

An HREC is defined in ASTM E 1527-21, section 3.2.39 as follows:

> *"historical recognized environmental condition, n—a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or*

authorities without subjecting the subject property to any controls (for example, activity and use limitations or other property use limitations). A historical recognized environmental condition is not a recognized environmental condition."

A CREC is defined in ASTM E 1527-21, section 3.2.18 as follows:

"controlled recognized environmental condition, n—recognized environmental condition affecting the *subject property* that has been addressed to the satisfaction of the applicable regulatory authority or authorities with *hazardous substances* or *petroleum products* allowed to remain in place subject to implementation of required controls (for example, *activity and use limitations* or *other property use limitations*)."

The term "release" has the same meaning as the definition of a "release" under the CERCLA and is defined in section 3.2.75 of the ASTM E1527-21 standard as follows:

*"release, n/v—*a *release* of any *hazardous substance* or *petroleum product* shall have the same meaning as the definition of "*release*" in CERCLA 42 U.S.C. § 9601(22)."

Additionally, the terms "migrate" and "migration" refer to the movement of hazardous substances or petroleum products in any form, including, for example, solid and liquid at the surface or subsurface, and vapor in the subsurface, and are defined in section 3.2.53 of the ASTM E1527-21 standard as follows:

*"migrate/migration, n/v—*for the purposes of this practice, "*migrate*" and "*migration*" refers to the movement of *hazardous substances* or *petroleum products* in any form, including, for example, solid and liquid at the surface or subsurface, and vapor in the subsurface."

1.2 REASONS FOR PERFORMING PHASE 1

This ASTM E 1527-21 Phase 1 ESA is being performed to satisfy due diligence requirements and to meet the AAI provisions necessary to qualify for certain landowner liability protections under the CERCLA.

1.3 SCOPE OF SERVICES

Consistent with the ASTM E 1527-21 Standard, SCS:

- Reviewed the following sources in association with the Subject Property and adjoining properties. (Note: adjoining properties include not only those properties with abutting property boundaries, but also properties that are across a street or alley from the Subject Property.)
  - Historical Aerial Photographs
  - Historical City Directories
  - Historical Topographic Maps
  - Historical Fire Insurance [Sanborn] Maps

- Reviewed reasonably ascertainable environmental and historical records, based on their availability and our professional discretion. Records may include the following:

  – Standard federal, tribal, and state inventories of contaminated sites within minimum search distances from the Subject Property;
  – Physical setting sources including current U.S. Geological Survey (USGS) or other topographic maps and Soil Conservation Survey soils maps;
  – Standard sources of historical information, property tax files, assessor's office files, building department records, zoning/land use records, and other sources (newspapers, internet sites, local libraries, interviews, etc.).

- Conducted a site visit inspecting the land and structures located on the Subject Property, and observing the adjoining properties to the extent that they can be seen from the Subject Property or public property. Current and past uses of the Subject Property and surrounding area were considered, and the primary features of the Subject Property noted. Observations focused on evidence of spills, leaks, chemical storage, stressed vegetation, and other indications that hazardous substances or petroleum products may have been released.

- Interviewed individuals likely to have information regarding the potential for contamination at the Subject Property. Individuals interviewed may include local government officials, past or current owners, operators or occupants, and the key site manager.

- Reviewed information and documents provided by the User related to the Subject Property.

- Reviewed the responses to the User Questionnaire provided by SCS. Section 3.2.94 of ASTM E1527-2021 defines user as follows:

  "*user, n*— the party seeking to use Practice E1527 to complete an *environmental site assessment* of the *subject property*."

- Reviewed regulatory files associated with the listing of the Subject Property, or adjoining properties, on any of the standard environmental record sources indicating contamination. The purpose of the regulatory file review is to obtain sufficient information to determine if a REC exists on the Subject Property in connection with the listing. A full regulatory file review was not performed.

- At the request of the User, we have incorporated into our report information regarding wetlands and environmental corridors from reports prepared by others.

1.4 SIGNIFICANT ASSUMPTIONS

SCS assumes that information collected during the Phase 1 ESA is accurate and correct unless it is obviously inaccurate or if information exists to the contrary.

1.5 LIMITATIONS AND EXCEPTIONS

Conclusions in this report represent our professional judgment and are limited to those site conditions and potential impacts from neighboring properties that could be discovered under the

scope of services authorized by the proposal. The conclusions presented were based on an inspection of the property, interviews, and a review of relevant records.

The conclusions and interpretations of this report do not collectively define all the risks associated with purchase or other use of the Subject Property. Should you, our client, or other interested parties, wish to further reduce the risks associated with undiscovered or unquantified environmental impacts, you may want to consider having additional assessment activities performed such as collecting and analyzing soil, groundwater, or other appropriate samples for compounds of relevant and particular concern, or complete other investigation activities as appropriate.

The assessment was prepared in accordance with the generally accepted industry standards at the time the work was performed. No other warranty is expressed or implied.

1.6 USER RELIANCE

This report is presented for use by our client, Stone House Development, Inc. (User). The report is not to be used by or relied upon by others who have not entered into a contract with SCS for these services.

1.7 SPECIAL TERMS AND CONDITIONS

No part of this document may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopy, recording, or any information storage and retrieval system, without written permission from SCS.

2.0 SUBJECT PROPERTY DESCRIPTION

The Subject Property was part of a larger property originally operated as a family-owned, primarily dairy farm. The farmhouse is located at 3490 Milwaukee Street. The agricultural fields adjoining the farmhouse and farm outbuildings are leased for row crops.

The northern and central parts of the Subject Property have historically been used for sand and gravel mining, though the mine areas have primarily been filled with the exception of a pond that is connected by a manmade canal to Starkweather Creek. Starkweather Creek runs along, and forms the western property boundary. Wetlands and an environmental corridor in the northern half of the Subject Property are discussed in Section 2.3. There are remnants of a former rail spur that extended onto the Subject Property across a concrete bridge over Starkweather Creek near the northern end of the Subject Property.

The concrete ready mix facility at the southwest corner of the Subject Property is not in operation. The ready mix facility operated through 2020. The ready mix facility structures, including the office, maintenance building, and materials tower, are currently present. Portions of the former ready mix facility area are currently leased to landscaping and snow removal companies and used by the companies for storage and operations.

Overfilling in the eastern pond area created a mound that is approximately 20 feet higher than the adjacent wetlands. Filling in the central mine area has brought that area up to a few feet higher than the adjacent agricultural fields. A topographic map of the Subject Property with a 2-foot contour interval is provided in Appendix A.

There are a total of eight buildings on the Subject Property. The buildings include the following:

1. Residence at 3510 Milwaukee Street
2. Residence at 3490 Milwaukee Street (farmhouse)
3. Two-car garage at the farmhouse
4. Concrete milk house at the farmhouse
5. Barn at the farmhouse
6. Ready mix plant
7. Ready mix plant office and maintenance shed (including a mechanical scale)
8. Pole barn north of ready mix plant office

Notable features on the Subject Property are shown in **Figures 2a** and **2b**. Natural features and topography are shown on **Figure 2c**.

2.1 SUBJECT PROPERTY OWNER, MANAGER, AND OCCUPANT

The Subject Property consists of five parcels totaling approximately 65 acres as follows:

Address	Description	Size	Property ID#
3420 Milwaukee St.	Vacant triangular lot	0.44 acres	0710-051-1017-8
3450 Milwaukee St.	Concrete ready mix plant, surface mine & pond, agricultural land, farmstead out-buildings & foundations	56.3 acres	0710-051-8251-0
No Address	Backfilled pond area	8.0 acres	0710-042-8860-7
3490 Milwaukee St.	Residence (former Voit farmhouse)	0.43 acres	0710-051-9860-6
3510 Milwaukee St.	Residence	0.5 acres	0710-051-9810-6

The Subject Property is owned by Voit Land LLC, E C Voit & Sons, and Voit Land LLC c/o Thomas J Voit (the Voit family). The Voit family historically used the part of the Subject Property for mining sand and gravel. A member of the Voit Family occupies the residence at 3510 Milwaukee Street. The farmhouse and outbuildings at 3490 Milwaukee Street are unoccupied. The Voit family leases a portion of the 3450 Milwaukee Street Subject Property parcel (vicinity of former ready mix plant) to JR Landscaping, and barters with Mike Sloban for storage of snowplowing equipment east of the office.

2.2 SUBJECT PROPERTY LOCATION

The Subject Property is located in a mixed-use (residential and commercial) area on the east side of the City of Madison, Wisconsin (**Figure 1**). Four of the parcels comprising the Subject Property are in the Town of Blooming Grove. The Subject Property is surrounded by the City of Madison and will be attached to the City of Madison by 2027. The small parcel in the southwest corner of the Subject Property at 3420 Milwaukee Street is located within the City of Madison. The Subject Property is located in Sections 4 and 5, Township 7 North, Range 10 East, in Dane County, Madison, Wisconsin.

2.3 SUBJECT PROPERTY LEGAL DESCRIPTION AND FEATURES

Tax parcel and select property records are included in **Appendix A**. A tax parcel map is included as **Figure 3**. Tax parcel details are as follows:

Address	Parcel ID, Owner, and Features	Acres
3450 Milwaukee Street	008/0710-051-8251-0, Voit Land LLC	56.3
	Notes and Features: - Contains sensitive environmental features (floodplains, or wetlands), and Dane County regulations may apply. - Parcel included in drainage district. - Concrete ready mix plant, surface mine & pond, agricultural land, farmstead out-buildings & foundations. - Vacant land was mined for sand and gravel. Some areas including the central mining area were filled with imported fill. - Existing pond was created by mining/dredging sand and gravel. - Starkweather Creek borders the western and northern property lines. - A railroad corridor parallels the northwestern property line, with a former spur entering the Subject Property.	
Unaddressed	008/0710-042-8680-7, E C Voit & Sons	8.0
	Notes and Features: - Contains sensitive environmental features (floodplains, or wetlands), and Dane County regulations may apply. - Vacant land that was mined for sand and gravel. - The pond created by mining/dredging sand and gravel was overfilled with imported fill creating a mound rising above the adjacent wetlands.	
3490 Milwaukee Street	008/0710-051-9810-6, Voit Land LLC	0.5
	Notes and Features: - Parcel included in drainage district. - Two-story residence (former Voit farmhouse) with a basement, unattached two car garage, stormwater cistern, sandpoint well, City sewer, currently no electricity, natural gas furnace.	
3510 Milwaukee Street	008/0710-051-9860-6, Voit Land LLC	0.43
	Notes and Features: - Parcel included in drainage district. - One-story residence with garage.	
3420 Milwaukee Street	251/0710-051-1017-8, Voit Land LLC c/o Thomas J Voit	0.0
	Notes and Features: - Vacant triangular lot along Starkweather Creek, historically used in ready mix concrete operations.	

The tax parcel records for the 3450 Milwaukee St. and the unaddressed parcel note that some portion of the parcel either contains or is in close proximity to sensitive environmental features (i.e.

shorelands, floodplains, or wetlands), that Dane County regulations may apply, and to contact the Dane County Zoning Division at (608) 266-4266 for additional permitting information.

In October 2017, raSmith conducted a Wetland Delineation of the northern half of the 56.3-acre and 8-acre parcels of the Subject Property. raSmith delineated five wetlands, shown on **Figure 4**. The five wetland areas are described as follows:

- Starkweather Creek floodplain wet meadow (Wetland 2, approximately 6,297.4 ft^2).
- Starkweather Creek slough floodplain wet meadows (Wetland 1, approximately 6,264.3 ft^2, and Wetland 3, approximately 22,949.8 ft^2).
- Excavated wet meadow pothole and connected ditch (Wetland 4, approximately 23,103.7 ft^2).
- Excavated sedge meadow pothole and connected drainage swale (Wetland 5, approximately 1,422.8 ft^2).

During the Wetland Delineation, raSmith also identified four waterways/waterbodies: Starkweather Creek, a slough of Starkweather Creek, and excavated mine pond, and a channel connecting the mine pond to Starkweather Creek. A copy of raSmith's Wetland Delineation Report is included in **Appendix A**.

In 2017 Vierbicher performed a Preliminary Site Investigation for the Milwaukee Street Development. Vierbicher's findings are summarized in their report, which is included in **Appendix A**. The preliminary site investigation noted the following:

- The northern 2/3 of the property is within an Environmental Corridor mapped by the Capital Area Regional Planning Commission (CARPC). Development of the property must follow guidelines specified by the CARPC and the WDNR.
- The Environmental Corridor includes the 75-foot wide buffer zone along Starkweather Creek, the 75-foot wide buffer zone along the wetlands, and the 100-year flood plain for Starkweather Creek.
- A major or minor amendment is required to transfer a portion or all of the land reclamation area out of the Environmental Corridor. An amendment would require a Federal Emergency Management Agency (FEMA) and WDNR approval of the change in the floodplain delineation.

The environmental corridor is shown on **Figure 5**.

2.4 PREVIOUS ENVIRONMENTAL REPORTS

SCS completed a Phase I ESA on the northern half of the Subject Property, parcels 008/0710-042-8680-7 and 008/0710-051-8251-0, in June 2018, and performed a Phase II ESA as a result of the Phase I findings in September 2018. Copies of the 2018 Phase I and Phase II ESA's are included in **Appendix B**.

2018 Phase I

SCS identified the following RECs in connection with the northern half of the Subject Property.

"The detection of contaminants in the groundwater near the Property, historical unimproved roads and unidentified objects on the adjoining property, the presence of old soil mounds on the 8-acre

parcel, and the lack of documentation for fill material on the 8-acre Property parcel are identified as a REC for the Property."

The 2018 Phase 1 include the following discussion:

1. *Surface mining for sand and gravel began on Property by the 1930s, and the last of the sand and gravel was dredged from the ponds in the mid-1980s to early 1990s. Regulations for the disposal of hazardous waste and procedures for enforcing the regulations were enacted during the 1970s and 1980s. Prior to that time, it was common practice for waste materials to be disposed on low-lying land, such as wetlands, quarries and gravel pits. Historical disposal of potentially contaminated material on the Property was not reported by Mr. Voit and documentation was not encountered during the assessment. If potentially contaminated material had been historically disposed, it appears it was not done with WDNR oversight and it would have likely been put out of the way of current and future surface mining activity. Based on the topography and the aerial photographs, one area of historical disposal may have been the low-lying land near Starkweather Creek. Another area may have been the south and southeast sides of the filled pond. Mounds of soil containing some rock were observed on the Property during the site visit. The soil mounds had trees growing through them of a size indicating the mounds have been there for many years. The largest mounds were on the south and southeast slopes between the filled area on the 8-acre Property parcel and the adjoining City of Madison property. Other soil mounds were observed on the low-lying land on the northwest part of the Property near Starkweather Creek. The ground surface on the low-lying land was very uneven with significant undulations covered with tall vegetation. The presence of the old soil mounds from an unknown source in a historically surface-mined area is identified as a REC for the Property.*

2. *A pond on the 8-acre Property parcel was filled with WDNR permission starting in 2006. The fill material was from road construction projects. The area is now the highest land on the Property. Documentation for the fill material was not obtained.*

   The Voit family sold the adjoining property to the east to Mautz Paint in the 1950s. Aerial photographs from the 1960s and 1970s show unimproved roads extending from the Property's gravel pits onto the Mautz Paint property. Small unidentified circular objects are visible near an intermittent stream/drainage ditch to the east. Unimproved roads into a remote undeveloped area can be the result of numerous activities including recreation, in this case building site considerations, and disposal. The City of Madison subsequently purchased the adjoining land.

   In 2017, the City of Madison installed four groundwater monitoring wells on their adjoining land around the 8-acre Property parcel. The shallow water table wells were sampled four times between October 2017 and January 2018. The groundwater flows generally from the northeast toward the southwest, toward Starkweather Creek. Arsenic was detected in MW1 at a concentration greater than the NR 140 enforcement standard (ES). Nickel was detected in MW1 and MW2 at concentrations greater than the NR 140 preventive action limit (PAL) and less than the ES. Tetrachloroethene was detected in one well, MW4, at concentrations greater than the PAL and less than the ES. The results were reported to the WDNR. The WDNR response was that no further action is required at that time.

2018 Phase II

SCS completed a Phase II investigation of the northern half of the Subject Property for this Phase 1. Geoprobe® (geoprobe) borings and test pits were installed to evaluate disposal of potentially contaminated fill material and impacted groundwater. The sample locations are plotted on **Figures 6** through **8** to show the locations relative to historical site features.

SCS oversaw the installation of 12 geoprobe borings in September 2018. Fill material was encountered at most of the boring locations extending from the ground surface to depths of at least 15 feet and in some cases more than 29 feet in the former pond area, and depths of 3 to 8 feet west of the existing pond. Some fill layers were observed to contain black sand and trace angular gravel (potential cinders). Samples were tested for RCRA metals, PAHs, and VOCs.

SCS collected groundwater samples from temporary boreholes GP2 and GP9 based on their location in the former pond area and near the northeast corner of the Subject Property where the chlorinated compounds were previously identified on the adjoining property.

In October 2018, SCS oversaw a test pit investigation (**Figure 6**). Test pits were focused on three areas of filled soil: the eastern edge of the filled pond, the soil piles along the western property boundary, and soil piles southwest of the existing pond. SCS observed similar subsurface conditions as the geoprobe borings but also observed plastic bags, cinders and slag, metal debris, polyvinyl chloride (PVC) tubing, organic fibers, landscape fabric, concrete slabs, and large boulders. Geoprobe and test pit logs are included in the Phase II report in **Appendix B**.

Laboratory analytical results identified the presence of metals, PAHs, and VOCs in soil and groundwater. Metals and PAHs were detected in soil at concentrations greater than their respective NR 720 residual contaminant levels (RCLs) and PAHs were detected above NR 140 ESs. Metals and VOCs were detected in groundwater above NR 140 standards, but at estimated concentrations. Analytical results are summarized in the Phase II report in **Appendix B.**

The elevated concentrations of metals and PAHs in excess of NR 720 RCLs and presence of non-native fill material containing cinders, slag, metal debris, and other debris on the Subject Property is an ongoing concern, and are considered RECs.

2.5 SUBJECT PROPERTY CURRENT AND HISTORICAL USE

The Subject Property was part of a larger property that has been owned, managed, and occupied by the Voit family for approximately 150 years, and originally operated as a family-owned, primarily dairy farm. The farmstead is located at 3490 Milwaukee Street. The agricultural fields adjoining the farmstead are currently leased for row crops. The original farmhouse was demolished in the 1940s and a replacement farmhouse was built closer to Milwaukee Street. A residential home was built at 3510 Milwaukee in about 1955 and is currently occupied. The farmhouse is vacant.

The Voit family built a ready mix facility at the southwest corner of the Subject Property in 1948. The ready mix facility operated through 2020. The ready mix facility structures, including the office, maintenance building, and materials tower, are currently present. Portions of the former ready mix facility area are currently leased to landscaping and snow removal companies and used by the companies for storage and operations.

The northern half of the Subject Property was surface mined sand and gravel starting in the 1930s. Surface mining ended approximately 50 years ago but dredging of sand and gravel on the northern

half of the Subject Property continued into the early 1990s. Mining and dredging operations created two ponds, and a central mine area south of the ponds. The eastern pond was filled from approximately 2006 to 2010, and the central mine area was filled from approximately 2010 to 2015, reportedly with material from City of Madison road construction projects.

Overfilling in the eastern pond area created a mound that is approximately 20 feet higher than the adjacent wetlands. Filling in the central mine area has brought that area up to a few feet higher than the adjacent agricultural fields. Soil mounds and debris are present on other areas of the Subject Property including the low areas near Starkweather Creek.

The backfilled former mining areas, the existing pond area, the wetlands, and areas adjacent Starkweather Creek are currently unused for any purpose.

Additional details on the history of the Subject Property are provided in Sections 5.0 through 5.3.

2.6 ADJOINING PROPERTIES

The following table summarizes observations of the adjoining properties that were made during the Subject Property inspection. An adjoining property is defined in ASTM E 1527-21, section 3.2.4, as follows:

> *"adjoining properties, n*—any real *property* or *properties* the border of which is contiguous or partially contiguous with that of the *subject property*, or that would be contiguous or partially contiguous with that of the *subject property* but for a street, road, or other public thoroughfare separating them."

Summary of Observations on Adjoining Properties		
Direction	**Land Use**	**Comments**
North 513 Jacobson Ave	City of Madison owned undeveloped land	No obvious indications of the use, storage, or generation of hazardous materials/wastes or petroleum products were observed.
East Multiple Addresses	City of Madison Starkweather Park	No obvious indications of the use, storage, or generation of hazardous materials/wastes or petroleum products were observed.
South 3449-3511 Milwaukee St	Residential Homes (3449-3509 Milwaukee Street) SS Morris Community AME Church (3511 Milwaukee Street)	No obvious indications of the use, storage, or generation of hazardous materials/wastes or petroleum products were observed.
Southwest 3412 and 3425 Milwaukee St	City of Madison owned undeveloped land	No obvious indications of the use, storage, or generation of hazardous materials/wastes or petroleum products were observed.

Summary of Observations on Adjoining Properties		
Direction	**Land Use**	**Comments**
West 9-33, 219, and 251 N Fair Oaks Ave	Residential Homes (9-33 N Fair Oaks Ave) Marine Tops Unlimited (219 N Fair Oaks Ave) Stock-N-Lock (251 N Fair Oaks Ave)	No obvious indications of the use, storage, or generation of hazardous materials/wastes or petroleum products were observed.
Northwest 3509 Webb Ave and 502 Jacobson Ave	Residential Homes	No obvious indications of the use, storage, or generation of hazardous materials/wastes or petroleum products were observed.

2.7 UNITED STATES GEOLOGIC SURVEY TOPOGRAPHIC MAP

A review of the 2018 USGS 12442041 Madison East, Wisconsin quadrangle map, reveals the Subject Property is located approximately 850 to 870 feet above mean sea level. The most recent topographic maps included in the Environmental Data Resources, Inc. (EDR) database report show the former eastern mine pond, which has been filled for nearly a decade. A more accurate representation of the current topography on the Subject Property is shown in the Dane County GIS Data Download topographic map, with a 2-foot contour interval, included in **Appendix A**. Topography is also shown on **Figure 2c**.

The highest elevations on the Subject Property include the backfilled pond and central mine area with maximum elevation 872 feet and 874 feet, respectively. The southern part of the Subject Property is relatively flat with elevations of about 866 to 870 feet. West of the location of the ready mix facility, the ground slopes steeply towards Starkweather Creek at elevation of about 850 feet. The elevation of the existing pond is about 846 feet as shown on **Figure 2c**. The elevation of the wetlands located east of the Subject Property is about 850 feet.

The Subject Property is shown as low-lying marshland in the 1890 and 1892 topographic maps, with a creek (later Starkweather) bisecting it (**Appendix E**). The Subject Property is shown surrounded by marshland in the 1904 and 1906 maps. The 1959 to 1983 topographic maps show marshland to the east and gravel pits on the northern half of the Subject Property.

The historical use of the northern half of the Subject Property for surface mining, unimproved roads for heavy equipment, and mine filling activities created an unnatural, changing landscape with significant variations in the topography as observed during the 2018 Phase I site inspection.

Starkweather Creek borders the northwest and west sides of the Subject Property, and discharges into Lake Monona. The south end of the Subject Property is approximately 3,500 feet northeast of Lake Monona. The apparently man-made canal extending from the existing mine pond to Starkweather Creek is not shown on any of the topographic maps.

SCS assumes that the flow direction of shallow groundwater is approximately the same as the slope of the pre-developed surface topography. Based on the topographic map, shallow groundwater flow

in the vicinity of the Subject Property is estimated to be toward Starkweather Creek or Lake Monona to the southwest. The estimated depth to shallow groundwater on the Subject Property would vary significantly depending on the location but is estimated to be approximately 5 to 10 feet below ground surface (bgs) near Starkweather Creek.

2.8 BEDROCK GEOLOGY

The EDR Radius Map Report with GeoCheck® Physical Source Summary (**Appendix C**) describes bedrock in the vicinity of the Subject Property as being from the Paleozoic Era, Ordovician System, Lower Ordovician (Canadian) Series, stratified sequence (EDR, 2022).

According to the Wisconsin Geological and Natural History Survey (WGNHS), the uppermost unit of bedrock within the vicinity of the Subject Property is Cambrian-aged quartz sandstone from the Tunnel City Group and is estimated to be approximately 70 feet bgs (WGNHS, 2013).

2.9 SOIL CONSERVATION SERVICE MAP

The EDR Radius Map Report with GeoCheck® Physical Setting Source Summary (**Appendix C**) includes a Soil Conservation Service map for the Subject Property area, with soil descriptions. Soil in the vicinity of the Subject Property is mapped as:

- Pits, gravel – stratified, extremely gravelly coarse sand to gravely sand with high infiltration rates and moderate potential to corrode uncoated steel.
- Colwood, silt loam – poorly drained silt loam with high potential to corrode uncoated steel.
- Kegonsa, silt loam – well drained silt loam with low potential to corrode uncoated steel.
- Water Greater Than 40 Acres, silt loam.
- Cut and Fill Land, variable textures – moderately well drained with a moderate potential to corrode uncoated steel.
- Dresden, silt loam – well drained silt loam with moderate potential to corrode uncoated steel.
- Grays, silt loam - well drained silt loam with moderate potential to corrode uncoated steel.
- Houghton, muck – very poorly drained with a high potential to corrode uncoated steel.
- Dodge, silt loam - well drained silt loam with moderate potential to corrode uncoated steel.

3.0 USER-PROVIDED INFORMATION

The EPA Standards and Practices for AAI as set forth in 40 CFR, Part 312, and the ASTM Standard E1527-21 section 6.1 require that the environmental professional request that the User provide the following information to the environmental professional. Ms. Jillian Hayes, Development Project Manager, Stone House Development, Inc., completed the User Questionnaire on February 21, 2022. A copy of the questionnaire is included in **Appendix A**.

The following table summarizes the responses by the Client:

Question	Response		
Did a search of recorded land title records identify any environmental liens filed or recorded against the Subject Property?	Yes ☐	No ☒	NA ☐
Did a search of recorded land title records identify any AULs that are in place at the Subject Property, or that have they been filed or recorded against the Subject Property?	Yes ☐	No ☒	NA ☐
Do you have specialized knowledge or experience related to the Property or nearby properties?	Yes ☐	No ☒	NA ☐
Does the purchase price being paid for the Property reasonably reflect the fair market value of the Property?	Yes ☒	No ☐	NA ☐
Are you aware of any commonly known or reasonably ascertainable information about the Property that would help the environmental professional to identify conditions indicative of a release or threatened release? Ms. Hayes is aware that the Subject Property was used as a farm and ready mix concrete plant. Ms. Hayes is aware of information pertaining to the Subject Property provided in Phase I and Phase II reports completed by SCS.	Yes ☒	No ☐	NA ☐
Are there any obvious indications that point to the presence or likely presence of contamination at the Property?	Yes ☐	No ☒	NA ☐

NA = Not Applicable

ASTM Standard E1527-21 section 6.2 outline the requirement of the User to review land title records and judicial records for environmental liens and activity and use limitations (AULs). To meet the requirements of 40 C.F.R. 312.20 and 312.25, a search for the existence of environmental liens and AULs that are filed or recorded against the Subject Property must be conducted. To meet this requirement, users may rely on transaction-related title insurance documentation such as Preliminary Title Reports and Title Commitments, or title search information reports such as Condition of Title, Title Abstracts, and AUL/Environmental Lien Reports, to identify environmental liens or AULs filed or recorded against the Subject Property.

SCS has requested that the User provide the results of the User-performed AUL and environmental lien search. The User has not identified any AULs or environmental liens filed or recorded against the Subject Property.

4.0 ENVIRONMENTAL RECORDS REVIEW

4.1 WISCONSIN DEPARTMENT OF NATURAL RESOURCES WEBSITE

SCS reviewed the WDNR website for locations of properties that are contaminated or have been contaminated with hazardous substances. A copy of the WDNR Contaminated and Cleaned Up Sites Map is included on **Figure 9**.

The Subject Property was identified as having three closed cases on the WDNR's Contaminated and Cleaned Up Sites Map or Bureau for Remediation and Redevelopment Tracking System (BRRTS) database. The BRRTS database contains information on the investigation and cleanup of potential and confirmed soil and groundwater contamination.

Two nearby properties, one to the west at 231 N Fair Oaks Avenue and other to the southwest at 3401 Milwaukee Street were identified by the WDNR as sites on the Contaminated and Cleaned Up Sites Map.

The identified sites are as follows:

Site Name	Site Address	Status	Note
MG&E Spill BRRTS#04-13-554484	3450 Milwaukee St Subject Property	Closed Spill	Release of mineral oil containing polychlorinated biphenyls (PCBs) in June 2009. See **Section 4.2** for details.
E C Voit & Sons BRRTS #09-13-296938	3450 Milwaukee St Subject Property	No Action Required	Tank system site assessment (TSSA) conducted during removal of underground storage tanks (USTs) in December 1998. See **Section 4.2** for details.
E C Voit & Sons BRRTS #09-13-544214	3450 Milwaukee St Subject Property	No Action Required	TSSA conducted during removal of UST in December 2004. See **Section 4.2** for details.
Seversins Unocal 76 BRRTS #03-13-000816	~207 ft. southwest of Subject Property	Closed	Petroleum impacts identified in soil and groundwater in April 1991. See **Section 4.2** for details.
Smith's Service Center	231 N Fair Oaks Ave ~299 ft west of Subject Property	Closed	TSSA conducted during removal of UST in October 1992. See **Section 4.2** for details.
Habitat for Humanity BRRTS #07-13-363281	513 Jacobson Ave Northern adjoining property	General Property	Phase II conducted in May 2000, see **Section 4.2** for details

4.2 WISCONSIN DEPARTMENT OF NATURAL RESOURCES FILE REVIEW

SCS performed a brief file review online for the BRRTS sites listed in Section 4.1. The purpose of the file review was to obtain sufficient information to determine if a REC exists on the Subject Property in connection with the site. Copies of selected documents are included in Appendix D.

Madison Gas and Electric (MG&E) Spill

The WDNR records show that a power pole with a 3-phase transformer snapped on June 18, 2009, during a storm. The transformer contained mineral oil with PCBs. An estimated 22 gallons of oil were released to the ground surface when the transformer ruptured. MG&E was identified as the responsible party.

An excavation approximately 7-feet in diameter and 15-inches deep was performed on June 22, 2009. Ten 55-gallon drums of dirt and vegetation were removed and disposed by MG&E. The transformers and equipment were no longer in use and were removed from the site by MG&E. The WDNR closed the spill case in November 2009.

E C Voit & Sons (1998 Tank System Site Assessment)

One 6,000-gallon gasoline UST and one 10,000-gallon diesel UST were closed/removed from the southwest end of the Subject Property near the former ready mix office building (**Figure 10**) in December 1998. Petroleum-contaminated soil was not detected in the closure assessment soil samples. Sample locations are shown in **Figure 11**. A tank closure assessment report was submitted to the WDNR in April 1999. No action was required by the WDNR.

The closed UST case from 1998 is not identified as a REC for the Subject Property as the TSSA did not identify impacts, and the No Action Required status determined by the WDNR. A copy of the 1998 TSSA is included in **Appendix D**.

E C Voit & Sons (2004 Tank System Site Assessment)

One 7,000-gallon fuel oil UST was closed/removed from the southwest end of the Subject Property near the former ready mix office building (**Figure 12**) on June 29, 2004. Petroleum-contaminated soil was not detected in the closure assessment soil samples. Sample locations are shown in **Figure 13**. A tank closure assessment report was submitted to the WDNR in September 2004. No action was required by the WDNR.

The closed UST case from 2004 is not identified as a REC for the Subject Property as the TSSA did not identify impacts, and the No Action Required status determined by the WDNR. A copy of the 2004 TSSA is included in **Appendix D**.

Seversins Unocal 76

Soil borings installed in connection with a property transfer identified soil contamination at a shared property boundary with the gasoline station at 3401 Milwaukee Street, indicating the contamination was from the gasoline station. The existing UST system was upgraded in 1996; during the upgrade petroleum impacted soils were removed. Soil was sampled during the UST system upgrades; the extent of soil contamination is limited to the gasoline station property. Groundwater wells were installed and groundwater quality was monitored from 1996 through 2004. Petroleum impacts to groundwater are limited to the gasoline station property and the property to the south. Groundwater flow was measured to the southeast, towards Starkweather Creek.

Residual petroleum impacts from the Seversins Unocal 76 closed leaking underground storage tank (LUST) case is not likely to impact the Subject Property due to separating distance and the Subject Property is upgradient. Select case file documents are provided in **Appendix D**.

Smith's Service Center

One 560-gallon waste oil UST was removed from Smith's Service Center at 231 N Fair Oaks Avenue in October 1992. The 231 North Fair Oaks Avenue parcel is a small triangle of land located next to the street. The parcel does not extend to the Subject Property border.

Elevated levels of total recoverable petroleum hydrocarbons (TRPH) were detected in soils collected during the tank removal. A background sample was collected following the tank removal on the

adjacent property to the west (western adjoining property to the Subject Property) (**Figure 14**). The TRPH results were higher in this sample than that of the UST tank bed and believed to be from the past use of the property; the property has been used for spraying waste oil on cement forms for many years. Additional soil sampling was performed around the UST tank bed for analysis of petroleum volatile organic compounds (PVOCs) and diesel range organics (DRO). Results were generally non-detect or below RCLs. The WDNR determined that the petroleum contamination on the Smith Service Center was not significant and closed the site.

Residual petroleum impacts from the Smith's Service Center LUST case are not likely to impact the Subject Property due to minor impacts and separating distance from the Subject Property. Select case file documents are provided in **Appendix D**.

During the interview conducted for the 2018 Phase 1, Mr. Voit said that the Voit family formerly owned the 219 North Fair Oaks parcel, which does adjoin the Subject Property across Starkweather Creek. He said that his family was not involved with pouring concrete, and would not have owned concrete forms or stored them on the parcel. City Directories list Crete Co. (a concrete product manufacturer) at 221 North Fair Oaks Avenue between 1960 and 1992. The address was likely located on the 219 North Fair Oaks Avenue parcel.

Habitat for Humanity

According to case file documents, a Sinclair gas station and or lubrication warehouse was located on the northeast corner of the property in the 1950s and two 1,000-gallon USTs were reportedly removed in the 1960s. In April 2000, BT Squared (BT^2) performed an ESA and oversaw the installation of soil borings and test pits. The soil borings and test pits locations are shown on **Figure 15**. Non-native fill soil and materials, including cinders, were observe in soil borings and test pits. BT^2 collated soil samples for analysis of DRO, gasoline range organics (GRO), VOCs, metals, and PAHs. DRO, GRO, and VOCs were not detected about NR 720 RCLs. Metals were detected above RCLs, but mostly below the background threshold value (BTV). PAHs were detected above NR 720 RCLs to depths up to 7 feet bgs.

BT^2 sampled groundwater for VOCs and PAHs. No VOCs exceeded NR 140 standards and were generally not detected. Two PAHs exceeded their respective NR 140 ESs, but these concentrations were likely elevated due to sediment laden samples. BT^2 submitted results of the Phase II to the WDNR in June 2000 and July 2002. In July 2002, the WDNR determined no further action is necessary at the site unless residual contamination is uncovered or removed.

The residual contamination is not identified as a REC for the Subject Property due to the nature of the contaminants presents, and separating distance. Select case file documents are included in **Appendix D**.

4.3 WISCONSIN PETROLEUM / HAZARDOUS LIQUIDS STORAGE TANK DATABASE

SCS reviewed the Wisconsin Petroleum / Hazardous Liquids Storage Tank Database for the Subject Property addresses.

The Subject Property was identified in the database as having closed storage tanks and in use storage tanks. The identified tanks are as follows:

Property Address	Tanks	Status	Note
3450 Milwaukee Ave	Two 1,000-gal. diesel ASTs	In Use	Installation date unknown
	1,000-gal. diesel UST 1,000-gal. unleaded gasoline UST 6,000-gal. unleaded gasoline UST 7,000-gal. fuel oil UST 10,000-gal. diesel UST	Closed/ Removed	The 6,000-gal. unleaded gasoline and 10,000-gal. diesel USTs removed in 1998 and 7,000-gal. Fuel oil UST removed in 2004. These tanks had a TSSA performed when removed, see **Section 4.2** for details.

The database did not identify two approximate 500-gallon capacity portable diesel aboveground storage tanks (ASTs) observed northeast of the office on February 10, 2022, during the site inspection conducted by SCS. The tanks are operated by the current tenants.

The western adjoining property at 219 N Fair Oaks Avenue was identified in the database as having one 2,000-gallon diesel AST that was closed/removed in 2001.

Petroleum storage tank records are provided in **Appendix D**.

4.4 ENVIRONMENTAL DATABASE REPORT

EDR reviewed state, tribal, and federal environmental databases to identify sites with known or potential contamination located on the Subject Property and on properties located near the Subject Property. The EDR report, dated January 18, 2022, is included in **Appendix C**.

EDR searches a specific minimum distance from the Subject Property for each environmental database, as defined by the ASTM E 1527-13. A list of all the databases reviewed, the minimum search distance used, the number of sites located within defined distances, maps showing the location of the identified sites, and detailed information pertaining to each site are included in the EDR report.

The following environmental databases and acronyms are used in the Subject Property discussion. See the EDR database report (**Appendix C**) for a full list of databases searched for evaluation of the Subject Property.

National Databases and Acronyms		
RCRA	Resource Conservation and Recovery Act	Lists hazardous waste handling sites that have undergone RCRA corrective action.
RCRA-NonGen/NLR	RCRA Non-Generators/No Longer Regulated	Identifies sites that are not currently generating of hazardous waste.

National Databases and Acronyms		
FINDS	Facility Index System/Facility Registry System	FINDS contains both facility information and 'pointers' to other sources that contain more detail. FINDS databases include: PCS (Permit Compliance System), AIRS (Aerometric Information Retrieval System), DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes), FURS (Federal Underground Injection Control), C-DOCKET (Criminal Docket System used to track criminal enforcement actions for all environmental statutes), FFIS (Federal Facilities Information System), STATE (State Environmental Laws and Statutes), and PADS (PCB Activity Data System).
ECHO	Enforcement & Compliance History Information	Provides integrated compliance and enforcement information for about 800,000 regulated facilities nationwide.
US BROWNFIELDS	A listing of Brownfields Sites	Information reported by EPA Brownfields grant recipients on brownfield properties assessed or cleaned up with grant funding.

State Databases and Acronyms		
BRRTS	Bureau of Remediation and Redevelopment Tracking System	The web-based WDNR tracking system for contaminated sites.
SHWIMS	Solid & Hazardous Waste Information Management System	Information on sites, and facilities operating at sites, that are regulated by the Waste Management program.
UST/AST	Storage Tank Database	WDATCP list of registered underground storage tanks and aboveground storage tanks.
LUST	Leaking Underground Storage Tank Sites	WDNR list of all leaking underground storage tank sites.
SPILLS	Spills Summary Report	WDNR list of sites where hazardous substances were discharged. Spills are usually cleaned up quickly and the files are closed without significant follow-up.
CRS	Closed Remediation Site	A parcel of land at which the groundwater has become contaminated and which is affected by a particular type of restriction. Certain steps have been taken to stabilize/remediate the contamination, and the state is satisfied that no further efforts are necessary provided that the property is not used for certain purposes.

State Databases and Acronyms		
AUL	Deed Restriction at Closeout Sites	Date a deed restriction is recorded at the Register of Deeds office for a property. Extent of soil contamination is known but impractical to remove now or an engineering control is required to be maintained of NR 720 industrial standards are applied. Restricts property use or requires future action.
Financial Assurance	Financial Assurance Information Listing	Financial assurance for USTs.

EDR Exclusive Databases		
EDR His Auto	EDR Exclusive Historical Auto Stations	EDR listing of potential gas station/filling station/service station sites that were available to EDR.

4.4.1 Database Listings for the Subject Property

The Subject Property is identified on the following databases:

Database Listing for the Subject Property				
Site Name	**Site Address**	**Database**	**Site Status**	**Note**
E C Voit & Sons Inc	3450 Milwaukee St	UST	Closed/ Removed	1,000-gal. diesel 1,000-gal. unleaded gasoline 6,000-gal. unleaded gasoline 7,000-gal. fuel oil 10,000-gal. diesel
		AST	In Use	Two 1,000-gal. diesel
		SPILLS	Closed	See **Section 4.2** for case details
		BRRTS	No Action Required	USTs removed in 1998 and 2004, TSSAs were performed. See **Section 4.2** for case details

4.4.2 Database Listings for Adjoining and Nearby Properties

The following sites are discussed for reasons that may include their proximity to the Subject Property, their possible upgradient location from the Subject Property based on the estimated groundwater flow direction, the type of contaminant released, the estimated depth to groundwater, and the status of the site.

Database Listing for Adjoining and Nearby Properties				
Site Name	**Site Address**	**Database**	**Status**	**Note**
Myron Simpson	101 N Fair Oaks Ave ~95 ft. west of Subject Property	UST	Closed/ Removed	500-gal. fuel oil, closed/removed in 1996.
Jacobson-Furey	513 Jacobson Ave Northern adjoining property	US Brownfields		Property was acquired by the City of Madison for construction of stormwater treatment ponds and access for the Capital City Bike Path. The property was formerly used by Sinclair Oil as either a gas station or lubrication warehouse. Two 1,000-gal. USTs were removed from the property in the 1950s and a railroad spur passes through it. A Phase II ESA was performed on the property in 2014. Soils impacted with lead, petroleum, VOCs, and PAHs identified. Groundwater was not impacted.
Habitat for Humanity	513 Jacobson Ave Northern adjoining property	Brownfields		Associated with BRRTS case #07-13-363281.
		BRRTS		Phase II ESA conducted on property in May 2000 identified residual soil contamination impacted with DRO and PAHs from approximately 3 to 9 feet bgs. The WDNR determined no action was required at the site in July 2002. See **Section 4.2** for case details.
Seversins 76	3401 Milwaukee St ~207 ft. southwest of Subject Property	EDR Hist Auto	Last Listed in 2014	Listed as an gasoline station and automobile repair shop from 1971 to 2014.

Database Listing for Adjoining and Nearby Properties				
Site Name	**Site Address**	**Database**	**Status**	**Note**
Go 2 Stop Inc	3401 Milwaukee St ~207 ft. southwest of Subject Property	LUST	Closed	Petroleum contamination identified in soil and groundwater, BRRTS #03-13-00816, Seversins Unocal 76. Impacts to soil limited to the subject property; petroleum contaminated groundwater on subject property flowing towards Starkweather Creek. Petroleum impacts not identified on or near Subject Property. See **Section 4.2** for case details.
		UST	In Use	8,000-gal. diesel 10,000-gal. unleaded gasoline 12,000-gal. unleaded gasoline All installed in 1996
			Closed/ Removed	550-gal. waste/used motor oil, closed/removed in 1996. 1,000-gal. unleaded gasoline, closed/removed in 1995. 4,000-gal. diesel, closed/removed in 1996. 8,000-gal. unleaded gasoline, closed/removed in 1996.
		AST	In Use	550-gal. waste/used motor oil, installed in 1996.

SCS evaluated the EDR report in conjunction with information obtained through the site inspection, historical record review, and interviews. None of the other identified sites are likely to impact the Subject Property based on factors that could include the following:

- The identified site's location relative to the Subject Property.
- The status of the identified site.
- The estimated groundwater depth on the identified site and on the Subject Property.
- The estimated groundwater flow direction on the identified site relative to the Subject Property.
- The database listing is for a permitted use or activity with no violations or releases reported.

4.5 VAPOR ENCROACHMENT

The ASTM E2600-15 Standard Guide for Vapor Encroachment Screening on Subject Property Involved in Real Estate Transactions provides an estimate for the lineal distance in any direction that vapors from contaminated soil and/or groundwater may migrate. The critical distance for vapors from VOCs, like chlorinated solvents, is 100 feet. The critical distance for vapors from dissolved petroleum products is 30 feet, and 100 feet for non-aqueous liquid (free product). Vapors can migrate more easily through sandy soil than through clayey and silty soils. The critical distance does not take preferential pathways, like utility corridors where vapor migration may be less constrained, into consideration.

Groundwater monitoring wells were installed on the adjoining property to the east, and groundwater was sampled in 2017 & 2018 (Section 5.3). PCE was detected in groundwater above NR 140 standards in a well that is upgradient and close to the Subject Property line. Analysis of soil and groundwater samples performed for the 2018 Phase II did not detect VOCs in the vicinity of the monitoring well on the adjoining property where PCE was detected. Vapor encroachment is a concern for the Subject Property from PCE impacts in groundwater on the adjoining property.

5.0 HISTORICAL LAND USE RECORDS

In accordance with ASTM E1527-13 and the AAI rule, reasonably ascertainable historical records were reviewed, and an attempt was made to interpret the historical land use back to the obvious first developed use of the Subject Property.

The following table summarizes the historical resources reviewed.

5.2 CHRONOLOGICAL HISTORY OF THE SUBJECT PROPERTY

The following table presents a chronology of the Subject Property based on the historical records. Copies of the historical records are included in **Appendix E.**

Chronological History of the Subject Property		
Years	**Description**	**Sources**
1890 - 1906	The maps show the Subject Property as vacant land located between the Chicago, Milwaukee, and Saint Paul Railroad corridor, and a road that is in the general vicinity of Milwaukee Street. In 1890 and 1892 the land is shown as a marsh or swamp with a creek flowing through it. In 1904 and 1906, most of the Subject Property is shown as higher ground with an elevation of approximately 870 feet. The creek is shown closer to the railroad corridor. The marsh or swamp is on the east and west sides of the Property. The parcel at 3490 Milwaukee Street is shown with a structure in the 1904 and 1906 maps.	Topographic Maps
1937-1955	Disturbed ground and unimproved roads associated with surface mining are shown at the northern half of the Subject Property, and a small pond is visible. The southern half of the Subject Property was in agricultural use and the farmhouse at 3490 Milwaukee Street is shown in the 1937 aerial. Some of the structures appear to be present today. An unimproved road crosses the western half of the Subject Property connects Milwaukee Street to the surface mining area. Ground disturbance is visible where the ready mix facility is located. The residential home at 3510 Milwaukee Street is present by 1955. City Directory Listings: 1941, George Voit and Erhardt C Voit sand and gravel are listed without address numbers. 1946, Erhardt Voit C sand and gravel is listed at 3490 Milwaukee St. 1950, Preston Campbell is listed at 3420 Milwaukee St and Erhardt Voit C and Voit E C & Sons concrete ready mix are listed at 3490 Milwaukee St. 1954, This Campbell is listed at 3420 Milwaukee St, Erhardt Voit C and Voit E C & Sons concrete are listed at 3490 Milwaukee St, and Richard E Voit is listed at 3510 Milwaukee St.	Topographic Maps Aerial Photos City Directories

1955 - 2006	Starkweather Creek has been re-routed from its more southern location to the northwest border of the Subject Property along the railroad corridor. Surface mining has expanded and the pond is larger. A linear feature that may be the railroad spur extends from the surface mining area across Starkweather Creek to the railroad corridor near the north tip of the Subject Property. Structures are visible in the ready mix facility area. Gravel pits are shown on the Subject Property in the 1959, 1969, 1974, and 19893 topographic maps. An unimproved road connects the Voit family farmstead with the ready mix facility. Surface mining had expanded onto the 8.0-acre Subject Property parcel where the second pond was present. The 1976 aerial shows an unimproved road leading from surface mining areas on the Subject Property, across the adjoining property to the east where there is currently a grassy wetland, toward a drainage ditch/intermittent stream. There are light-colored circular features at the end of the road. The road is not apparent in the 1980 aerial but the circular objects are visible. By the late 1980's surface mining on the Subject Property appears to be reduced. Disturbed ground around the pond on the 8-acre Subject Property parcel may reflect the last dredging of sand and gravel. The southern half of the Subject Property remains unchanged. City Directory Listings: 1960, Erhardt Voit C and Voit E C & Sons Inc ready mix concrete are listed at 3490 Milwaukee St, and Richard E Voit is listed at 3510 Milwaukee St. 1966 and 1970, Sarah Voit C and Voit E C & Sons Inc ready mix concrete are listed at 3490 Milwaukee St, and Richard E Voit is listed at 3510 Milwaukee St. 1975, Voit E C & Sons Inc ready mix concrete is listed at 3490 Milwaukee St and Richard E Voit is listed at 3510 Milwaukee St. 1980, 1985, and 1989, Voit E C & Sons Inc ready mix concrete is listed at 3450 Milwaukee St and Richard E Voit is listed at 3510 Milwaukee St. 1992, Voit E C & Sons listed at 3450 Milwaukee St., Sarah Voit is listed at 3490 Milwaukee St, and Richard Voit is listed at 3510 Milwaukee St. 1995, EC Voit & Sons Ready Mix is listed at 3450 Milwaukee St, Sarah Voit is listed at 3490 Milwaukee St, and Mark Rowin is listed at 3510 Milwaukee St. 2000, Mark Rowin and Sarah Voit are listed at 3510 Milwaukee St.	Topographic Maps Aerial Photos City Directories

Chronological History of the Subject Property		
Years	**Description**	**Sources**
	2005, EC Voit & Sons Inc is listed at 3450 Milwaukee St, Dennis Anderson is listed at 3490 Milwaukee St, and Mark Rowin is listed at 3510 Milwaukee St.	
2006 – present	The pond on the 8.0-acre Subject Property parcel is filled in by 2006. The ground surface on the filled pond has an irregular surface. The Ready Mix facility ceased operation in 2020. The southern half of the Subject Property remains unchanged. City Directory Listings: 2010, 2014, and 2017, EC Voit & Sons Ready Mix is listed at 3450 Milwaukee St, Arthur Voit is listed at 3490 Milwaukee St, and Mark Rowin is listed at 3510 Milwaukee St.	Topographic Maps Aerial Photos City Directories

5.3 HISTORICAL USE SUMMARY OF THE SUBJECT PROPERTY

5.3.1 Voit Family Farm

The Subject Property was part of a larger property that has been owned, managed, and occupied by the Voit family for approximately 150 years and originally operated as a family-owned, primarily dairy farm. In an interview conducted for the 2018 Phase I, the Subject Property owner Mr. Tom Voit, told SCS that the Voit family land originally extended along the south side of US Highway 30 to US Highway 51. It also included the land where the Post Office was constructed at the intersection of Milwaukee Street and US Highway 51. He said that in the 1950s, his grandfather sold part of the Voit family land that adjoined the 8.0-acre Subject Property parcel to Mautz Paint. The Voit family also owned the adjoining property to the west at 219 North Fair Oaks Avenue, across Starkweather Creek.

The Voit farmstead is located at 3490 Milwaukee Street. The agricultural fields adjoining the farmstead have been leased for row crops. Corn and soybeans have been planted on a rotational schedule. The original farmhouse was demolished in the 1940s and a replacement farmhouse was built closer to Milwaukee Street. A residential home was built at 3510 Milwaukee in about 1955.

5.3.2 Concrete Ready Mix Plant

The Voit family built a ready mix facility at the southwest corner of the Subject Property in 1948. The ready mix facility operated through 2020. A railroad spur extended from the railroad tracks that border the northwest side of the Subject Property to the northwest corner of the surface mining area. The railroad spur is shown on the 1959 through 1983 topographic maps. The spur allowed Portland cement for the ready mix facility to be delivered in rail cars. Culverts were constructed so the rail spur could cross over Starkweather Creek. The Portland cement was hauled by truck to a silo at the ready mix facility. The culverts and remnants of the spur are still present.

5.3.3 Mining and Dredging

The northern half of the Subject Property was surface mined for sand and gravel starting in the 1930s. Surface mining ended approximately 50 years ago but dredging of sand and gravel on the northern half of the Subject Property continued into the early 1990s. Mining and dredging operations created two ponds, and a central mine area south of the ponds. In the recent interview with SCS, Mr. Voit said that the existing pond was about 85 feet at the deepest, but that sediment has filled it in to about 50 feet; it is spring-fed, and was stocked with fish.

The central mine areas was the most recent area where sand and gravel mining occurred. Based on review of the historic air photos, this area was not mined prior to 1968, but by 1974 was extensively mined. By 1980 the mining had extended to the north side of the agricultural field where a steep pit wall was present. By 1986 some backfilling had occurred.

5.3.4 Starkweather Creek Relocation

Starkweather Creek was formerly located on the northwest corner of the Subject Property. The former channel is visible on recent air photos (**Figure 2.a**). Based on review of historic air photos the creek was relocated to its present location between 1949 and 1955.

5.3.5 Backfilling of Mined Areas

In 2005 the Voit's contacted the WDNR in regard to the two ponds on the northern part of the Subject Property. The WDNR issued a letter dated May 19, 2005, stating that Pond #1 (the pond nearest Starkweather Creek) is connected to Starkweather Creek by a channel. Due to the connection with Starkweather Creek, a Chapter 30 permit was needed prior to filling the pond or modifying the pond or channel.

Based on the review of historic air photos, the channel that connects the pond to Starkweather Creek was dug between 1949 and 1955. In 1955 the pond was much smaller in areal extent and may not have been connected to the channel.

The WDNR noted that Pond #2 (on the 8.0-acre Subject Property parcel) was not connected to Pond #1 or to Starkweather Creek, so filling the pond was not within the Department's jurisdiction as it pertained to Chapter 30, Wisconsin Statutes. The letter said that filling the pond could continue as long as other State and local requirements were met. A copy of the letter is included in **Appendix A**.

The eastern pond was filled in from 2006 to 2010. Overfilling in the eastern pond area created a mound that is approximately 20 feet higher than the adjacent wetlands. According to Mr, Voit the fill material came from road construction projects in the City of Madison. Mr. Voit did not did not provide any records of sources of the fill material or analytical testing, but he believes they have documentation in their files.

The central mine area was filled from approximately 2010 to 2015, reportedly with material from City of Madison road construction projects. Filling in the central mine area has brought that area up to a few feet higher than the adjacent agricultural fields.

Contamination has been documented in some of the non-native fill soils and materials used for backfill. Soil mounds and debris are present on other areas of the Subject Property including the low areas near Starkweather Creek.

5.4 CHRONOLOGICAL HISTORY OF ADJOINING PROPERTIES

The following table presents a chronology of the adjoining properties based on the historical records. Copies of the historical records are included in **Appendix E.**

Description	Sources
City of Madison Starkweather Park, unaddressed, east of Subject Property The 1890 through 1983 topographic maps shown marsh or swamp on the property. The property was farmed from the 1930s through 1950s, as part of the Voit family farm, and then vacant grass/marsh land. In the 1950s, the property was sold to Mautz Paint. Access roads and disturbed land are shown near the sand and gravel pit on the Subject Property from the 1950's through the 1980's. The City of Madison purchased the property in approximately 2005 and turned it into Starkweather park. The property has never been developed.	Topographic Maps Aerial Photos
Residential Homes (3449-3509 Milwaukee Street) and SS Morris Community AME Church (3511 Milwaukee Street), south of Subject Property The 1890 and 1892 topographic maps shown marsh or swamp on the properties. A few properties were developed as early as 1904 as shown in the topographic map and much of the land was likely agricultural. More residential homes and side streets are established by the 1930s. By the early 1940s, the residential neighborhood south of Milwaukee Street is established. By 1970, the property at 3511 Milwaukee Street was redeveloped from a residential home into a Church. Calvary Gospel Church was listed in the 1970 through 1985 City Directory. SS Morris Community Church was listed in the City Directory starting in 1989. A cross symbol is present on the 1983 topographic map at 3511 Milwaukee Street indicating a church is present.	Topographic Maps Aerial Photos Sanborn Maps City Directories
City of Madison, 3412 and 3425 Milwaukee Street, southwest of Subject Property The 1890 through 1906 topographic maps show marsh or swamp on the properties. Properties are shown as undeveloped grassland from the 1930s to present. The properties are not listed in the City Directories and are currently owned by the City of Madison for engineering corridors.	Topographic Maps Aerial Photos

Description	Sources
Residential Homes (9-33 N Fair Oaks Ave), Marine Tops Unlimited (219 N Fair Oaks Ave), and Stock-N-Lock (251 N Fair Oaks Ave), west of Subject Property The 1890 through 1906 topographic maps show marsh or swamp on the properties. By the 1930s, the residential homes near the intersection of Milwaukee Street and Fair Oaks Avenue (9-33 N Fair Oaks Ave) are present. No land use or significant changes occur to these properties from the 1930s to present. The parcel at 219 N Fair Oaks Avenue is agricultural in use through approximately the 1950s. Disturbed land is shown in the 1955 and 1962 aerial photographs, and the parcel is developed by the late 1960s. A transportation and trucking company operates at the property under Fruehauf Trailer Company (sales), Madison Truck & Trailer Center (truck dealers), Yerges Transportation (truck leasing) through the late 1980s, followed by ARS Hauling (trucking) and ARS Refinishing (sandblasting) through the late 1990s, Dr. Performance (autobody repair and painting) in the early 2000s, and marine service under East Side Service and Marine Tops Unlimited. The parcel at 251 N Fair Oaks Avenue is agricultural in use through approximately the 1940s. The parcel is developed by the late 1940s with a building at the far east end of the property and is listed as Hanson Wrecking (building wreckers) in the 1950 through 1954 City Directories followed by Madison Moving and Wrecking (building wreckers) from 1960 to 1966. Acme Welding and Drive Line (welders) is listed in the 1970 through 1995 City Directories and Ace Vinyl Top & Body Shop is listed in the 1975 through 1995 City Directories. Acme Automotive Center and Storage is listed in the 2000 City Directory followed by Stock-N-Lock in 2005.	Topographic Maps Aerial Photos City Directories
Residential Homes, 502 Jacobson Avenue and 3509 Webb Avenue, northwest of Subject Property The 1904 and 1906 topographic maps show marsh or swamp on the properties. The properties are developed from grassland/agricultural land starting in the late 1940s into residential homes. The residential neighborhood to the northwest of the Subject Property across the railroad tracks is well developed by the mid-1950s.	Topographic Maps Aerial Photos City Directories

Description	Sources
City of Madison, 513 Jacobson Avenue, north of Subject Property The 1904 and 1906 topographic maps show marsh or swamp on the property. The northwestern most half of the property is developed by the 1930s, appears to be commercial in use with at least two buildings. The 1955 aerial photographs shown an area of disturbed land at the far northeast corner of the property, with reported use by Sinclair Oil. By the late 1960s, building at the north end of the property is demolished and a new structure is built at the southwestern half of the property. The property is grazed and two stormwater retention ponds are constructed in approximately 2019. The City of Madison and others have completed environmental assessments of this property for potential brownfields redevelopment, which has not happened.	Topographic Maps Aerial Photos 1994 Phase I ESA

5.5 HISTORICAL USE SUMMARY OF THE ADJOINING PROPERTIES

East

The eastern adjoining property has never been developed. The property was originally farmed by the Voit family and sold to Mautz paint in the 1950s. During that time, there were some roads or paths visible, but no structures. The City of Madison took ownership of the property in approximately 2005 and converted it into a park (Starkweather Park). In 2017, the City of Madison installed four groundwater monitoring wells adjacent to the 8.0-acre jut-out parcel of the Subject Property parcel in 2017 (Figure 16). The shallow water table wells were sampled by the City on four dates between October 2017 and January 2018. The City of Madison Engineering Division provided the results to Mr. Voit in a letter dated February 9, 2018. A copy of the letter is included in the 2018 Phase I, Appendix B. The letter states that groundwater flows generally from the northeast toward the southwest, toward Starkweather Creek. The City provided a table that summarized the analytical results for detected metals, and VOCs. Additional testing was reportedly completed for PAHs without detections.

Arsenic was detected in MW1 at a concentration greater than the NR 140 ES. Nickel was detected in MW1 and MW2 at concentrations greater than the PAL and less than the ES. PCE was detected in one well, MW4, at concentrations greater than the PAL and less than the ES. The results were reported to the WDNR. The WDNR response required no further action at that time.

The detection of contaminants in groundwater near and upgradient from the Subject Property is a REC.

The letter states that it is common practice for the city to perform Phase I ESA and Phase II ESAs when purchasing a commercial or industrial property, and it is common for low-level or "incidental" contamination to be detected in non-residential property. The City requested to perform a Phase I ESA and likely a Phase II ESA on the property at the City's expense. Those activities were completed in 2018 (Section 2.4)

South

The southern adjoining properties comprise of a series of residential homes (3449-3509 Milwaukee Street) and a community Church (3511 Milwaukee Street) south of Milwaukee Street. The residential homes and neighborhood were developed starting in the early 1940s and was well established by the mid-1950s. Prior to development of the neighborhood, the southern adjoining properties were undeveloped low-lying land that was partially agricultural. Development of some portions of the southern adjoining properties began as early as 1904 and likely comprised of residential homes or farmhouses. These early developments likely used coal or fuel oil.

The property at 3511 Milwaukee Street was redeveloped from a residential home into a church in approximately 1970. Calvary Gospel Church operated at the property from approximately 1970 to 1985 followed by SS Morris Community Church, who currently operates at that parcel.

Southwest

The southwest adjoining properties are undeveloped grass lots owned by the City of Madison as stormwater engineering corridors adjacent to Starkweather Creek. The properties have never held structures.

West

The western adjoining properties comprise of residential homes near the intersection of Fair Oaks Avenue and Milwaukee Street and commercial properties further north. Additional residential and commercial properties adjoin further north. Starkweather Creek separated these properties from the Subject Property.

The properties appear to have been low-lying marsh or swamp lands in the late 1800s and early 1900s. Residential homes were developed by the 1930s. Fuel oil may have been used at these homes. These parcels did not undergo significant change or land use since development.

The parcel at 219 N Fair Oaks Avenue was originally farmland owned by the Voit family. The property was developed by the late 1960s and used for trucking sales under Fruehauf Trailer Company, Madison Truck & Trailer Center, and Yerges Transportation through the late 1980s. The property continued to be used as trucking sales along with sandblasting and autobody repair and paining from the late 1980s through the early 2000s under ARS Hauling and Refinishing and Dr. Performance. A portion of the property was likely used in concrete manufacturing. According to City Directory listings, Crete Co., a concrete product manufacture, was listed at 221 N Fair Oaks Avenue from 1966 to 1992. This address was likely located on the 219 N Fair Oaks Avenue parcel. According to the Smith's Service LUST case file (Section 4.2), the 219 N Fair Oaks Avenue property has been used for spraying waste oil on cement forms for many years. Most recently, East Side Service and Marine Tops Unlimited have been operating at the property performing marine service, specifically specializing in custom boating covers. An AST in secondary containment was observed on the parcel.

The parcel at 251 N Fair Oaks Avenue was developed from agricultural land by the late 1940s with a building at the far east end of the property. Building wreckers, under Hanson Wrecking and Madison Moving and Wrecking, operated at the property through the late 1960s, followed by Acme Welding and Drive Line through the mid-1990s. An automotive body shop also operated on the property from the mid-1970s through mid-1990s. From approximately the mid-1990s, the property has been used as a storage center.

Northwest

The residential homes to the northwest of the Subject Property across the railroad tracks were developed from grass or farmland starting in the late 1940s, and the surrounding residential neighborhood was well established by the mid-1950s. These parcels did not undergo significant change or land use since development.

North

The northern adjoining property lies across the railroad tracks from the Subject Property and is owned by the City of Madison as an engineering corridor. Historical information provided by EDR is limited for this property, however, SCS obtained a copy of a Phase I ESA performed on the property in 1994, which was used to supplement historical gaps. Select pages from the Phase I ESA are included in Appendix E.

The parcel at 513 Jacobson Avenue, near the northern tip of the Subject Property and just across Starkweather Creek and the railroad line, was partially developed as far back as the 1930's. The area was bisected in the 1940's by the construction of Highway 30, though it still appeared to be active commercially for some time, until recently for the southern portion, and through the 1970's for the northern (eastern) portion.

The northwestern most half of the property is developed from grass and/or farmland into a residential home by the 1930s. The home was reportedly heating with coal. The 1955 aerial photographs shown an area of disturbed land at the far northeast corner of the property and according to the 1994 Phase I, low areas were reportedly filled with concrete and asphalt from old roads.

By the late 1960s, the home at the north end of the property was demolished and a new structure was built at the southwestern half of the property. This building was heated with a fuel oil AST and converted to natural gas in the 1990s. Foley Equipment Company occupied this building from 1965 through 1967 and operated an automobile repair shop. For approximately 8 years during the 1980s, the property was used to store building materials for Four Seasons Builders. Starting in 1987, for approximately 6 months, the property was leased to Jeff Bailey who operated a one-man automobile repair business and reportedly collected waste oil, transmission fluid, and break fluids that were contained in 55-gallon drums. Rodell Auto operated at the property starting in 1994 primarily performing body work on State owned vehicles. The body work included sanding, spraying, and using paint thinner. Information is not available for how long Rodell Auto operated on the property.

In 2000, an environmental investigation was performed and a series of borings and test pits were installed on the northeastern half of the property. Results from the investigation are summarized in Section 4.2.

In approximately 2019, the property was razed and the City of Madison constructed two stormwater retention ponds.

6.0 SITE RECONNAISSANCE

6.1 METHODOLOGY AND LIMITING CONDITIONS

Mr. Tony Kollasch of SCS performed the Subject Property inspection and reconnaissance on February 10 and 21, 2022. The weather at the time of the inspection was cool and partly cloudy. Photographs taken during the site inspection are included in **Appendix F**.

Mr. Tom Voit, representing the Subject Property owner and provided access to the site. There were limitations to the site inspection. SCS was unable to fully assess surface conditions of the Subject Property as the ground was covered with several inches of snow. SCS was also unable to inspect the interior of the residence at 3510 Milwaukee Street due to health and safety concerns as the resident was ill. SCS was able to inspect the exterior of the residence on February 21, 2022.

The northern half of the Subject Property was inspected and assessed during the 2018 Phase I and Phase II ESAs. Site conditions of the northern half of the Subject Property performed at that time will be used in conjunction with those observed during the February 2022 inspection.

6.2 SUMMARY OF SUBJECT PROPERTY INSPECTION OBSERVATIONS

The Subject Property inspection observations are summarized below.

Summary of Subject Property Inspection Observations			
Potential Environmental Concern	**Observed**	**Not Observed**	**Notes**
Hazardous Substances in Connection with the Subject Property Use	☒	☐	Hazardous substances were observed, primarily indoors related to the ready mix buildings and in retail (5 gallon or less) packaging, and including an old parts washer. No staining was observed.
Petroleum Products in Connection with the Subject Property Use	☒	☐	Petroleum products were observed, including four ASTs (two fixed, two mobile), all appeared to be in good condition.
Aboveground or Underground Petroleum Storage Tanks (ASTs/USTs)	☒	☐	No USTs were observed. Petroleum ASTs were observed near the ready mix buildings. Two of the tanks were mobile (on wheels), and along with another were related to a tenant use of the property in snowplowing season. The fourth AST was located northwest of the ready mix tower and appeared in good condition. Mr. Voit indicated that an AST was located near two former USTs that had been removed years ago.

Summary of Subject Property Inspection Observations			
Potential Environmental Concern	**Observed**	**Not Observed**	**Notes**
Suspect Containers Not in Connection with Subject Property Use	☒	☐	Numerous empty containers were observed in the farm barn and inside buildings. Mr. Voit indicated that the drums and tank observed inside the farm barn were used as floats for the dredge equipment in the pond. They kept a stock of containers for that use. Other containers were small in size without indications of significant release.
Electrical or Mechanical Equipment Likely to Contain PCBs	☐	☒	Equipment likely to contain PCBs was not observed. No evidence of the three damaged and remediated PCB transformers south of the pond was observed (**Section 4.2**).
Exterior or Interior Stains or Corrosion	☐	☒	Stains or corrosion were not observed.
Drywells, Drains or Sumps	☐	☒	Drywells, drains, or sumps were not observed.
Process Wastewater Discharges	☐	☒	Wastewater discharges from a process performed on the Property were not observed.
Septic or Sewage Tanks	☐	☒	Septic or sewage tanks were not observed. The Property has municipal sanitary sewer service. Mr. Voit indicated that the farm house has a cistern (under snow north of the house) used for stormwater.
Pits, Ponds or Lagoons	☒	☐	A large pond is present in the northern part of the Subject Property, remnants of a sand and gravel mining present there.
Pools of Liquid or Standing Water	☐	☒	Pools of liquid or standing water were not observed.

Summary of Subject Property Inspection Observations			
Potential Environmental Concern	**Observed**	**Not Observed**	**Notes**
Solid Waste Dumping, Landfills or Suspected Fill Material	☒	☐	Significant landfilling present in two filled mine areas, along the eastern side (8-acre parcel) and in a central eastern area. Additional fill materials observed in piles along western property line and in other areas, including a pile of peastone (reportedly salvaged from playgrounds) north of the pond. Another notable feature is a rail spur that enters the Property near the north tip at a concrete bridge across Starkweather Creek. The spur is not in working condition and has not been used in some time. The former purpose of the spur is unknown. Some debris is present along the creek where materials removed from the creek were thrown onto the nearest land. These materials include tires, plastic, and other solid waste.
Pesticide and Herbicide Management	☐	☒	Pesticides and/or herbicide storage was not observed.
Stained Soil or Pavement, Leaking Pipes and Equipment	☐	☒	Stained soil or pavement was not observed. Leaking pipes and equipment were not observed.
Stressed Vegetation	☐	☒	Stressed vegetation was not observed. Note that snow cover was present across much of the site during our inspection.
Potable Wells or Groundwater Monitoring Wells	☒	☐	The Property has municipal water service to the ready mix plant and to the eastern home. The farm house and the milking house have sand point wells. No groundwater monitoring wells were observed.
Odors	☐	☒	Unusual or strong odors were not detected.
General Housekeeping Concerns	☐	☒	General interior housekeeping was poor. Building interiors (barn, garage, shed north of office, milking house) are in disarray and are planned for cleanup per Mr. Voit.
Other Uses or Conditions of Concern	☐	☒	No other environmental concerns were observed.

Additional detail information regarding observations made during the site inspection are included on the photo log in **Appendix F**. Following are additional summary comments.

- The Subject Property has been used most recently as residences (along Milwaukee Street), agricultural fields, a ready mix plant (operational between 1948 and 2020), and sand and gravel mining operations. In addition, portions of the Subject Property have recently been leased/bartered for use as snowplowing equipment storage and a landscaping company yard.

- Significant filling was completed in two areas of the Subject Property, filling in former sand and gravel pits. The northern fill area is on the 8-acre parcel where a pond was backfilled, and the second filled area is south of the existing pond, north of the farm field.

- Two portable petroleum ASTs are present on the Subject Property. The tanks are approximately 500-gallon capacity, are used by the snowplowing contractor, and are stored east of the ready mix office building.

- Two diesel ASTs, registered to Voit, are present on the Subject Property. One AST is located adjacent the north side of the ready mix plant and is reportedly empty. The second diesel AST is located in the area used by the snow plowing contractor but is in use by the Voit family.

- There is an approximately 80-gallon poly tank in the shop just east of the ready mix plant. Approximately 10 to 15 gallons of a liquid remain in the plastic tank. Mr. Voit identified the liquid as air entraining agent (AEA). Most products used in the ready mix plant were dry earth products (stone, sand). Other products used in the process include fiber additive, and Portland cement. Mr. Voit described the AEA as a biodegradable product. The fibers were added by small plastic bag as appropriate to the mix, and stored dry in the ready mix plant.

- A parts washer was observed along the interior northern wall of the 3450 Milwaukee Street building (ready mix plant). Historically, solvents were used in parts washers and water was often discharged to the ground. No visible staining or evidence of a release was observed during the site inspection.

- The ready mix plant and the eastern home are connected to municipal water. The ready mix plant has had service disconnected since 2020. No other buildings were connected to municipal water supply. The office did not have a water supply (or a sanitary facility). Sand point wells supply the water for the farmhouse and milk house. The farmhouse and eastern home are connected to municipal sanitary sewer, and a cistern is present at the farmhouse for stormwater.

- The residence at 3510 Milwaukee Street has one story, a basement, and attached garage. The resident, Mr. Mark Rowin, informed SCS that the basement is mostly empty, and that their furnace is original to the house and has always ran on natural gas. Mr. Rowin indicated the only petroleum products used at the residence consisted of fuel for lawn mowing, snow blowing, etc. SCS observed lot of garbage in the backyard, nothing with chemicals. In general, housekeeping was poor.

7.0 INTERVIEWS

7.1 INTERVIEWS WITH CURRENT SUBJECT PROPERTY OWNERS AND OCCUPANTS

Mr. Tony Kollasch of SCS interviewed Mr. Tom Voit, representing the Subject Property owner, on February 10, 2022. Information from the interview is included in pertinent sections of the report.

Mr. Tony Kollasch spoke with one of the residents, Mr. Mark Rowin, of the 3510 Milwaukee Street residence on February 21, 2022, during the site inspection. Information from the interview is included in pertinent sections of the report.

7.2 INTERVIEW WITH CITY OF MADISON FIRE DEPARTMENT

Ms. Jackie Rennebohm of SCS contacted the City of Madison Fire Department, on February 8, 2022, requesting any records the Department has related to hazardous materials storage, storage tanks, or incident responses related to the Subject Property. Ms. Katonia Cauley, Fire Department Clerk, indicated the Department has no records of hazmat storage or incidents. The Department provided records for seven petroleum storage tanks at 3450 Milwaukee Street Subject Property parcel. These tank records are the same records identified in **Section 4.3**.

8.0 DATA GAPS

ASTM E1527-21 section 3.2.19 defines data gaps as follows:

"data gap, n—a lack of or inability to obtain information required by this practice despite *good faith* efforts by the *environmental professional* to gather such information. *Data gaps* may result from incompleteness in any of the activities required by this practice, including, but not limited to, *site reconnaissance* (for example, an inability to conduct the *site visit*), and *interviews* (for example, an inability to interview the *key site manager*, regulatory officials, etc.)."

The ASTM standard (section 3.2.18) describes a data failure as failure to achieve the historical research objective even after reviewing the standard historical resources that are reasonably ascertainable and likely to be useful. Data failure is one type of data gap.

A data gap was identified during preparation of the Phase 1 ESA Report.

- The ASTM Standard requires that the review of standard historical sources at 5-year intervals or less. Historical topographic maps, aerial photographs, Sanborn Maps, and city directories provided for the Subject Property do not meet the historical 5-year interval standard. This is considered a data failure, and a data gap. However, the data gap is not considered significant, given the historical records review.

- In 2006, one of two ponds on the Subject Property (**Figure 2**) was backfilled. Mr. Voit said the fill material came from road construction projects in the City of Madison. Mr. Voit did not did not immediately provide any records of sources of the fill material or analytical testing, though he indicated that they possess documentation of the fill sources and may be able to provide it in time. SCS requested more details and examples of the available documentation, when possible. Mr. Voit said that he did not believe that any waste material from households, businesses, industries, or municipalities had ever been disposed on the Voit family land. Based on the findings of the 2018 Phase 2 ESA, which

identified environmental impacts related to the fill (concentrations greater than RCLs), this information may be useful but not likely to address the potential environmental concerns related to this imported fill.

The lack of records pertaining to the material used to fill the pond is considered a data gap and *a REC for the Subject Property.*

9.0 FINDINGS AND OPINIONS

During the Phase 1 ESA, items of potential environmental concern were encountered and determined not to be a REC for the Subject Property. The findings and opinions for those items are included in previous report sections.

1. Development of the Subject Property and several adjoining properties began in the early 1900s. Many of these early developments likely used coal or fuel oil before being converted to natural gas.

2. Topographic maps from the late 1800s and early 1900s show low-lying marshland on the Subject Property and adjoining properties. Fill material was brought to the northern half of the Subject Property throughout the duration of surface mining activities. Subsurface investigations on the Subject Property and several adjoining properties identified non-native fill material and analytical testing of this material identified elevated concentrations of PAHs and metals.

   The presence of non-native fill on the Subject Property is a REC.

3. The northern parcels of the Subject Property are identified as containing or in close proximity of sensitive environmental features, such as shorelands, floodplains, and or wetlands. In October 2017, raSmith conducted a Wetland Delineation of the northern half of the 56.3-acre and 8-acre parcels of the Subject Property and identified five wetlands on the Subject Property (**Figure 4**).

4. The northernmost half of the Subject Property is identified as being within an environmental corridor (**Figure 5**) limiting development. Proposed development within the environmental corridor must be approved.

5. Petroleum storage tanks were historically used on the Subject Property. In 1998 and 2004, petroleum storage tanks were closed and removed from the Subject Property. The tank removal work was performed under the oversight of an environmental professional and or registered tank remover. Soil samples collected in conjunction with the tank removals did not identify any petroleum impacts to the subsurface. Analytical results were submitted to the WDNR who determined no action required for the 1998 and 2004 tank removals.

6. Two 1,000-gallon diesel ASTs and two portable ASTs used by the snowplowing tenant, are present on the Subject Property. No spills, odors, or impacts indicating a release from these ASTs were observed.

7. The farmhouse at 3490 Milwaukee Street and the associated milk house have sand point wells. The wells are reportedly not functioning (electricity to well pumps are disconnected).

8. The northern half of the Subject Property was formerly surfaced-mined for sand and gravel (approximately 1930's to 1980's) and in 1948, the former ready mix concrete facility was built at the southwestern corner of the Subject Property. Water, cement, sand or gravel, and added

chemicals were mixed in concrete trucks on site. The ready mix facility ceased operation in 2020. The ready mix facility area of the Subject Property is currently being leased seasonally to two landscaping firms.

9. A parts washer was observed along the interior northern wall of the 3450 Milwaukee Street building (ready mix plant). Historically, solvents were used in parts washers and water was often discharged to the ground. No visible staining or evidence of a release was observed during the site inspection. Air entraining chemicals were stored and mixed in concrete on the Subject Property; according to the Subject Property owner the chemicals are biodegradable and environmentally friendly.

10. In 2006, one of two ponds on the Subject Property (**Figure 2a**) was backfilled. The material used to fill the pond reportedly came from City of Madison road projects, however records of sources of the fill material are unavailable at the publication of this report. Results of the 2018 Phase II ESA identified non-native fill material consisting of silt, clay, sand, and gravel with varying amounts of cinders, concrete, black sand, bricks, plastic, and metal within the filled pond area. Analytical samples collected within the filled area have elevated concentrations of PAHs and metal in soil and PAHs in groundwater in excess of WDNR standards.

    The elevated concentrations of metals and PAHs in excess of NR 720 RCLs and presence of non-native fill material containing cinders, slag, metal debris, and other debris on the Subject Property is an ongoing concern, and considered RECs.

11. Petroleum compounds, PAHs, and metals were identified in the subsurface on some of the adjoining properties as described in **Section 4.2**. The contaminants in the subsurface on these properties are unlikely to impact or migrate to the Subject Property due to the nature of the contaminant present, groundwater flow away from the Subject Property, and separating distance.

12. In 2017, the City of Madison installed four groundwater monitoring wells on the adjoining property to the east adjacent to the 8.0-acre parcel of the Subject Property. The wells were sampled and identified elevated concentrations of arsenic, nickel, and PCE.

    The detection of contaminants in groundwater near and upgradient from the Subject Property is a REC.

10.0 CONCLUSIONS

SCS performed a Phase 1 ESA consistent with the EPA Standards and Practices for AAI as set forth in 40 CFR, Part 312 and the ASTM Standard E1527-21 on five parcels of land owned by Voit Land LLC, E C Voit & Sons, and Voit Land LLC c/o Thomas J Voit, located at 3420-3510 Milwaukee Street, Madison, Wisconsin, hereafter referred to as the Subject Property.

The purpose of this Phase 1 ESA is to identify, to the extent practicable, RECs in connection with the Subject Property. In order to accomplish this, an historical review, and an inspection of the Subject Property were performed.

The Subject Property has a total area of approximately 65 acres and consists of the following:

Address	Description	Size	Property ID#
3420 Milwaukee St.	Vacant triangular lot	0.44 acres	0710-051-1017-8
3450 Milwaukee St.	Concrete ready mix plant, surface mine & pond, agricultural land, farmstead out-buildings & foundations	56.3 acres	0710-051-8251-0
No Address	Backfilled pond area	8.0 acres	0710-042-8860-7
3490 Milwaukee St.	Residence (former Voit farmhouse)	0.43 acres	0710-051-9860-6
3510 Milwaukee St.	Residence	0.5 acres	0710-051-9810-6

The Subject Property was part of a larger property that has been owned, managed, and occupied by the Voit family for approximately 150 years and originally operated as a family-owned, primarily dairy, farm. The farmstead is located at 3490 Milwaukee Street. The agricultural fields adjoining the farmstead are currently leased for row crops. The original farmhouse was demolished in the 1940s and a replacement farmhouse was built closer to Milwaukee Street. A residential home was built at 3510 Milwaukee in about 1955 and is currently occupied. The farmhouse is vacant.

The Voit family built a ready mix facility at the southwest corner of the Subject Property in 1948. The ready mix facility operated through 2020. The ready mix facility structures, including the office, maintenance building, and materials tower remain. Portions of the former ready mix facility area are currently leased to landscaping and snow removal companies, and used by the companies for storage and operations.

The northern half of the Subject Property was surface mined for sand and gravel starting in the 1930s. Surface mining ended approximately 50 years ago but dredging of sand and gravel on the northern half of the Subject Property continued into the early 1990s. Mining and dredging operations created two ponds, and a central mine area south of the ponds. The eastern pond was filled from approximately 2006 to 2010, and the central mine area was filled from approximately 2010 to 2015, reportedly with material from City of Madison road construction projects. Overfilling in the eastern pond area created a mound that is approximately 20 feet higher than the adjacent wetlands. Filling in the central mine area has brought that area up to a few feet higher than the adjacent agricultural fields. Contamination has been documented in some of the non-native fill soils and materials used for backfill. Soil mounds and debris are present on other areas of the Subject Property including the low areas near Starkweather Creek.

The backfilled former mining areas, the existing pond area, the wetlands, and areas adjacent Starkweather Creek are currently unused for any purpose.

This assessment has revealed no evidence of RECs in connection with the Subject Property except for the following:

4. **The presence of non-native fill soil and other fill materials on the Subject Property.** Fill soils from undocumented sources are present over much the northern portion of the Subject Property and possibly containing cinders, slag, metal, other debris, and contaminants.

5. **The presence of non-native fill soils and other fill material with elevated concentrations polycyclic aromatic hydrocarbons (PAHs) and Resource and Conservation Recovery Act (RCRA) metals in soil and groundwater on the Subject Property.** SCS completed a Phase II investigation in the northern part of the Subject Property in 2018. Soil and groundwater samples were analyzed of PAHs, metals, and volatile organic compounds (VOCs). The investigation found non-native fill

soils with cinders, slag, metal debris, and other debris on the Subject Property, and elevated concentrations of PAHs and metals in excess of Wisconsin Department of Natural Resources (WDNR) standards within the non-native fill soils.

6. **The detection of contaminants in groundwater near and upgradient from the Subject Property.** Arsenic, nickel, and tetrachloroethylene (PCE) were detected above their respective Wisconsin Administrative Code NR 140 standards in groundwater samples collected in 2017 and 2018 from monitoring wells on the adjoining property owned by the City of Madison. The monitoring wells were installed around the 8-acre Subject Property parcel, within approximately 100 feet of the Subject Property and are upgradient of the Subject Property based on groundwater elevations. The contaminated groundwater on the City-owned property to the east may have, or might migrate to the Subject Property. Vapors associated with the PCE-contaminated groundwater are also a potential concern.

Continued Viability of Environmental Site Assessment:

Consistent with ASTM Standard E1527-2021 section 4.6, this *environmental site assessment* is presumed to be viable when it is conducted within 180 days prior to the date of acquisition of the *Subject Property or* the date of the intended transaction.

Following are the dates on which the components of this environmental site assessment were conducted:

	Dates Conducted
Interviews with owners, operators, and occupants	2/10/2022
Searches for recorded environmental cleanup liens (a User responsibility)	2/21/2022
Reviews of federal, tribal, state, and local government records	1/25 -2/14/2022
Visual inspections of the Subject Property and of adjoining properties	2/10 & 21/2022
Declaration by the environmental professional responsible for the assessment	2/25/2022

11.0 DEVIATIONS

There were no significant deviations from the standards identified in EPA Standards and Practices for AAI as set forth in 40 CFR, Part 312, and/or ASTM E 1527-21.

12.0 ADDITIONAL SERVICES

No additional services were identified by the User in the preparation of this report, except for including wetlands and environmental corridor information as completed by others and provided by the User. SCS included this additional information at the request of the User.

14.0 QUALIFICATIONS AND SIGNATURES OF ENVIRONMENTAL PROFESSIONALS

SCS Engineers is a full-service civil and environmental engineering firm located in Madison, Wisconsin. Project team resumes are included in **Appendix G**.

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in 40 CFR Part 312.10.

We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Subject Property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Subject: Voit Ponds - Town of Blooming Grove

Dear Mr. Voit:

On May 13, 2005, I met with you, your attorney - Buck Sweeney, consultant - Bill Biesmann and Dane County Zoning inspector – Scott Schroekenthaler. The purpose of the meeting was to discuss how two gravel pit ponds (ponds #1 & #2 herein) on your property pertain to State statutes and/or local ordinances.

Pond #1: Pond #1 is located in the NE¼, NE¼, Section 5, T.7N, R.10E, Town of Blooming Grove (see drawing). This pond is connected to Starkweather Creek via an open channel/waterway. This pond reportedly sustains a population of stocked fish and is registered with the Wisconsin Department of Agriculture, Trade and Consumer Protection. Due to the pond connection and relationship with Starkweather Creek – you must apply for and obtain a permit to fill the pond in accordance with Chapter 30, Wisconsin Statutes prior to filling or modifying the pond or connecting waterway.

Pond #2: Pond #2 is located north and east of Pond #1 and is in the NW ¼, NW ¼, Section 4, T.7N, R.10E, Town of Blooming Grove. This pond is adjacent to Pond #1 and is separated by a strip of land that is between 30 and 40-feet wide. Pond #2 is not connected to Pond #1 or Starkweather Creek via open or closed conduit. Filling this pond is not within the Department's jurisdiction as it pertains to Chapter 30, Wisconsin Statutes. This means you may continue filling this pond so long as other State and local requirements are met. I also determined that wetland conditions do not exists within the immediate gravel banks or wet footprint of Pond #2.

Wetlands: During our meeting and tour of the property, I observed wetland conditions and drainage swales along the western and northern edge of the property. Per this letter, I am recommending that a wetland delineation be conducted in accordance with the 1987 Army Corps of Engineers Manual for Delineating Wetlands. This delineation should be conducted in order to ensure filling beyond the imprint of Pond #2 does not result in wetland filling as regulated by (but not limited to) NR 299, Wisconsin Administrative Code. Once the delineation is conducted, you may apply for a permit to fill the ditches located within wetlands for the expressed purposes of restoring wetland hydrology; thereby enhancing the wetland environment and improving

quality of the water discharging to Starkweather Creek. Such a proposal should be designed and submitted in accordance with NR 353, Wisconsin Administrative Code.

Please contact Jim Bertolacini in order to ascertain how the filling the pond and how your current concrete production operation pertains to Stormwater Discharge Permits as required in NR 216, Wisconsin Administrative Code. Mr. Bertolacini can be reached at: (608)275-3201

If you have any questions regarding this determination contact me at: (608)275-3313.

Sincerely,

Mike Halsted

January 3, 2018

INTRODUCTION

raSmith is pleased to provide this Wetland Delineation Report for the Starkweather Aluminum Treatment Facility (Study Area – 31.4 acres) located at 3450 Milwaukee Street, City of Madison, Dane County, Wisconsin (Section 5, T7N, R10E) (Figure 1). The delineation was completed at the request of City of Madison - Engineering.

The purpose of the wetland delineation was to identify the proximity and extent of wetlands within the Study Area in association with the proposed construction of a water treatment facility. On October 16 and 19, 2017, Theran Stautz, PWS, and Matt Stangel delineated five wetlands within the Study Area: a Starkweather Creek floodplain wet meadow (Wetland 2 - 6,297.4 ft^2), two Starkweather Creek slough floodplain wet meadows (Wetland 1– 6,264.3 ft^2 and Wetland 3 - 22,949.8 ft^2), an excavated wet meadow pothole and connected ditch (Wetland 4 – 23,103.7 ft^2) and an excavated sedge meadow pothole and connected drainage swale (Wetland 5 - 1,422.8 ft^2). Four waterways/waterbodies were also identified during the wetland delineation: Starkweather Creek, a slough of Starkweather Creek, an excavated quarry pond and a channel connecting the quarry pond to Starkweather Creek. The delineation is presented here in terms of qualifications, methodology, results, and conclusions.

STATEMENT OF QUALIFICATIONS

raSmith provides wetland and ecological services including wetland delineation, assessment, permitting, and restoration. raSmith ecologists offer a wide variety of technical experience in the natural resource field and have successfully completed projects throughout the Midwestern and Northeastern United States.

Mr. Stautz was the technical lead and author on this delineation project. Theran has a B.S. degree in Natural Resources from the University of Wisconsin – Madison and over 15 years of ecological experience, including wetland delineation, monitoring, native habitat restoration and forestry. He is a Professional Wetland Scientist (PWS) with the Society of Wetland Scientists and a Wisconsin Department of Natural Resources (WDNR) Assured Wetland Delineator.

Mr. Stangel holds a B.A. degree in Geography as well as an M.S. in Freshwater Science and Technology from the University of Wisconsin – Milwaukee. He has over 5 years of professional experience in environmental science including ecological restoration, natural area management, and environmental sampling and analysis.

WETLAND DELINEATION METHODOLOGY

The wetland delineation consisted of a review of available maps and information followed by site visits on October 16 and 19, 2017, to document field conditions. The presence and absence of hydrophytic vegetation, wetland hydrology and hydric soil indicators were documented using methodology defined in the *US Army Corps of Engineers* (USACE) *1987 Wetland Delineation Manual, Regional Supplement to the 1987 Corps of Engineers Wetland Delineation Manual: Northcentral and Northeast Regions* (USACE ERDC, 2012) and *Guidance for Submittal of Delineation Reports to the St. Paul District Army Corps of Engineers and the Wisconsin Department of Natural Resources* (USACE St. Paul District, 2015). See References section for a complete list of guidance and sources utilized.

VEGETATION

At the sampling points, herbaceous, shrub/sapling, tree and vine strata were measured using 5-foot, 15-foot, and 30-foot radius plots, respectively. Percent cover was visually estimated within the plots, and dominant species were determined by applying the 50/20 Rule and/or Prevalence Index. *The National Wetland Plant List: 2016 wetland ratings* (Lichvar, et al., 2016) was used to determine the wetland indicator status of observed vegetation.

HYDROLOGY

The nearest available Natural Resource Conservation Service (NRCS) WETS Table and the National Oceanic and Atmospheric Administration (NOAA) National Weather Service (NWS) Advanced Hydrologic Prediction Service (AHPS) 90-day Percent of Normal Precipitation Map were analyzed to determine the antecedent hydrologic condition of the Study Area. Inundation, water table, and/or saturation were measured at the sampling points, if present. Soil pits were generally left open for at least one hour prior to measurement to allow for the normalization of the water level. Primary and secondary indicators of wetland hydrology were investigated and if present were noted on the data sheets.

SOILS

At the sampling points, a soil pit was excavated to a depth of at least 20-24 inches, where possible. The color and texture of the soil matrix and associated mottling was recorded for each observed soil layer within the pit. The Munsell Soil Color Book was used to determine the color of observed moist soils. The soil was analyzed for hydric soil characteristics and, if met, hydric soil(s) was/were indicated on the data sheets.

SOURCES REVIEWED

The United States Geological Survey (USGS) Topographic Map (National Geographic Society, 2017); the Wisconsin Department of Natural Resources (WDNR) Surface Water Data Viewer (SWDV) (2017); National Wetland Inventory (NWI) (2017); 1995, 2005, 2010 and 2017 Dane County aerial photos; and the NRCS Web Soil Survey (2017) were reviewed prior to the wetland delineation in order to gain familiarity with the site's topography, wetland history, soils and past land uses.

SITE PHOTOS

Photos taken of the plant communities, including uplands and wetlands, are located in Appendix 4.

RESULTS

EXISTING ENVIRONMENTAL MAPPING

The USGS topographic map indicates the Study Area is generally rolling, adjacent to Starkweather Creek and contains two large ponds (Figure 1). Contours shown on Figure 4d indicate that elevations range from approximately 846 feet to 868 feet. The wetlands, waterways and quarry pond are located at or below the 848 foot contour.

The NWI indicates the presence of five freshwater emergent wetlands (PEM1C/F), one freshwater pond (PUBHx) and two riverine wetlands (R2UBH/x) within the Study Area (Figure 3). The WDNR SWDV indicates two unnamed ponds, Starkweather Creek and the presence of three wetland indicator soils mapped within the Study Area: Adrian muck (hydric), Colwood silt loam (hydric) and Houghton muck (hydric). The NRCS Web Soil Survey indicated the presence of six soil types, gravel pit and water within the Study Area. A detailed list of the soils and components is located in Appendix 2.

Aerial photographs from 1995-2017 (Figures 2, 3 and 4a-d) were studied to determine changes to the site over time. The Study Area is located within an existing and active gravel pit/concrete plant operation on the east side of Madison. The storm water features containing Wetlands 1-3 were constructed between 1976 and 1987. The remaining Study Area has remained unchanged during this period of time.

ANTECEDENT HYDROLOGIC CONDITION

Based on the WETS Analysis Worksheet in Appendix 3, precipitation was normal for the months of July-September, 2017. The NWS AHPS Precipitation Map (Figure 5) indicates the Study Area was within 75-90% of

normal precipitation in the 90 days before the site visit, which is considered normal. According to the Daily Precipitation Table in Appendix 3, in the two weeks prior to conducting field work, 2.23 inches of precipitation was recorded.

FIELD INVESTIGATION

All areas containing wetland indicators on the maps and analysis mentioned above were evaluated in the field on October 16 and 19. To the best of our knowledge, there was no prior agency consultation or wetland delineation for this Study Area. A total of eighteen sampling points were examined and five wetlands were delineated within the Study Area: a Starkweather Creek floodplain wet meadow (Wetland 2 – 6,297.4 ft^2), two Starkweather Creek slough floodplain wet meadows (Wetland 1 – 6,264.3 ft^2 and Wetland 3 – 22,949.8 ft^2), an excavated wet meadow pothole and connected ditch (Wetland 4 – 23,103.7 ft^2) and an excavated sedge meadow pothole and connected drainage swale (Wetland 5 – 1,422.8 ft^2). Four waterways/waterbodies were also identified during the wetland delineation: Starkweather Creek, a slough of Starkweather Creek, an excavated quarry pond and a channel connecting the quarry pond to Starkweather Creek. A Trimble Geo7X GPS unit with sub-meter accuracy was used to locate the wetland boundary and sampling points. Cursory sampling points in both upland and wetland areas were sampled in the field to determine the wetland boundaries. Data sheets were compiled and are included in Appendix 5.

Wetland 1 and Wetland 3 – Starkweather Creek Slough Floodplain Wetland

The delineated wetlands include 29,214.1 ft^2 of wet meadow, located in the floodplain of sloughs and side channels of Starkweather Creek. Two sampling point (Points 3 and 9) were examined within the wetlands. The wetlands are mapped as freshwater emergent wetland (PEM1C/F) by the NWI. Wetland 1 was delineated off-site by NES Ecological Services in 2014 (dashed wetland line to the east of the Study Area, Figure 2).

Hydrophytic vegetation was present within the wetlands and was dominated by reed canary grass (*Phalaris arundinacea*) and hybrid cattail (*Typha x glauca*).

The delineated wetlands occur within natural basins and terraces adjacent to or associated with slough and side channels of Starkweather Creek. The wetlands are sustained by water levels within the sloughs and side channels and serve as flood storage during heavy precipitation events when the waterways overtop. One primary (Saturation) and three secondary indicators of wetland hydrology (Dry Season Water Table, Geomorphic Position and FAC-Neutral Test) were observed in the wetland.

The wetlands occur in mapped Colwood silt loam (hydric), Houghton muck (hydric) and gravel pit (predominantly non-hydric). Soils within the wetlands matched the Histosol, Depleted Below Dark Surface and Depleted Matrix hydric soil indicators.

Three sampling points were established in the adjacent upland (Points 2, 10 and 15). The uplands were dominated by a mix of hydrophytic and non-hydrophytic vegetation including Kentucky bluegrass (*Poa pratensis*), birds foot trefoil (*Lotus corniculatus*), Canada goldenrod (*Solidago canadensis*), reed canary grass, English plantain (*Plantago lanceolata*), sandbar willow (*Salix interior*), eastern cottonwood (*Populus deltoides*) and Siberian elm (*Ulmus pumila*). Soil at Sampling Point 10 met the Redox Dark Surface hydric soil indicator but lacked wetland hydrology indicators and was dominated by upland vegetation. No wetland hydrology or hydric soil indicators were present at Sampling Points 2 and 15. The soil profiles exhibit historic fill due to disturbance from historic and active gravel pit operations. There was a slight (1-2 foot) elevation change along the wetland boundary. The wetland boundary was established using professional judgment and observed changes in wetland hydrology, vegetation, soil and topography.

Please refer to site photos in Appendix 4 for views of the wetlands and the adjacent uplands.

Wetland 2 – Starkweather Creek Floodplain Wet Meadow

The delineated wetland is a 6,297.4 ft² wet meadow, located on a terrace adjacent to Starkweather Creek. One sampling point (Point 8) was examined within the wetland. The wetland is mapped as freshwater emergent wetland (PEM1C) by the NWI.

Hydrophytic vegetation was present within the wetland and was dominated by reed canary grass.

The delineated wetland occurs within a narrow terrace within the floodplain of Starkweather Creek. The wetland is sustained by water levels within Starkweather Creek and serves as flood storage during heavy precipitation events when the waterway overtops. Two primary (High Water Table and Saturation) and two secondary indicators of wetland hydrology (Geomorphic Position and FAC-Neutral Test) were observed in the wetland.

The wetland occurs in mapped Colwood silt loam (hydric). Soil within the wetland matched the Histosol hydric soil indicator.

One sampling point was established in the adjacent upland (Point 5). The upland was dominated by non-hydrophytic vegetation including white snakeroot (*Ageratina altissima*), barnyard grass (*Echinochloa crus-galli*), great mullein (*Verbascum thapsus*), Canada goldenrod, fall panic grass (*Panicum dichotomiflorum*), box elder (*Acer negundo*) and Siberian elm. No wetland hydrology or hydric soil indicators were present at the sampling point. The soil profile is likely historic fill. There was a slight (<1-1 foot) elevation change along the wetland boundary. The wetland boundary was established using professional judgment and observed changes in wetland hydrology, vegetation, soil and topography.

Please refer to site photos in Appendix 4 for views of the wetland and the adjacent uplands.

Wetland 4 – Excavated Wet Meadow Pothole and Connected Ditch

The delineated wetland is a 23,103.7 ft² excavated wet meadow pothole which is connected to a narrow ditch that flows to the quarry pond channel. One sampling point (Point 12) was examined within the wetland. The wetland is mapped as freshwater emergent wetland (PEM1C) by the NWI.

Hydrophytic vegetation was present within the wetland and was dominated by common reed (*Phragmites australis*) and reed canary grass.

The delineated wetland occurs within an excavated pothole. Precipitation and some surface water runoff collects in the pothole until it reaches the level of the connected drainage ditch. The wetland drains through the ditch to the quarry pond channel and ultimately Starkweather Creek. The wetland was excavated deep enough to be seasonally influenced by groundwater. One primary (Saturation) and three secondary indicators of wetland hydrology (Dry Season Water Table, Geomorphic Position and FAC-Neutral Test) were observed in the wetland.

The wetland occurs in Colwood silt loam (hydric). Soil within the wetland matched the Depleted Matrix hydric soil indicator. Topsoil was likely removed as part of the excavation.

Two sampling points were established in the adjacent upland (Points 11 and 13). The upland was dominated by a mix of hydrophytic and non-hydrophytic vegetation including white sweet clover (Melilotus alba), meadow willow (Salix petiolaris), American elm (Ulmus Americana), field horsetail (Equisetum arvense), reed canary grass, Canada goldenrod and sandbar willow. Sampling Point 11 is located on a sand stockpile. No wetland hydrology or hydric soil indicators were present at the sampling points. There was a slight to significant (<1-3 foot) elevation change along the wetland boundary. The wetland boundary was established using professional judgment and observed changes in wetland hydrology, vegetation, soil and topography.

Please refer to site photos in Appendix 4 for views of the wetland and the adjacent uplands.

Wetland 5 – Excavated Sedge Meadow Pothole and Connected Drainage Swale

The delineated wetland is a 1,422.8 ft² excavated sedge meadow pothole which is connected to a dranage swale that flows into the quarry pond channel. One sampling point (Point 17) was examined within the wetland. The wetland is not mapped by the NWI.

Hydrophytic vegetation was present within the wetland and was dominated by common spikerush (*Eleocharis palustris*) and barnyard grass.

The delineated wetland occurs within a small excavated pothole. Precipitation and some surface water runoff collects in the pothole until it reaches the level of the connected drainage swale. The wetland drains through the swale to the quarry pond channel and ultimately Starkweather Creek. The wetland is located in an area of current activity which may have resulted in some soil compaction, as the pothole contains more surface water than the surrounding wetlands. Four primary (Surface Water, High Water Table, Saturation and Sparsely Vegetated Concave Surface) and two secondary indicators of wetland hydrology (Geomorphic Position and FAC-Neutral Test) were observed in the wetland.

The wetland occurs in gravel pit (predominantly non-hydric). Soil within the wetland matched the Depleted Matrix hydric soil indicator. Fill due to surface erosion or gravel pit operations is located within the upper portion of the soil profile.

One sampling point was established in the adjacent upland (Point 18). The upland was dominated by non-hydrophytic vegetation including Canada goldenrod. No wetland hydrology or hydric soil indicators were present at the sampling points. There was a slight to significant (<1-2 foot) elevation change along the wetland boundary. The wetland boundary was established using professional judgment and observed changes in wetland hydrology, vegetation, soil and topography.

Please refer to site photos in Appendix 4 for views of the wetland and the adjacent uplands.

Quarry Pond and Waterways

Sampling Points 1, 4, 6 and 14 were established in Starkweather Creek, a slough of Starkweather Creek and the quarry pond channel. The quarry pond itself was not sampled. Data sheets for these areas can be found in Appendix 5.

CONCLUSION

Based on the wetland delineation completed by raSmith, five wetlands were delineated within the Study Area: a Starkweather Creek floodplain wet meadow (Wetland 2 – 6,297.4 ft²), two Starkweather Creek slough floodplain wet meadows (Wetland 1 – 6,264.3 ft² and Wetland 3 – 22,949.8 ft²), an excavated wet meadow pothole and connected ditch (Wetland 4 – 23,103.7 ft²) and an excavated sedge meadow pothole and connected drainage swale (Wetland 5 – 1,422.8 ft²). Four waterways/waterbodies were also identified during the wetland delineation: Starkweather Creek, a slough of Starkweather Creek, an excavated quarry pond and a channel connecting the quarry pond to Starkweather Creek.

raSmith ecologists are required by the WDNR to provide their professional judgment on wetland susceptibility per revised NR 151 guidance (Guidance #3800-2015-02) (Appendix 6). It is our opinion that the susceptibility is *low* for Wetlands 1-4 and *moderate* for Wetland 5.

Theran Stautz, lead delineator, is an Assured Delineator as explained on the WDNR web site, http://dnr.wi.gov/topic/wetlands/assurance.html. The WDNR considers Mr. Stautz's wetland determination/delineation work to be "Assured" for purposes of Wisconsin waterway and wetland permits, such that Mr. Stautz's clients do not need to wait for concurrence letters from the WDNR before relying on such determinations and delineations and may expect that wetland issues should not be the cause of delays in state waterway and wetland permit decisions. Per communication with USACE staff, concurrence from the United States Army Corps of Engineers is not necessary unless the project is associated with a wetland fill permit application.

The wetland boundary staked in the field by raSmith is a professional finding based on accepted USACE and WDNR methodology at the time the wetlands were delineated. This wetland delineation field work and the report are not intended to meet the requirements of a WDNR Endangered Species Review, a navigability determination, or the location of either the Ordinary High Water Mark or floodplain.

Wetlands and waterways that are considered waters of the U.S. are subject to regulation under Section 404 of the Clean Water Act (CWA) and the jurisdictional regulatory authority lie with the USACE. Additionally, the WDNR has regulatory authority over wetlands, navigable waters, and adjacent lands under Chapters 30 and 281 Wisconsin State Statutes, and Wisconsin Administrative Codes NR 103, 299, 350, and 353. In addition, the USACE and WDNR have jurisdictional authority to determine which features are exempt including stormwater ponds and conveyance features. If the client proposes to modify an existing stormwater feature, an Artificial Determination Exemption would need to be submitted. See the form on the WDNR Wetland Identification website (fee involved), http://dnr.wi.gov/topic/wetlands/identification.html. Furthermore, municipalities, townships, and counties may have local zoning authority over certain areas or types of wetland and waterways. The determination that a wetland or waterway is subject to regulatory jurisdiction is made independently by the agencies.

Any activity in the delineated wetland may require U.S. Army Corps of Engineers permits and State of Wisconsin Department of Natural Resources Water Quality Certification and local government permits. If the Client proceeds to change, modify or utilize the property in question without obtaining authorization from the appropriate regulatory agency, it will be done at the Client's risk and raSmith shall not be responsible or liable for any resulting damages.

Appendix 4:

Site Photographs

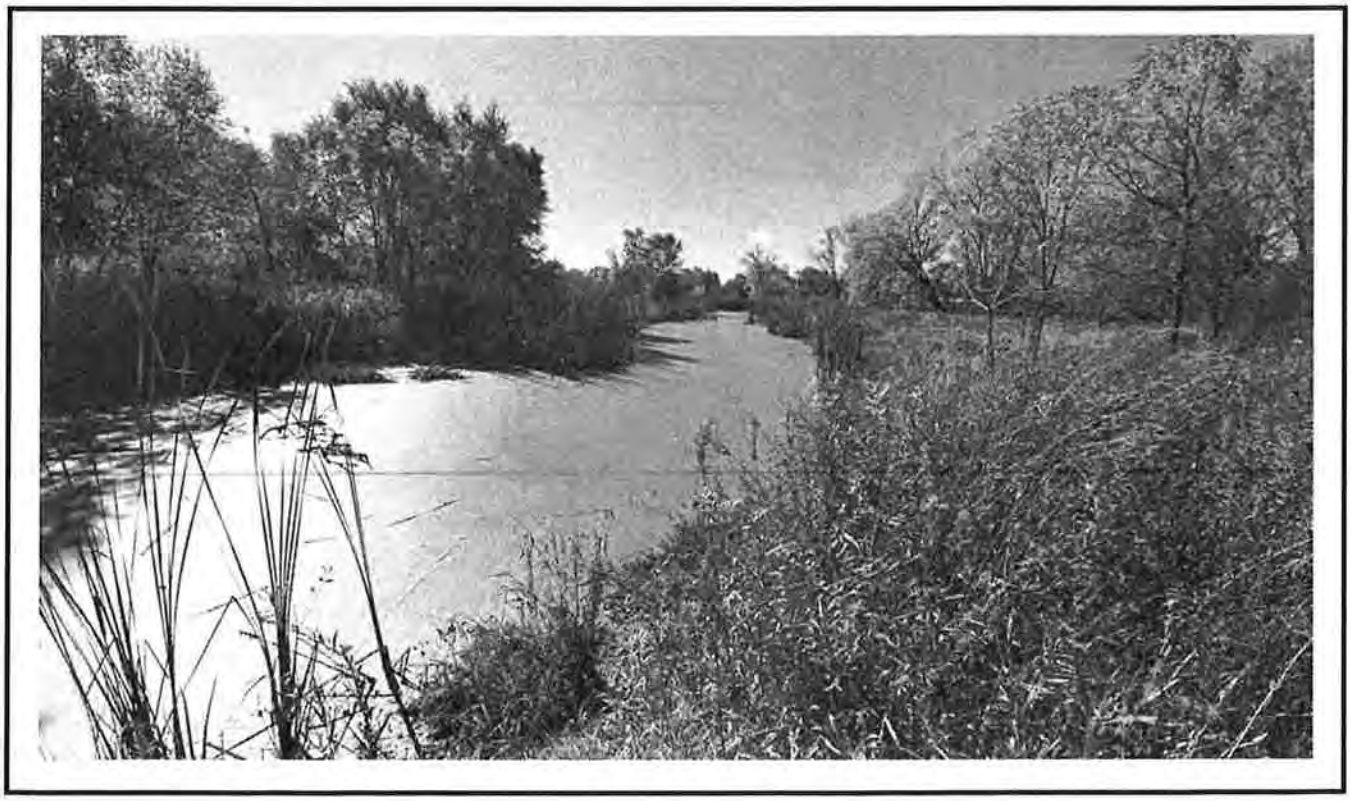
Photograph 1 (10/16/17): Starkweather Creek, looking southwest toward Sampling Point 1.

Photograph 2 (10/16/17): Wetland 1, looking north toward Sampling Point 3.

Photograph 3 (10/16/17): Starkweather Creek slough, looking west from eastern Study Area boundary.

Photograph 4 (10/16/17): Starkweather Creek, looking southwest toward Sampling Point 4.

Photograph 5 (10/16/17): Starkweather Creek slough, looking east toward Sampling Point 6.



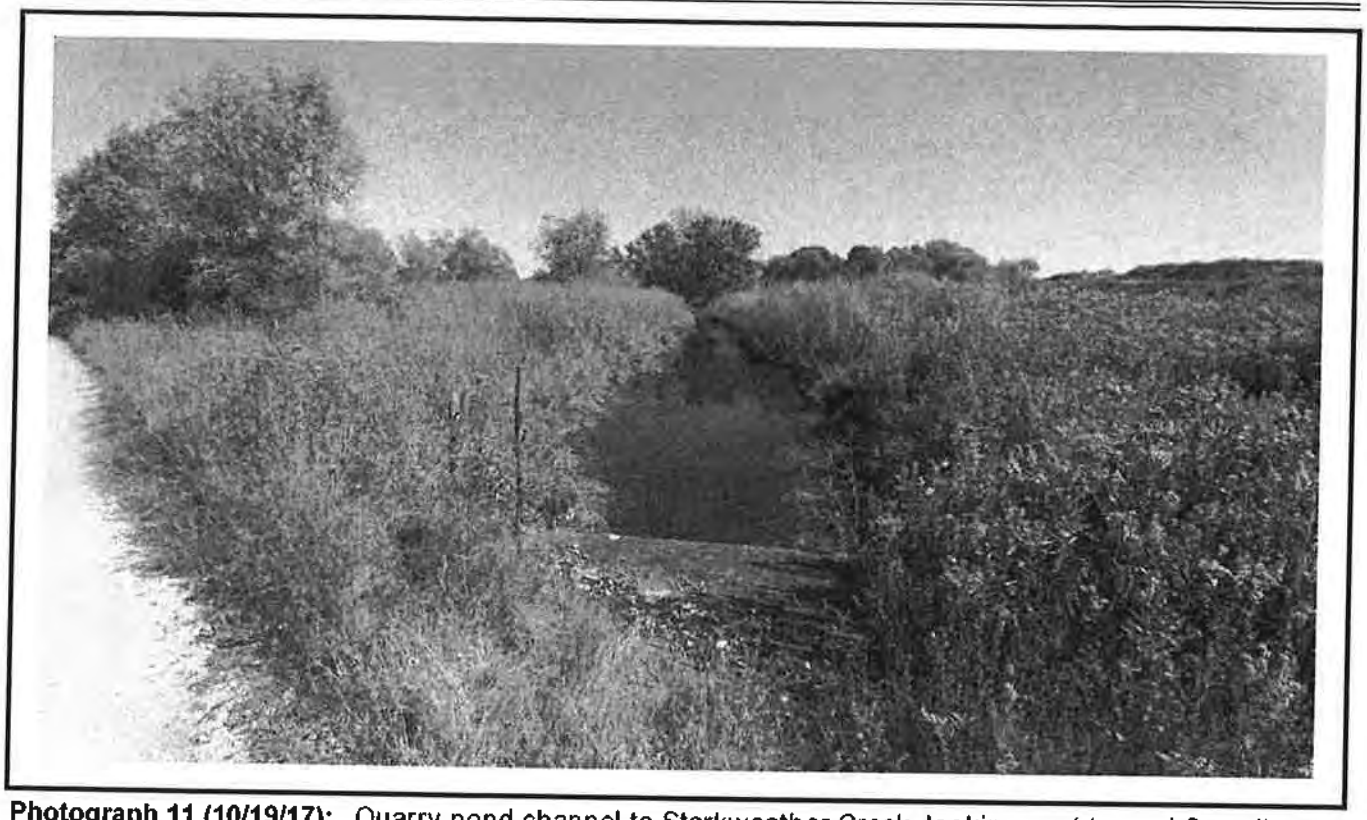
Photograph 6 (10/16/17): Starkweather Creek slough, looking southwest from Sampling Point 6.

Photograph 7 (10/16/17): Starkweather Creek floodplain (Wetland 2), looking south toward Sampling Point 8.

Photograph 8 (10/16/17): Starkweather Creek slough floodplain (Wetland 3), looking northwest toward Sampling Point 9.

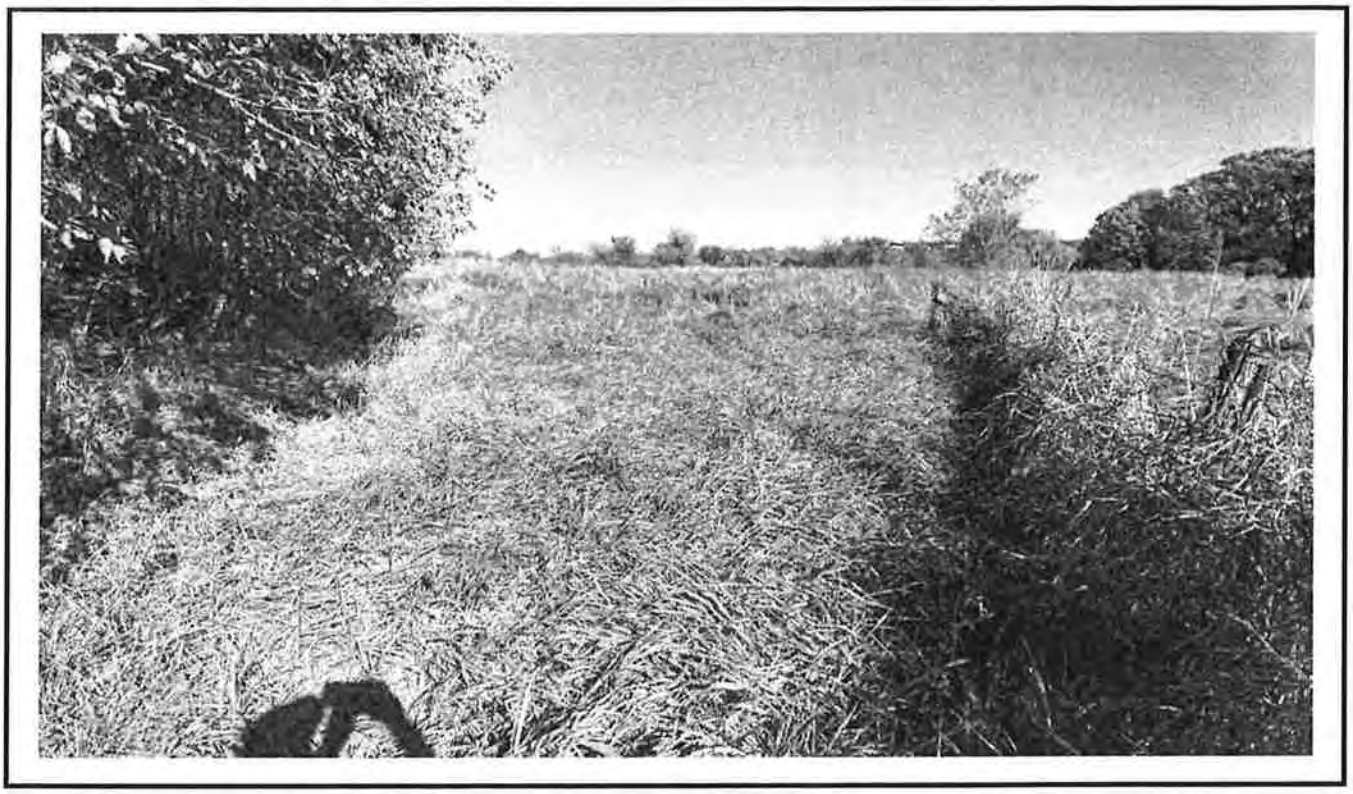
Photograph 9 (10/19/17): Soil piles, looking north from Sampling Point 11.

Photograph 10 (10/19/17): Wetland 4, looking south toward Sampling Point 12.



Photograph 11 (10/19/17): Quarry pond channel to Starkweather Creek, looking east toward Sampling Point 14.

Photograph 12 (10/19/17): Wetland 5, looking west toward Sampling Point 17. Wetland 4 drains across the access road to another depression during high water events. This area is included in the square footage of Wetland 4 but is not pictured.



Photograph 13 (10/19/17): Wetland 1 (portion in corner of Study Area , southeast of quarry pond), looking east. This portion of Wetland 1 was delineated by NES Ecological Services in 2014.

Photograph 14 (10/19/17): Quarry pond, looking north.

Appendix 5:

Wetland Determination Data Forms – Northcentral/Northeast Regions

WETLAND DETERMINATION DATA FORM - Northcentral and Northeast Region

Project/Site: Starkweather Aluminum Treatment Facility **City/County:** Madison / Dane **Sampling Date:** 16-Oct-17

Applicant/Owner: City of Madison - Engineering **State:** WI **Sampling Point:** 01

Investigator(s): Stautz, Stangel **Section, Township, Range:** S. 5 T. 7N R. 10E

Landform (hillslope, terrace, etc.): Channel (active) **Local relief (concave, convex, none):** concave **Slope:** 0.0 % / 0.0 °

Subregion (LRR or MLRA): LRR K **Lat.:** **Long.:** **Datum:**

Soil Map Unit Name: Houghton muck **NWI classification:** None

Are climatic/hydrologic conditions on the site typical for this time of year? Yes ◉ No ○ **(If no, explain in Remarks.)**

Are Vegetation ☐ **, Soil** ☐ **, or Hydrology** ☐ **significantly disturbed?** **Are "Normal Circumstances" present?** Yes ◉ No ○

Are Vegetation ☑ **, Soil** ☑ **, or Hydrology** ☐ **naturally problematic?** **(If needed, explain any answers in Remarks.)**

Summary of Findings - Attach site map showing sampling point locations, transects, important features, etc

Hydrophytic Vegetation Present?	Yes ◉	No ○	
Hydric Soil Present?	Yes ◉	No ○	**Is the Sampled Area within a Wetland?** Yes ◉ No ○
Wetland Hydrology Present?	Yes ◉	No ○	

Remarks: (Explain alternative procedures here or in a separate report.)

The sampling point is located within the active stream channel of Starkweather Creek.

Hydrology

Wetland Hydrology Indicators:

Primary Indicators (minimum of one required; check all that apply)

- ☑ Surface Water (A1)
- ☑ High Water Table (A2)
- ☑ Saturation (A3)
- ☐ Water Marks (B1)
- ☐ Sediment Deposits (B2)
- ☐ Drift deposits (B3)
- ☐ Algal Mat or Crust (B4)
- ☐ Iron Deposits (B5)
- ☑ Inundation Visible on Aerial Imagery (B7)
- ☐ Sparsely Vegetated Concave Surface (B8)
- ☐ Water-Stained Leaves (B9)
- ☐ Aquatic Fauna (B13)
- ☐ Marl Deposits (B15)
- ☐ Hydrogen Sulfide Odor (C1)
- ☐ Oxidized Rhizospheres along Living Roots (C3)
- ☐ Presence of Reduced Iron (C4)
- ☐ Recent Iron Reduction in Tilled Soils (C6)
- ☐ Thin Muck Surface (C7)
- ☐ Other (Explain in Remarks)

Secondary Indicators (minimum of 2 required)

- ☐ Surface Soil Cracks (B6)
- ☐ Drainage Patterns (B10)
- ☐ Moss Trim Lines (B16)
- ☐ Dry Season Water Table (C2)
- ☐ Crayfish Burrows (C8)
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☐ Stunted or Stressed Plants (D1)
- ☑ Geomorphic Position (D2)
- ☐ Shallow Aquitard (D3)
- ☐ Microtopographic Relief (D4)
- ☐ FAC-neutral Test (D5)

Field Observations:

Surface Water Present?	Yes ◉	No ○	Depth (inches): 16	
Water Table Present?	Yes ◉	No ○	Depth (inches): 0	
Saturation Present? (includes capillary fringe)	Yes ◉	No ○	Depth (inches): 0	**Wetland Hydrology Present?** Yes ◉ No ○

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

NRCS WETS Table (Madison Dane Rgnl Ap, WI); NOAA AHHPS 90 Day % Normal Precip Map; 1995, 2005, 2010 and 2017 aerial photos

UPL species	0	x 5 =	0
Column Totals:	0 (A)		0 (B)

Prevalence Index = B/A = 5.000

Hydrophytic Vegetation Indicators:

- ☐ **Rapid Test for Hydrophytic Vegetation**
- ☐ **Dominance Test is > 50%**
- ☐ **Prevalence Index is ≤3.0** [1]
- ☐ **Morphological Adaptations** [1] **(Provide supporting data in Remarks or on a separate sheet)**
- ☑ **Problematic Hydrophytic Vegetation** [1] **(Explain)**

[1] **Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.**

Definitions of Vegetation Strata:

Tree - Woody plants, 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.

Sapling/shrub - Woody plants less than 3 in. DBH and greater than 3.28 ft (1m) tall..

Herb - All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft tall.

Woody vine - All woody vines greater than 3.28 ft in height.

Hydrophytic Vegetation Present? Yes ◉ No ○

Remarks: (Include photo numbers here or on a separate sheet.)

Vegetation was not present at the sampling point due to the depth of surface water.

*Indicator suffix = National status or professional decision assigned because Regional status not defined by FWS.

Soil

Sampling Point: 01

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth (inches)	Matrix Color (moist)	%	Redox Features Color (moist)	%	Type [1]	Loc[2]	Texture	Remarks

[1] Type: C=Concentration. D=Depletion. RM=Reduced Matrix, CS=Covered or Coated Sand Grains [2]Location: PL=Pore Lining. M=Matrix

Hydric Soil Indicators:

- ☐ Histosol (A1)
- ☐ Histic Epipedon (A2)
- ☐ Black Histic (A3)
- ☐ Hydrogen Sulfide (A4)
- ☐ Stratified Layers (A5)
- ☐ Depleted Below Dark Surface (A11)
- ☐ Thick Dark Surface (A12)
- ☐ Sandy Muck Mineral (S1)
- ☐ Sandy Gleyed Matrix (S4)
- ☐ Sandy Redox (S5)
- ☐ Stripped Matrix (S6)
- ☐ Dark Surface (S7) (LRR R, MLRA 149B)
- ☐ Polyvalue Below Surface (S8) (LRR R, MLRA 149B)
- ☐ Thin Dark Surface (S9) (LRR R, MLRA 149B)
- ☐ Loamy Mucky Mineral (F1) LRR K, L)
- ☐ Loamy Gleyed Matrix (F2)
- ☐ Depleted Matrix (F3)
- ☐ Redox Dark Surface (F6)
- ☐ Depleted Dark Surface (F7)
- ☐ Redox Depressions (F8)

Indicators for Problematic Hydric Soils : [3]

- ☐ 2 cm Muck (A10) (LRR K, L, MLRA 149B)
- ☐ Coast Prairie Redox (A16) (LRR K, L, R)
- ☐ 5 cm Mucky Peat or Peat (S3) (LRR K, L, R)
- ☐ Dark Surface (S7) (LRR K, L, M)
- ☐ Polyvalue Below Surface (S8) (LRR K, L)
- ☐ Thin Dark Surface (S9) (LRR K, L)
- ☐ Iron-Manganese Masses (F12) (LRR K, L, R)
- ☐ Piedmont Floodplain Soils (F19) (MLRA 149B)
- ☐ Mesic Spodic (TA6) (MLRA 144A, 145, 149B)
- ☐ Red Parent Material (F21)
- ☐ Very Shallow Dark Surface (TF12)
- ☑ Other (Explain in Remarks)

[3]Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if observed):

Type: None

Depth (inches): NA

Hydric Soil Present? Yes ◉ No ○

Remarks:

Soil at the sampling point was not examined due to water depth. Soil was assumed to be hydric due to permanent inundation. Stream substratum was composed of mud and gravel.

WETLAND DETERMINATION DATA FORM - Northcentral and Northeast Region

Project/Site: Starkweather Aluminum Treatment Facility **City/County:** Madison / Dane **Sampling Date:** 16-Oct-17

Applicant/Owner: City of Madison - Engineering **State:** WI **Sampling Point:** 02

Hydric Soil Present?	Yes ◉ No ○		
Wetland Hydrology Present?	Yes ◉ No ○		

Remarks: (Explain alternative procedures here or in a separate report.)

The sampling point is located within the active stream channel of Starkweather Creek.

Hydrology

Wetland Hydrology Indicators:

Primary Indicators (minimum of one required; check all that apply)

- ☑ Surface Water (A1)
- ☑ High Water Table (A2)
- ☑ Saturation (A3)
- ☐ Water Marks (B1)
- ☐ Sediment Deposits (B2)
- ☐ Drift deposits (B3)
- ☐ Algal Mat or Crust (B4)
- ☐ Iron Deposits (B5)
- ☑ Inundation Visible on Aerial Imagery (B7)
- ☐ Sparsely Vegetated Concave Surface (B8)
- ☐ Water-Stained Leaves (B9)
- ☐ Aquatic Fauna (B13)
- ☐ Marl Deposits (B15)
- ☐ Hydrogen Sulfide Odor (C1)
- ☐ Oxidized Rhizospheres along Living Roots (C3)
- ☐ Presence of Reduced Iron (C4)
- ☐ Recent Iron Reduction in Tilled Soils (C6)
- ☐ Thin Muck Surface (C7)
- ☐ Other (Explain in Remarks)

Secondary Indicators (minimum of 2 required)

- ☐ Surface Soil Cracks (B6)
- ☐ Drainage Patterns (B10)
- ☐ Moss Trim Lines (B16)
- ☐ Dry Season Water Table (C2)
- ☐ Crayfish Burrows (C8)
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☐ Stunted or Stressed Plants (D1)
- ☑ Geomorphic Position (D2)
- ☐ Shallow Aquitard (D3)
- ☐ Microtopographic Relief (D4)
- ☑ FAC-neutral Test (D5)

Field Observations:

Surface Water Present?	Yes ◉ No ○	Depth (inches):	12	
Water Table Present?	Yes ◉ No ○	Depth (inches):	0	
Saturation Present? (includes capillary fringe)	Yes ◉ No ○	Depth (inches):	0	**Wetland Hydrology Present?** Yes ◉ No ○

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

NRCS WETS Table (Madison Dane Rgnl Ap, WI); NOAA AHHPS 90 Day % Normal Precip Map; 1995, 2005, 2010 and 2017 aerial photos

Prevalence Index = B/A = 1.000

Hydrophytic Vegetation Indicators:

- ☑ **Rapid Test for Hydrophytic Vegetation**
- ☑ **Dominance Test is > 50%**
- ☑ **Prevalence Index is ≤3.0** [1]
- ☐ **Morphological Adaptations** [1] **(Provide supporting data in Remarks or on a separate sheet)**
- ☐ **Problematic Hydrophytic Vegetation** [1] **(Explain)**

[1] **Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.**

Definitions of Vegetation Strata:

Tree - Woody plants, 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.

Sapling/shrub - Woody plants less than 3 in. DBH and greater than 3.28 ft (1m) tall..

Herb - All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft tall.

Woody vine - All woody vines greater than 3.28 ft in height.

Hydrophytic Vegetation Present? Yes ◉ No ○

Remarks: (Include photo numbers here or on a separate sheet.)

Phalaris arundinacea and Salix interior are also present along the stream banks.

*Indicator suffix = National status or professional decision assigned because Regional status not defined by FWS.

Soil

Sampling Point: 04

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth (inches)	Matrix Color (moist)	%	Redox Features Color (moist)	%	Type [1]	Loc[2]	Texture	Remarks

[1] Type: C=Concentration. D=Depletion. RM=Reduced Matrix, CS=Covered or Coated Sand Grains [2]Location: PL=Pore Lining. M=Matrix

Hydric Soil Indicators:

- ☐ Histosol (A1)
- ☐ Histic Epipedon (A2)
- ☐ Black Histic (A3)
- ☐ Hydrogen Sulfide (A4)
- ☐ Stratified Layers (A5)
- ☐ Depleted Below Dark Surface (A11)
- ☐ Thick Dark Surface (A12)
- ☐ Sandy Muck Mineral (S1)
- ☐ Sandy Gleyed Matrix (S4)
- ☐ Sandy Redox (S5)
- ☐ Stripped Matrix (S6)
- ☐ Dark Surface (S7) (LRR R, MLRA 149B)
- ☐ Polyvalue Below Surface (S8) (LRR R, MLRA 149B)
- ☐ Thin Dark Surface (S9) (LRR R, MLRA 149B)
- ☐ Loamy Mucky Mineral (F1) LRR K, L)
- ☐ Loamy Gleyed Matrix (F2)
- ☐ Depleted Matrix (F3)
- ☐ Redox Dark Surface (F6)
- ☐ Depleted Dark Surface (F7)
- ☐ Redox Depressions (F8)

Indicators for Problematic Hydric Soils : [3]

- ☐ 2 cm Muck (A10) (LRR K, L, MLRA 149B)
- ☐ Coast Prairie Redox (A16) (LRR K, L, R)
- ☐ 5 cm Mucky Peat or Peat (S3) (LRR K, L, R)
- ☐ Dark Surface (S7) (LRR K, L, M)
- ☐ Polyvalue Below Surface (S8) (LRR K, L)
- ☐ Thin Dark Surface (S9) (LRR K, L)
- ☐ Iron-Manganese Masses (F12) (LRR K, L, R)
- ☐ Piedmont Floodplain Soils (F19) (MLRA 149B)
- ☐ Mesic Spodic (TA6) (MLRA 144A, 145, 149B)
- ☐ Red Parent Material (F21)
- ☐ Very Shallow Dark Surface (TF12)
- ☑ Other (Explain in Remarks)

[3]Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if observed):

Type: None

Depth (inches): NA

Hydric Soil Present? Yes ◉ No ○

Remarks:

Soil at the sample point was not examined due to water depth. Soil was assumed to be hydric due to permanent inundation. Stream substratum was soft and muddy.

WETLAND DETERMINATION DATA FORM - Northcentral and Northeast Region

Project/Site: Starkweather Aluminum Treatment Facility **City/County:** Madison / Dane **Sampling Date:** 16-Oct-17

The sampling point is located in an upland meadow.

Hydrology

Wetland Hydrology Indicators:

Primary Indicators (minimum of one required; check all that apply)

- ☐ Surface Water (A1)
- ☐ High Water Table (A2)
- ☐ Saturation (A3)
- ☐ Water Marks (B1)
- ☐ Sediment Deposits (B2)
- ☐ Drift deposits (B3)
- ☐ Algal Mat or Crust (B4)
- ☐ Iron Deposits (B5)
- ☐ Inundation Visible on Aerial Imagery (B7)
- ☐ Sparsely Vegetated Concave Surface (B8)
- ☐ Water-Stained Leaves (B9)
- ☐ Aquatic Fauna (B13)
- ☐ Marl Deposits (B15)
- ☐ Hydrogen Sulfide Odor (C1)
- ☐ Oxidized Rhizospheres along Living Roots (C3)
- ☐ Presence of Reduced Iron (C4)
- ☐ Recent Iron Reduction in Tilled Soils (C6)
- ☐ Thin Muck Surface (C7)
- ☐ Other (Explain in Remarks)

Secondary Indicators (minimum of 2 required)

- ☐ Surface Soil Cracks (B6)
- ☐ Drainage Patterns (B10)
- ☐ Moss Trim Lines (B16)
- ☐ Dry Season Water Table (C2)
- ☐ Crayfish Burrows (C8)
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☐ Stunted or Stressed Plants (D1)
- ☐ Geomorphic Position (D2)
- ☐ Shallow Aquitard (D3)
- ☐ Microtopographic Relief (D4)
- ☐ FAC-neutral Test (D5)

Field Observations:

Surface Water Present?	Yes ○	No ◉	Depth (inches):	
Water Table Present?	Yes ○	No ◉	Depth (inches):	
Saturation Present? (includes capillary fringe)	Yes ○	No ◉	Depth (inches):	**Wetland Hydrology Present?** Yes ○ No ◉

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

NRCS WETS Table (Madison Dane Rgnl Ap, WI); NOAA AHHPS 90 Day % Normal Precip Map; 1995, 2005, 2010 and 2017 aerial photos

Column Totals:	141 (A)		559 (B)

Prevalence Index = B/A = 3.965

Hydrophytic Vegetation Indicators:

- ☐ **Rapid Test for Hydrophytic Vegetation**
- ☐ **Dominance Test is > 50%**
- ☐ **Prevalence Index is ≤3.0** [1]
- ☐ **Morphological Adaptations** [1] **(Provide supporting data in Remarks or on a separate sheet)**
- ☐ **Problematic Hydrophytic Vegetation** [1] **(Explain)**

[1] **Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.**

Definitions of Vegetation Strata:

Tree - Woody plants, 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.

Sapling/shrub - Woody plants less than 3 in. DBH and greater than 3.28 ft (1m) tall..

Herb - All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft tall.

Woody vine - All woody vines greater than 3.28 ft in height.

Hydrophytic Vegetation Present? Yes ○ No ◉

Remarks: (Include photo numbers here or on a separate sheet.)

*Indicator suffix = National status or professional decision assigned because Regional status not defined by FWS.

Soil

Sampling Point: 07

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth (inches)	Matrix Color (moist)	%	Redox Features Color (moist)	%	Type [1]	Loc[2]	Texture	Remarks
0-5	10YR 3/1						Fine Sandy Loam	fill
5-13	10YR 6/4						Loamy Fine Sand	fill
13-24	10YR 5/3	50					Sandy Loam	
13-24	10YR 2/1	50					Sandy Loam	

[1] Type: C=Concentration. D=Depletion. RM=Reduced Matrix, CS=Covered or Coated Sand Grains [2]Location: PL=Pore Lining. M=Matrix

Hydric Soil Indicators:

- ☐ Histosol (A1)
- ☐ Histic Epipedon (A2)
- ☐ Black Histic (A3)
- ☐ Hydrogen Sulfide (A4)
- ☐ Stratified Layers (A5)
- ☐ Depleted Below Dark Surface (A11)
- ☐ Thick Dark Surface (A12)
- ☐ Sandy Muck Mineral (S1)
- ☐ Sandy Gleyed Matrix (S4)
- ☐ Sandy Redox (S5)
- ☐ Stripped Matrix (S6)
- ☐ Dark Surface (S7) (LRR R, MLRA 149B)
- ☐ Polyvalue Below Surface (S8) (LRR R, MLRA 149B)
- ☐ Thin Dark Surface (S9) (LRR R, MLRA 149B)
- ☐ Loamy Mucky Mineral (F1) LRR K, L)
- ☐ Loamy Gleyed Matrix (F2)
- ☐ Depleted Matrix (F3)
- ☐ Redox Dark Surface (F6)
- ☐ Depleted Dark Surface (F7)
- ☐ Redox Depressions (F8)

Indicators for Problematic Hydric Soils : [3]

- ☐ 2 cm Muck (A10) (LRR K, L, MLRA 149B)
- ☐ Coast Prairie Redox (A16) (LRR K, L, R)
- ☐ 5 cm Mucky Peat or Peat (S3) (LRR K, L, R)
- ☐ Dark Surface (S7) (LRR K, L, M)
- ☐ Polyvalue Below Surface (S8) (LRR K, L)
- ☐ Thin Dark Surface (S9) (LRR K, L)
- ☐ Iron-Manganese Masses (F12) (LRR K, L, R)
- ☐ Piedmont Floodplain Soils (F19) (MLRA 149B)
- ☐ Mesic Spodic (TA6) (MLRA 144A, 145, 149B)
- ☐ Red Parent Material (F21)
- ☐ Very Shallow Dark Surface (TF12)
- ☐ Other (Explain in Remarks)

[3]Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if observed):

Type: None

Depth (inches): NA

Hydric Soil Present? Yes ○ No ◉

Remarks:

Upper portion of soil profile is likely historic fill.

WETLAND DETERMINATION DATA FORM - Northcentral and Northeast Region

Project/Site: Starkweather Aluminum Treatment Facility **City/County:** Madison / Dane **Sampling Date:** 16-Oct-17

Applicant/Owner: City of Madison - Engineering **State:** WI **Sampling Point:** 08

Investigator(s): Stautz, Stangel **Section, Township, Range:** S. 5 T. 7N R. 10E

Landform (hillslope, terrace, etc.): Floodplain **Local relief (concave, convex, none):** concave **Slope:** 0.0 % / 0.0 °

Subregion (LRR or MLRA): LRR K **Lat.:** **Long.:** **Datum:**

Soil Map Unit Name: Colwood silt loam, 0 to 2 percent slopes **NWI classification:** PEM1F

Are climatic/hydrologic conditions on the site typical for this time of year? Yes ◉ No ○ **(If no, explain in Remarks.)**

Are Vegetation ☐ **, Soil** ☐ **, or Hydrology** ☐ **significantly disturbed?** **Are "Normal Circumstances" present?** Yes ◉ No ○

Are Vegetation ☐ **, Soil** ☐ **, or Hydrology** ☐ **naturally problematic?** **(If needed, explain any answers in Remarks.)**

Summary of Findings - Attach site map showing sampling point locations, transects, important features, etc

Hydrophytic Vegetation Present?	Yes ◉ No ○	**Is the Sampled Area within a Wetland?**	Yes ◉ No ○
Hydric Soil Present?	Yes ◉ No ○		
Wetland Hydrology Present?	Yes ◉ No ○		

Remarks: (Explain alternative procedures here or in a separate report.)

The sampling point is located within a floodplain wetland adjacent to Starkweather Creek (Wetland 2).

Wetland Hydrology Present?	Yes ○	No ◉	

Remarks: (Explain alternative procedures here or in a separate report.)

The sampling point is located in an upland meadow.

Hydrology

Wetland Hydrology Indicators:

Primary Indicators (minimum of one required; check all that apply)

- ☐ Surface Water (A1)
- ☐ High Water Table (A2)
- ☐ Saturation (A3)
- ☐ Water Marks (B1)
- ☐ Sediment Deposits (B2)
- ☐ Drift deposits (B3)
- ☐ Algal Mat or Crust (B4)
- ☐ Iron Deposits (B5)
- ☐ Inundation Visible on Aerial Imagery (B7)
- ☐ Sparsely Vegetated Concave Surface (B8)
- ☐ Water-Stained Leaves (B9)
- ☐ Aquatic Fauna (B13)
- ☐ Marl Deposits (B15)
- ☐ Hydrogen Sulfide Odor (C1)
- ☐ Oxidized Rhizospheres along Living Roots (C3)
- ☐ Presence of Reduced Iron (C4)
- ☐ Recent Iron Reduction in Tilled Soils (C6)
- ☐ Thin Muck Surface (C7)
- ☐ Other (Explain in Remarks)

Secondary Indicators (minimum of 2 required)

- ☐ Surface Soil Cracks (B6)
- ☐ Drainage Patterns (B10)
- ☐ Moss Trim Lines (B16)
- ☐ Dry Season Water Table (C2)
- ☐ Crayfish Burrows (C8)
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☐ Stunted or Stressed Plants (D1)
- ☐ Geomorphic Position (D2)
- ☐ Shallow Aquitard (D3)
- ☐ Microtopographic Relief (D4)
- ☐ FAC-neutral Test (D5)

Field Observations:

Surface Water Present?	Yes ○	No ◉	Depth (inches):	
Water Table Present?	Yes ○	No ◉	Depth (inches):	
Saturation Present? (includes capillary fringe)	Yes ○	No ◉	Depth (inches):	**Wetland Hydrology Present?** Yes ○ No ◉

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

NRCS WETS Table (Madison Dane Rgnl Ap, WI); NOAA AHHPS 90 Day % Normal Precip Map; 1995, 2005, 2010 and 2017 aerial photos

Column Totals:	115 (A)		440	(B)

Prevalence Index = B/A = 3.826

Hydrophytic Vegetation Indicators:

- ☐ **Rapid Test for Hydrophytic Vegetation**
- ☐ **Dominance Test is > 50%**
- ☐ **Prevalence Index is ≤3.0** [1]
- ☐ **Morphological Adaptations** [1] **(Provide supporting data in Remarks or on a separate sheet)**
- ☐ **Problematic Hydrophytic Vegetation** [1] **(Explain)**

[1] **Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.**

Definitions of Vegetation Strata:

Tree - Woody plants, 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.

Sapling/shrub - Woody plants less than 3 in. DBH and greater than 3.28 ft (1m) tall..

Herb - All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft tall.

Woody vine - All woody vines greater than 3.28 ft in height.

Hydrophytic Vegetation Present? Yes ○ No ◉

Remarks: (Include photo numbers here or on a separate sheet.)

*Indicator suffix = National status or professional decision assigned because Regional status not defined by FWS.

Soil

Sampling Point: 10

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth (inches)	Matrix Color (moist)	%	Redox Features Color (moist)	%	Type [1]	Loc [2]	Texture	Remarks
0-7	10YR 5/4						Sand	+ Gravel
7-12	10YR 2/1		7.5YR 4/4	5	C	M	Silt Loam	
12+								Rock

[1] Type: C=Concentration. D=Depletion. RM=Reduced Matrix, CS=Covered or Coated Sand Grains [2] Location: PL=Pore Lining. M=Matrix

Hydric Soil Indicators:

- ☐ Histosol (A1)
- ☐ Histic Epipedon (A2)
- ☐ Black Histic (A3)
- ☐ Hydrogen Sulfide (A4)
- ☐ Stratified Layers (A5)
- ☐ Depleted Below Dark Surface (A11)
- ☐ Thick Dark Surface (A12)
- ☐ Sandy Muck Mineral (S1)
- ☐ Sandy Gleyed Matrix (S4)
- ☐ Sandy Redox (S5)
- ☐ Stripped Matrix (S6)
- ☐ Dark Surface (S7) (LRR R, MLRA 149B)
- ☐ Polyvalue Below Surface (S8) (LRR R, MLRA 149B)
- ☐ Thin Dark Surface (S9) (LRR R, MLRA 149B)
- ☐ Loamy Mucky Mineral (F1) LRR K, L)
- ☐ Loamy Gleyed Matrix (F2)
- ☐ Depleted Matrix (F3)
- ☑ Redox Dark Surface (F6)
- ☐ Depleted Dark Surface (F7)
- ☐ Redox Depressions (F8)

Indicators for Problematic Hydric Soils : [3]

- ☐ 2 cm Muck (A10) (LRR K, L, MLRA 149B)
- ☐ Coast Prairie Redox (A16) (LRR K, L, R)
- ☐ 5 cm Mucky Peat or Peat (S3) (LRR K, L, R)
- ☐ Dark Surface (S7) (LRR K, L, M)
- ☐ Polyvalue Below Surface (S8) (LRR K, L)
- ☐ Thin Dark Surface (S9) (LRR K, L)
- ☐ Iron-Manganese Masses (F12) (LRR K, L, R)
- ☐ Piedmont Floodplain Soils (F19) (MLRA 149B)
- ☐ Mesic Spodic (TA6) (MLRA 144A, 145, 149B)
- ☐ Red Parent Material (F21)
- ☐ Very Shallow Dark Surface (TF12)
- ☐ Other (Explain in Remarks)

[3] Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if observed):

Type: Rock

Depth (inches): 12

Hydric Soil Present? Yes ◉ No ○

Remarks:

The upper soil layer is likely historic fill. The soil was not examined below 12 inches due to rock. Unable to determine whether or not the rock is fill or natural.

WETLAND DETERMINATION DATA FORM - Northcentral and Northeast Region

Project/Site: Starkweather Aluminum Treatment Facility **City/County:** Madison / Dane **Sampling Date:** 19-Oct-17

Applicant/Owner: City of Madison - Engineering **State:** WI **Sampling Point:** 11

Investigator(s): Stautz, Stangel **Section, Township, Range:** S. 5 T. 7N R. 10E

Landform (hillslope, terrace, etc.): Hillslope **Local relief (concave, convex, none):** convex **Slope:** 0.0 % / 0.0 °

Subregion (LRR or MLRA): LRR K **Lat.:** **Long.:** **Datum:**

Soil Map Unit Name: Colwood silt loam, 0 to 2 percent slopes **NWI classification:** None

Are climatic/hydrologic conditions on the site typical for this time of year? Yes ◉ No ○ **(If no, explain in Remarks.)**

Are Vegetation ☐ **, Soil** ☐ **, or Hydrology** ☐ **significantly disturbed?** **Are "Normal Circumstances" present?** Yes ◉ No ○

Are Vegetation ☐ **, Soil** ☐ **, or Hydrology** ☐ **naturally problematic?** **(If needed, explain any answers in Remarks.)**

Summary of Findings - Attach site map showing sampling point locations, transects, important features, etc

Hydrophytic Vegetation Present?	Yes ◉	No ○	
Hydric Soil Present?	Yes ○	No ◉	**Is the Sampled Area within a Wetland?** Yes ○ No ◉
Wetland Hydrology Present?	Yes ○	No ◉	

Remarks: (Explain alternative procedures here or in a separate report.)

Although hydrophytic vegetation is present, the lack of wetland hydrology and hydric soil indicators suggest the sampling point is located on a large sand pile.

Hydrology

Hydrophytic Vegetation Present?	Yes ◉	No ○	
Hydric Soil Present?	Yes ○	No ◉	**Is the Sampled Area within a Wetland?** Yes ○ No ◉
Wetland Hydrology Present?	Yes ○	No ◉	

Remarks: (Explain alternative procedures here or in a separate report.)

Although hydrophytic vegetation is present, the lack of wetland hydrology and hydric soil indicators suggest the sampling point is located in an upland shrubby meadow.

Hydrology

Wetland Hydrology Indicators:

Primary Indicators (minimum of one required; check all that apply)

- ☐ Surface Water (A1)
- ☐ High Water Table (A2)
- ☐ Saturation (A3)
- ☐ Water Marks (B1)
- ☐ Sediment Deposits (B2)
- ☐ Drift deposits (B3)
- ☐ Algal Mat or Crust (B4)
- ☐ Iron Deposits (B5)
- ☐ Inundation Visible on Aerial Imagery (B7)
- ☐ Sparsely Vegetated Concave Surface (B8)
- ☐ Water-Stained Leaves (B9)
- ☐ Aquatic Fauna (B13)
- ☐ Marl Deposits (B15)
- ☐ Hydrogen Sulfide Odor (C1)
- ☐ Oxidized Rhizospheres along Living Roots (C3)
- ☐ Presence of Reduced Iron (C4)
- ☐ Recent Iron Reduction in Tilled Soils (C6)
- ☐ Thin Muck Surface (C7)
- ☐ Other (Explain in Remarks)

Secondary Indicators (minimum of 2 required)

- ☐ Surface Soil Cracks (B6)
- ☐ Drainage Patterns (B10)
- ☐ Moss Trim Lines (B16)
- ☐ Dry Season Water Table (C2)
- ☐ Crayfish Burrows (C8)
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☐ Stunted or Stressed Plants (D1)
- ☐ Geomorphic Position (D2)
- ☐ Shallow Aquitard (D3)
- ☐ Microtopographic Relief (D4)
- ☑ FAC-neutral Test (D5)

Field Observations:

Surface Water Present?	Yes ○	No ◉	Depth (inches):	
Water Table Present?	Yes ○	No ◉	Depth (inches):	
Saturation Present? (includes capillary fringe)	Yes ○	No ◉	Depth (inches):	**Wetland Hydrology Present?** Yes ○ No ◉

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

NRCS WETS Table (Madison Dane Rgnl Ap, WI); NOAA AHHPS 90 Day % Normal Precip Map; 1995, 2005, 2010 and 2017 aerial photos

Hydrophytic Vegetation Indicators:

- ☐ **Rapid Test for Hydrophytic Vegetation**
- ☑ **Dominance Test is > 50%**
- ☐ **Prevalence Index is ≤3.0** [1]
- ☐ **Morphological Adaptations** [1] **(Provide supporting data in Remarks or on a separate sheet)**
- ☐ **Problematic Hydrophytic Vegetation** [1] **(Explain)**

[1] **Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.**

Definitions of Vegetation Strata:

Tree - Woody plants, 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.

Sapling/shrub - Woody plants less than 3 in. DBH and greater than 3.28 ft (1m) tall..

Herb - All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft tall.

Woody vine - All woody vines greater than 3.28 ft in height.

Hydrophytic Vegetation Present? Yes ◉ No ○

Remarks: (Include photo numbers here or on a separate sheet.)

*Indicator suffix = National status or professional decision assigned because Regional status not defined by FWS.

Soil

Sampling Point: 13

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth (inches)	Matrix Color (moist)	%	Redox Features Color (moist)	%	Type [1]	Loc[2]	Texture	Remarks
0-9	10YR 4/3						Silty Clay Loam	
9-24	10YR 5/4		7.5YR 5/6	10	C	M	Fine Sandy Clay Loam	

[1] Type: C=Concentration. D=Depletion. RM=Reduced Matrix, CS=Covered or Coated Sand Grains [2]Location: PL=Pore Lining. M=Matrix

Hydric Soil Indicators:

- ☐ Histosol (A1)
- ☐ Histic Epipedon (A2)
- ☐ Black Histic (A3)
- ☐ Hydrogen Sulfide (A4)
- ☐ Stratified Layers (A5)
- ☐ Depleted Below Dark Surface (A11)
- ☐ Thick Dark Surface (A12)
- ☐ Sandy Muck Mineral (S1)
- ☐ Sandy Gleyed Matrix (S4)
- ☐ Sandy Redox (S5)
- ☐ Stripped Matrix (S6)
- ☐ Dark Surface (S7) (LRR R, MLRA 149B)
- ☐ Polyvalue Below Surface (S8) (LRR R, MLRA 149B)

Are Vegetation ☐ **, Soil** ☐ **, or Hydrology** ☐ **naturally problematic?** **(If needed, explain any answers in Remarks.)**

Summary of Findings - Attach site map showing sampling point locations, transects, important features, etc

Hydrophytic Vegetation Present?	Yes ◉	No ○	
Hydric Soil Present?	Yes ○	No ◉	**Is the Sampled Area within a Wetland?** Yes ○ No ◉
Wetland Hydrology Present?	Yes ○	No ◉	

Remarks: (Explain alternative procedures here or in a separate report.)

Although hydrophytic vegetation is present, the lack of wetland hydrology and hydric soil indicators suggest the sampling point is located in an upland shrubby meadow.

Hydrology

Wetland Hydrology Indicators:

Primary Indicators (minimum of one required; check all that apply)

- ☐ Surface Water (A1)
- ☐ High Water Table (A2)
- ☐ Saturation (A3)
- ☐ Water Marks (B1)
- ☐ Sediment Deposits (B2)
- ☐ Drift deposits (B3)
- ☐ Algal Mat or Crust (B4)
- ☐ Iron Deposits (B5)
- ☐ Inundation Visible on Aerial Imagery (B7)
- ☐ Sparsely Vegetated Concave Surface (B8)
- ☐ Water-Stained Leaves (B9)
- ☐ Aquatic Fauna (B13)
- ☐ Marl Deposits (B15)
- ☐ Hydrogen Sulfide Odor (C1)
- ☐ Oxidized Rhizospheres along Living Roots (C3)
- ☐ Presence of Reduced Iron (C4)
- ☐ Recent Iron Reduction in Tilled Soils (C6)
- ☐ Thin Muck Surface (C7)
- ☐ Other (Explain in Remarks)

Secondary Indicators (minimum of 2 required)

- ☐ Surface Soil Cracks (B6)
- ☐ Drainage Patterns (B10)
- ☐ Moss Trim Lines (B16)
- ☐ Dry Season Water Table (C2)
- ☐ Crayfish Burrows (C8)
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☐ Stunted or Stressed Plants (D1)
- ☐ Geomorphic Position (D2)
- ☐ Shallow Aquitard (D3)
- ☐ Microtopographic Relief (D4)
- ☑ FAC-neutral Test (D5)

Field Observations:

Surface Water Present?	Yes ○	No ◉	Depth (inches):	
Water Table Present?	Yes ○	No ◉	Depth (inches):	
Saturation Present? (includes capillary fringe)	Yes ○	No ◉	Depth (inches):	**Wetland Hydrology Present?** Yes ○ No ◉

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

NRCS WETS Table (Madison Dane Rgnl Ap, WI); NOAA AHHPS 90 Day % Normal Precip Map; 1995, 2005, 2010 and 2017 aerial photos

Column Totals:	130 (A)		360 (B)

Prevalence Index = B/A = 2.769

Hydrophytic Vegetation Indicators:

- ☐ **Rapid Test for Hydrophytic Vegetation**
- ☑ **Dominance Test is > 50%**
- ☑ **Prevalence Index is ≤3.0** [1]
- ☐ **Morphological Adaptations** [1] **(Provide supporting data in Remarks or on a separate sheet)**
- ☐ **Problematic Hydrophytic Vegetation** [1] **(Explain)**

[1] **Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.**

Definitions of Vegetation Strata:

Tree - Woody plants, 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.

Sapling/shrub - Woody plants less than 3 in. DBH and greater than 3.28 ft (1m) tall..

Herb - All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft tall.

Woody vine - All woody vines greater than 3.28 ft in height.

Hydrophytic Vegetation Present? Yes ◉ No ○

Remarks: (Include photo numbers here or on a separate sheet.)

*Indicator suffix = National status or professional decision assigned because Regional status not defined by FWS.

Soil

Sampling Point: 16

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth (inches)	Matrix Color (moist)	%	Redox Features Color (moist)	%	Type [1]	Loc[2]	Texture	Remarks
0-8	10YR 3/2						Sandy Loam	fill
8-22	10YR 8.5/2	50					Very Fine Sand	fill
8-22	10YR 4/3	50					Sandy Loam	fill
22+								Rock

[1] Type: C=Concentration. D=Depletion. RM=Reduced Matrix, CS=Covered or Coated Sand Grains [2]Location: PL=Pore Lining. M=Matrix

Hydric Soil Indicators:

- ☐ Histosol (A1)
- ☐ Histic Epipedon (A2)
- ☐ Black Histic (A3)
- ☐ Hydrogen Sulfide (A4)
- ☐ Stratified Layers (A5)
- ☐ Depleted Below Dark Surface (A11)
- ☐ Thick Dark Surface (A12)

Appendix 6:

NR 151 Susceptibility Table

Wetland Category for Stormwater Permitting *			
Wetland	Highly Susceptible	Moderately Susceptible	Less Susceptible
Wetland 1			X
Wetland 2			X
Wetland 3			X
Wetland 4			X
Wetland 5		X	

Less Susceptible: Dominated by 90% or greater invasive species

Moderately Susceptible: Sedge meadows, fens, bogs, forested wetlands, fresh wet meadows, shallow/deep marshes, various swamps

Highly Susceptible: Trout streams, threatened and endangered species, fish and wildlife refuges, calcareous fens, wild and scenic rivers

* These designations apply to any project requiring NR 151 stormwater permitting and are based on wetland delineation field work and the professional opinion of R.A. Smith National, Inc. Final determination of wetland susceptibilty ress with the WDNR. Some of the characteristics of a Highly Suscetible wetland may not be apparent to RASN due to confidential data or data beyond the scope of this delineation (i.e. rare species, high quality trout stream etc). Navigable waterways may also be subject to NR 151 protective area standards.

Voit Property
Preliminary Site Investigation – Milwaukee Street Development
July 28, 2017

The following summarizes our preliminary site investigation findings for the Voit property. The property consists of 64.30 acres and is located north of Milwaukee Street and east of Starkweather Creek, in the Town of Blooming Grove. Maps and other reports are included as an appendix to the report.

Annexation/Cooperative Plan
In April 2006, the Town of Blooming Grove approved a Cooperative Plan with the City of Madison. The Cooperative Plan guides annexation and development until October 31, 2027 ("Protection Period"). The plan also allows for an early termination period on January 1, 2019. The subject site is considered a "Cooperative Development Property" and according to the plan, the property shall remain in the Town for a period of time approximately half the length of the remaining Protection Period, or the time between the date of occupancy of substantial new development and October 31, 2027. At the designated midpoint of the remaining Protection Period, the Cooperative Development Property will then be automatically attached to the City. The midpoint of the agreement was June 25, 2016 and the property could or should have been attached to the City of Madison.

Soils:
Our investigation examined the USDA Soil Survey for the subject site. The USDA soil survey focuses on the surface soils for agricultural purposes and only describes soil to a maximum depth of approximately 6 ½ ft. There could be soils that are different from the general mapped soil. Therefore, the soil survey should be taken as a generality, as the site may reveal differences from the soil survey. After review, we note the following:

- No restrictive layers, including rock, within 6 ½ feet of the surface. Except for a 1.0-acre area in southeast quadrant of the property, which has restrictive textural stratification 29-40" from the surface.
- The water table depth is at or near the surface level in approximately two-thirds of the property and over 6 ½ feet deep through the remainder of the property.
- Well-drained soils cover the southern third of the site, and very poorly-drained soils cover the remainder. As such, hydric soils are present on the property, especially along the creek and around the pond.
- The southern third of the property consists of soils classified as Hydrologic Soil Group B. These soils tend to have moderately low runoff potential when thoroughly wet. These soils typically have between 10-20 percent clay and 50-90 percent sand. The remainder of the property contains Hydrologic Soil Group D soils. These soils have the highest runoff potential and the lowest infiltration rate. They are composed mostly of clay-based soils.
- Vierbicher recommends completing a geotechnical report to assess the ground water, topsoil depth, infiltration properties, and soil characteristics and boundaries.

Wetlands

The WDNR's Surface Water Data Viewer is the primary tool for conducting an initial review of the wetlands on a site. After review, we note the following:

- Wetland areas are present along the northern and western property boundaries.
- The northwest quadrant contains a 7.3-acre wet meadow lying atop Colwood silt loam.
- The northern tip of the property features 1.8 acres of Houghton muck, which has the capacity to store 23.9" of water.
- The east branch of Starkweather Creek runs along the western property boundary. The creek is approximately 30' wide and run south/southwest.
- A 5.0-acre pond is present in the northern half of the property, which was formed through the excavation and flooding of the quarry. The pond drains through a man-made drainage swale that spans approximately 700' to the creek.
- Vierbicher recommends completing a wetland delineation to identify the wetland limits and define the buildable areas of the site.

FEMA Floodplains

The WDNR's Surface Water Data also contains FEMA flood mapping data. After review, we note the following:

- The majority of the northern half of the site and the western boundary of the property are within the Starkweather Creek floodplain. The FEMA Floodplain Map indicates these areas "must be kept free of encroachment so that the 1% annual flood can be carried without significant increases in flood heights."
- The owners of the site have conducted approved land reclamation activities on the site that are located within the floodplain and the environmental corridor. A Letter of Map Amendment should be prepared and submitted to properly map the floodplain to match existing conditions of the site.
- Development in the floodplain shall not occur until the appropriate area is filled at least two (2) feet above the regional or base flood elevation, the fill is contiguous to land outside the floodplain, and the map is amended using the procedures established for zoning map amendments in Sec. 28.182.

Topography

The Dane County GIS LiDAR data is shown in the GIS mapping database. After review, we note the following:

- Steep slopes are present at the boundary between the southern farmland and the gravel pit. In a few locations, slopes exceed 85%.
- The parcel to the east of the pond features a raised elevation where an old quarry was filled in during land reclamation activities. The topography map shows that this area drains into the neighboring eastern property.
- The topography map illustrates two bow-shaped ponding areas in the floodplain. One is approximately 70' northwest of the pond. Aerial images illustrate that this was most likely the previous route of Starkweather Creek. Further investigation would be needed to confirm this hypothesis.
- The owners have been conducting approved land reclamation activities on the site; therefore, the reclamation activities changed the documented contour lines. Further topography investigation will create a detailed map and determine the buildable areas of the site.

Wellhead Protection Area

Madison Water Utilities' Wellhead Protection Program and maps were used to locate surrounding wells and research their respective contaminant time of travel from the property. After review, we note the following:

- Unit Well #8 lies approximately 3700' southwest of the property. The southern half of the property is within the 100-year contaminant time of travel. According to the Well Protection database, the Voit property has already been inspected and classified as low-medium risk for water contamination.
- Another private well was identified within the Voit property. The well is located in the southwest corner of the property, approximately 100' from the southern property line.
- The site is located outside the Unit Well Wellhead Protection Zones A and B and therefore, is not subject to land use restrictions in the Wellhead Units 8 and 11 Protection Plans.

Environmental Corridors

The Capital Area Regional Planning Commission (CARPC) manages the mapping of official Environmental Corridors in the Madison area. After reviewing their data in Dane County GIS, we note the following:

- The northern two-thirds of the property is within an Environmental Corridor. Development of the property must adhere to the guidelines provided by the CARPC and the WDNR.
- The environmental corridor includes the 75' buffer for Starkweather Creek, the 75' buffer of the wetland and the Starkweather 100-year floodplain (seen in the FEMA Map above).
- A major or minor amendment is necessary to transfer all or a portion of the land reclamation acres out of the Environmental Corridor boundary. An amendment would require a FEMA and DNR-approved change in the floodplain delineation.

Endangered Species

The WDNR's Natural Heritage Inventory Public Portal was used to determine if any protected species might be on the property. After review, we note the following:

- There are endangered species present that are legally protected. "Further actions are required to ensure compliance with Wisconsin's Endangered Species Law and the Federal Endangered Species Act."
- Further examination can be completed by submitting an Endangered Resource Review Request with the WDNR. The fee for this request is $75 per hour of research by the DNR. In previous requests, the total fee has been $75.

Archaeological Site Review

The Wisconsin Archaeological Site Inventory was queried for this property. After review, we note the following:

- There are no archaeological sites on the property, therefore no further action is necessary

Transportation:

Annual traffic counts and roadway level of service area maps were used to review the site. After review, we note the following:

- The site is currently served by the existing transportation network that can support additional personal vehicular users.
- The site is located adjacent to the East Side Transfer Station and therefore could reduce the potential traffic impact from the site.
- Milwaukee Street is a "standard arterial" street, and the City of Madison may require a Traffic Impact Analysis depending on the scale of additional residential units proposed on site.
- The north side of Milwaukee Street does not contain sidewalks or a multi-use trail; therefore, sidewalks may be required to be installed to connect to the transfer station.

Current Zoning and Approved Future Land Use:

According to the Cooperative Boundary Agreement, the property will be annexed into the City of Madison; therefore, we have reviewed the City of Madison Zoning and Future Land Use Maps. After review, we note the following:

Land Use

- The current Dane County land use map shows the property to be composed agriculture, open space, and material extraction lands.
- The current City of Madison Future Land Use map shows the quarry in the northern portion of the property east of Starkweather Creek designated as park and open space. The portion of the property south of the quarry along Milwaukee Street is designated as low-density residential.
- The Madison Future Land Use map also designates the area adjacent to the site as a potential transit-oriented development (TOD) area.
- The City of Madison is currently updating the comprehensive plan to reflect the future needs of the community. According to the draft plan the subject area increased the future density from low-density residential to medium-density residential. The area adjacent to the site is designated as community mixed-use.

Zoning

- In response to potential changes to the future land use map, TOD designation in the Comprehensive Plan, and immediate proximity to the East Side Transfer Station, the appropriate zoning district to facilitate the development of the site would be a *Neighborhood Mixed-Use District with a potential Transit-Oriented Development Overlay District.*
- The full list of permitted and conditional uses is included within the appendix; however, a summary of the possible permitted uses is as follows:
  - General Office
  - General service
  - Multifamily uses (less than 4 units)
  - Multifamily uses (CUP greater than 4 units)
  - Single-family attached
  - Mixed-use buildings

NMU Site Development Standards:

Height:	3 Stories/40 feet (increased by conditional use permit)
Lot Coverage:	75%
Usable Open Space:	160 square feet per lodging unit or 1-bedroom unit 320 square feet for >1-bedroom units
Setbacks (side):	One Story/5 feet, and greater than one story/6 feet
Setbacks (year):	20 feet

Airport Zoning:

The site is located within the Three-Mile limit. The maximum height above sea level is approximately 970 feet. Therefore, the site has approximately 100 feet of buildable elevation.

Existing Utility Availability / Capacity

The Town of Blooming Grove is the municipality for the property, however all utilities found along Milwaukee Street were from the City of Madison municipality. These City of Madison utilities were analyzed using GTWeb maps and information.

- Water Main:
  - A water main runs along the south side of Milwaukee Street. The water main's diameter is 10" west of the Leon Street connection and 12" east of the connection. Four 6" water mains connect to the Milwaukee Street main, running along Leon Street, Lansing Street, Harding Street and Walter Street.
  - A hydrant, connected to the Milwaukee street water main, is located on the southwest corner of the Voit property.
  - Since the existing water mains are about 70 years old, the City of Madison may deem it necessary to replace the mains in conjunction with the development of this property.

- Sanitary Sewer:
  - Currently, there is no sanitary sewer main running along Milwaukee Street adjacent to the Voit property. An existing private lateral from the Lansing Street sanitary main currently serves the two existing properties north of Milwaukee Street.
  - There are four 8" sanitary sewer mains present on Leon Street, Lansing Street, Harding Street and Walter Street. The sewer main on Lansing Street crosses Milwaukee Street to a private 4" PVC lateral which serves the two existing properties north of Milwaukee Street.
  - The four 8" sewer lines run south-southwest connecting with the 10" sanitary line on Starkweather Drive. This line becomes 12" at the Lansing Street intersection.
  - Further coordination with the City of Madison will be required to determine capacity of the 8" sewer mains to the south. This will enable us to discern the quantity of additional flow these mains can handle from the proposed development and whether or not they will need to be upsized.
- Stormwater:
  - No existing stormwater utilities were shown on Milwaukee Street.
  - As mentioned above, the northeast parcel of the property drains into the neighboring property. Additionally, the topography shows the property naturally drains into Starkweather Creek and the pond. The pond drains into Starkweather Creek through a manmade waterway during floodstage.
  - Stormwater features will be required to control stormwater discharge from the site. A detention basin will likely be required somewhere along the western property line to control stormwater runoff. For planning purposes, 10-12% of the property should be reserved for stormwater management.

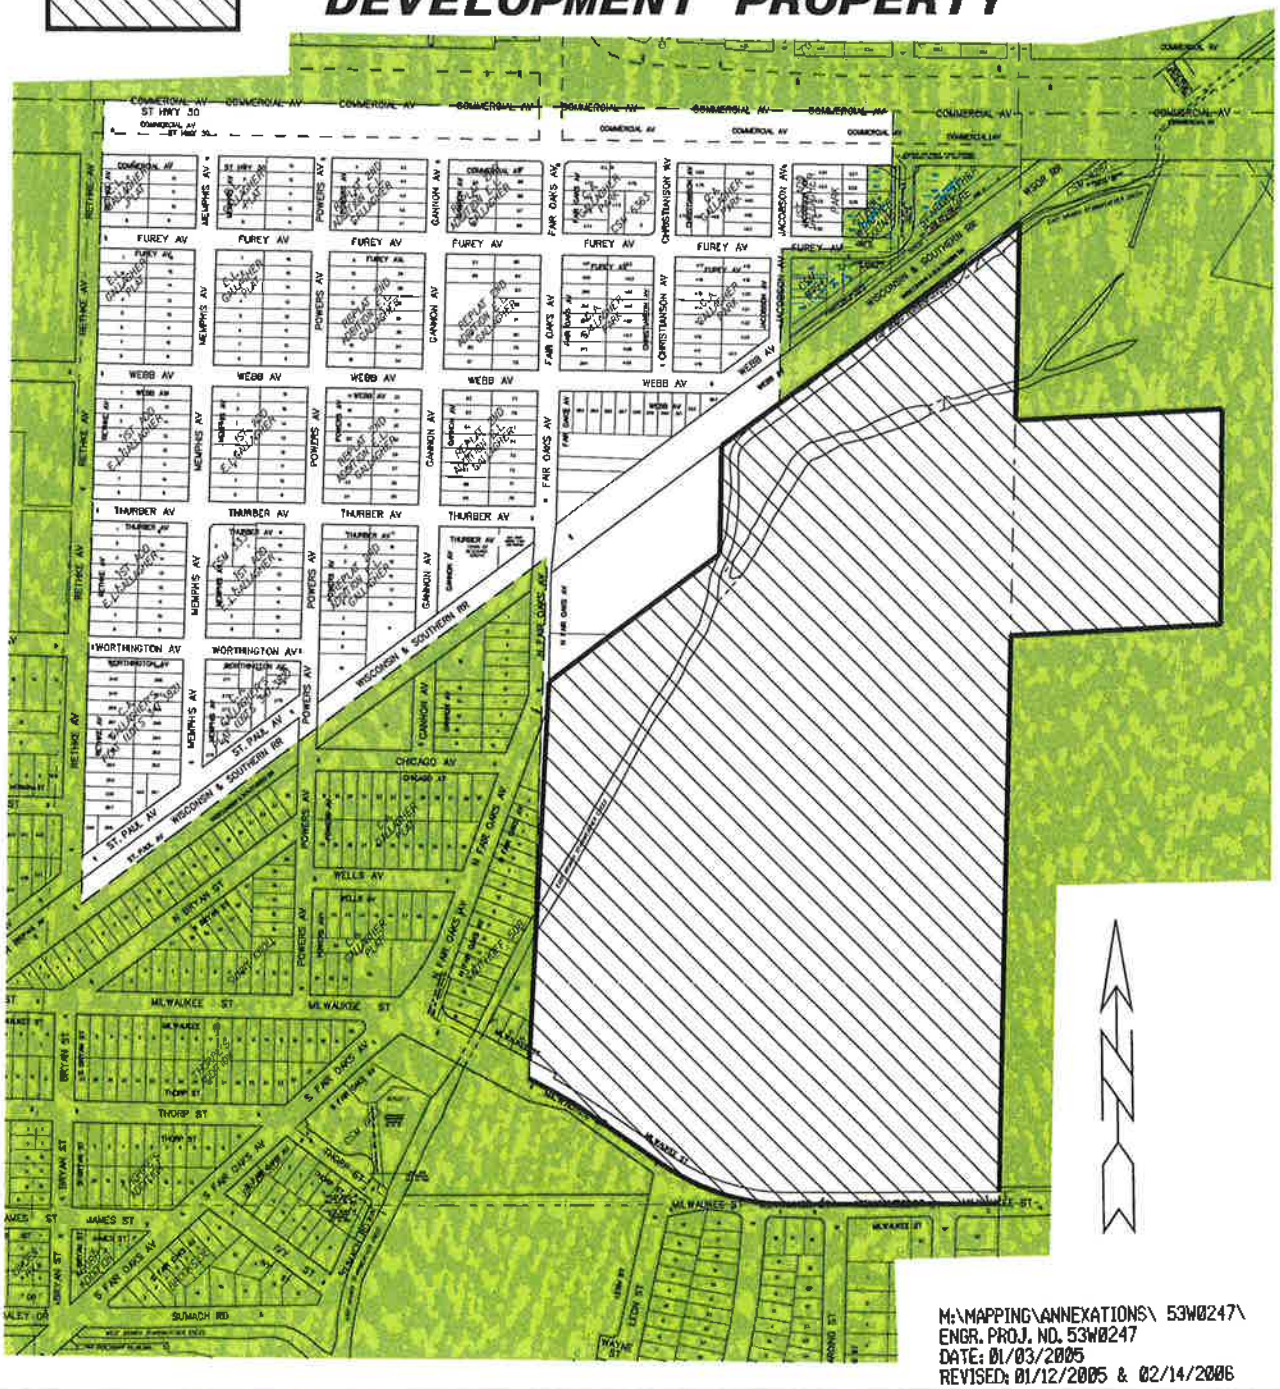
COOPERATIVE PLAN CITY OF MADISON & TOWN OF BLOOMING GROVE

COOPERATIVE DEVELOPMENT PROPERTY



M:\MAPPING\ANNEXATIONS\ 53W0247\
ENGR. PROJ. NO. 53W0247
DATE: 01/03/2005
REVISED: 01/12/2005 & 02/14/2006

SECTION 7
CURRENT LAND USE AND PHYSIOGRAPHIC CONDITIONS OF THE TERRITORY OF THE COOPERATIVE PLAN AREA

The territory subject to and covered by this Cooperative Plan is the entire Town of Blooming Grove. The Cooperative Plan Area is also included in the City's Comprehensive Plan (the "Comprehensive Plan"), adopted on January 17, 2006. The territory covered by the Comprehensive Plan is referred to herein as the "Comprehensive Plan Area." The City's Comprehensive Plan includes a description of existing conditions within the Comprehensive Plan Area. The existing conditions and background section of the Comprehensive Plan provides a narrative summary of existing land uses, topography and natural features, stormwater drainage, and site analyses. The Comprehensive Plan includes a series of maps summarizing existing conditions and growth and development problems and opportunities in the area covered by the Plan.

In addition the following more detailed neighborhood development plans covering some of the Cooperative Plan Area include:

- Cottage Grove Neighborhood Development Plan, 1992
- Sprecher Neighborhood Development Plan, 1998
- Marsh Road Neighborhood Development Plan, 1999

The adopted neighborhood development plans guide the City's growth and development and extension of urban services within each of the neighborhoods. Some urban development has begun in all planned neighborhoods covered by adopted neighborhood development plans Included as **Exhibit 4**, is a current land use map for the Cooperative Plan Area which shows the level of existing development within the Cooperative Plan Area.

The City's Peripheral Area Development Plan was prepared by the City and adopted in 1990. While the more recent and more detailed neighborhood development plans provide more current adopted policy recommendations for the Comprehensive Plan Area, the Peripheral Area Development Plan contains useful background information on conditions which existed within the Comprehensive Plan Area, and the growth and development policy recommendations applicable to this area in 1990. The Comprehensive Plan updates the City's 1990 Peripheral Area Development Plan.

In addition to the City's adopted plans, the Town of Blooming Grove has prepared a Comprehensive Plan ("Town Comprehensive Plan"), which was adopted September 13, 2005. The Town Comprehensive Plan provides a general description of the physiographic conditions within the Town, a demographic profile, household characteristics, population projections, a summary of existing and proposed land uses and all nine required elements under the State's Smart Growth Law. In 2002, the Dane County Regional Planning Commission published a report based on the 2000 Decennial Census and the results of a 2000 Land Use Inventory for the County. This report entitled Dane County and Community Data 1970-2000, provides updated

data on the socio-economic characteristics of both the Town of Blooming Grove and the City of Madison and a land use inventory for both communities.

While there are large undeveloped parcels remaining in the area east of Interstate 39/90, the vast majority of the remaining area of the Town has been subdivided, primarily for single-family detached housing. Land use changes and development proposals within the Town will be guided by the Town's adopted plans and the City's adopted plans and by the specific requirements included within the Cooperative Plan.

SECTION 8
PROVISION OF SANITARY SEWER AND WATER SERVICE AND DEVELOPMENT IN COOPERATIVE PLAN AREA OUTSIDE OF PROTECTED AREAS

The City will plan for and construct public sanitary and water service infrastructure throughout the Cooperative Plan Area, outside of Protected Areas, from time to time, as Town lands become attached to and developed in the City. With two conditional exceptions noted below, the City will continue its ordinance policy of not extending public sewer and water to serve unincorporated territory outside of Protected Areas.

First, as briefly mentioned above in subsection 4.B. and as discussed in more detail in Section 11.C. below, the jointly approved development of the Cooperative Development Property shall be initially developed within the Town, but on City public water and sewer utility service. The Cooperative Development Property shall remain in the Town for a period of time approximately one-half of the remaining Protected Period, or the time between the date of occupancy of substantial new development and October 31, 2027. Then, at the designated midpoint of the remaining Protected Period, the Cooperative Development Property will be automatically attached to the City. Consequently, the City will be upholding its ordinance policy by extending public sewer and water service to the Cooperative Development Property only upon an irrevocable commitment of the Cooperative Development Property's automatic attachment to the City under a boundary adjustment provision of this Plan.
Second, property in the Town may receive City sewer and water service as more specifically described in Section 12.C. of this Plan. The conditions of receiving such utility services are that the said services must be reasonably available, the property must be in the Urban Service Area, and the owner must agree to pay any costs of extension and connection to those services, plus interest thereon, over a five-year period and must further agree to attachment of the property to the City at the end of the five-year period, unless the subject property is already scheduled for attachment in less than five years under either a Phased or Final Attachment. The procedure to be followed for implementation of the property owner's agreement to attach may be through the contemporaneous adoption of an Intermediate Attachment ordinance with the effective date of attachment delayed for the five-year period. The City will be upholding its ordinance policy by extending public sewer and water service only upon an irrevocable commitment of attachment. Instead of paying to fix private wells and/or failing septic systems, the property owner will pay the initial costs of extension and connection to the City public utility services over five years, without also having to pay a higher local share of property taxes to the City during the same five-year period.

Prior to lands being served by public sewer service, the land must be included in the Central Urban Service Area or a limited service area under the provisions of the Dane County Land Use and Transportation Plan and the Water Quality Management Plan. To establish a limited service area or to amend the Central Urban Service Area boundary, the Dane County Community Analysis and Planning Division, or a successor agency to the Dane County Regional Planning Commission, and the Wisconsin Department of Natural Resources must approve the request.

SECTION 9
ATTACHMENT OF TOWN TERRITORY TO CITY

A. Immediate Attachment. The Ho-Chunk Nation lands, located south of Millpond Road, together with certain highway right of way segments, described in the legal description and shown on the map attached hereto as **Exhibit 5**, shall be attached to the City by adoption of an attachment ordinance adopted by a majority of the members of the City's Common Council, and without the consent of the owners or electors. Such ordinance shall become effective upon final State approval of this Cooperative Plan. At that time, the City Clerk shall provide notice of this Immediate Attachment, as required under the Procedure for Intermediate Attachments in paragraph 10.A.(2) below.

B. Intermediate Attachments. During the Protected Period, there may be an unlimited number of Intermediate Attachments of Town territory north of Siggelkow Road, except lands in the Protected Areas or as expressly provided in this Plan, to the City prior to either of the two Phased Attachments or the Final Attachment hereinafter provided. The Procedure for Intermediate Attachments recognizes a compromise respecting the desire of the current property owners to remain Town property owners for as long as the Protected Period of this Cooperative Plan, subject to Phased Attachment in 2015 or 2020, or Final Attachment in 2027, unless those property owners petition the City for Intermediate Attachment. Approval of resident electors shall not be required.

C. Protected Areas. During the Protected Period, the City shall not attach any territory from the following areas in the Town that are described in the descriptions and shown on the map attached hereto and incorporated herein as **Exhibit 6** (the "Protected Areas"): Gallagher Plat; Gallagher Garden; April Hill Subdivision; Rambling Acres Subdivision; Freeway Manor; Weather Oaks; the existing developed business and commercial areas along US Highway 12/18.

D. Rustic Acres. The area known as "Rustic Acres" in the northeast portion of the Town is shown and described in the map and description attached hereto and incorporated herein as **Exhibit 7**. During the Protected Period, the City may attach territory in Rustic Acres, in accordance with the provisions of subsection 9.B. above. However, Rustic Acres is not included in the North Phased Attachment Area of subsection 9.E. below.

E. Phased Attachments. All or part of Town territory east of the western right-of-way line of Interstate 39/90 and north of Siggelkow Road, as described in the description and

shown on the map attached hereto as **Exhibit 8** (the "North and South Phased Attachment Areas"), except territory in the Protected Areas, Rustic Acres (as described in subsections 9.C. and D. above), and the territory north of Weather Oaks described and shown in the legal description and diagram attached hereto as **Exhibit 9**, is subject to early attachment to the City, without the consent of property owners or electors, as described in subsection 10.B. below. Intermediate Attachments with the consent of the property owner are also permissible within the North and South Phased Attachment areas. The territory north of Weather Oaks shown on Exhibit 9 may be attached by the City in accordance with subsection 9.F. below.

F. General Attachment Provisions.

(1) The Town shall not oppose any attachments permitted by this Cooperative Plan or provide support, financial or otherwise, to those who do.

(2) The City shall be responsible for all municipal services in the attached territory beginning on the effective date of the respective attachment.

(3) Notwithstanding any amendment of the statutes subsequent to the effective date of this Plan, and except as otherwise provided in this Plan, the Town shall be entitled to all taxes (as between the City and the Town) for the year in which the attachment is effective, and revenue sharing from the City to the Town for all Immediate, Intermediate and Phased Attachments of Town territory shall be for five (5) years, as provided for annexations under 2003 Wisconsin Act 317.

(4) Except as expressly allowed in this Plan, the City shall not attach any territory contrary to the wishes of any owners of the parcels proposed for attachment. Approval of resident electors shall not be required for any attachments to the City.

G. Attachment of Cooperative Development Property. During the Protected Period, the City may attach the Cooperative Development Property, only in accordance with the provisions of subsection 11.C. below, by adoption of an attachment ordinance adopted by a majority of the members of the City's Common Council, and without the consent of the owners or electors of the Cooperative Development Property. At that time, the City Clerk shall provide notice of this Attachment, as required under the Procedure for Intermediate Attachments in paragraph 10.A.(2) below.

H. Final Attachment. Final attachment of all territory remaining in the Town at the end of the Protected Period, including any territory south of Siggelkow Road, shall be effective at the end of the Protected Period, 11:59 p.m. on October 31, 2027, pursuant to a Final Attachment Ordinance, which shall be adopted by a majority of the elected members of the City Common Council, attaching all remaining Town lands to the City. The Parties acknowledge and agree that the City's adoption of the Final Attachment Ordinance is a fundamental condition and that absent the adoption of the Final Attachment Ordinance, the Parties would not have entered into this Plan. In the event the City does not adopt the Final Adoption Ordinance as required by this Plan, the Town may seek specific performance of this provision from a court of competent jurisdiction. The Final Attachment Ordinance may designate temporary or permanent zoning classifications for each parcel of land as prescribed in Sec. 62.23(7)(d), Wis. Stats. No revenue

sharing shall be paid by either party. However, the Town shall take all necessary steps to transfer all Town assets and liabilities to the City on or before the end of the Protected Period. The City Clerk shall file, record, or send the Final Attachment Ordinance in the same manner as described under paragraph 10.A.(2) below.

I. Intermunicipal Cooperation Agreement Between Madison and McFarland.

The City and the Village of McFarland, Wisconsin ("Village"), have entered into an agreement entitled "Intermunicipal Cooperation Agreement Between the City of Madison and the Village of McFarland relating to Lands Easterly of Marsh Road, Northerly of Eighmy Road, and Southerly of Siggelkow Road" dated November 26, 1997 (the "McFarland Agreement"). The McFarland Agreement has a term of 20 years, which expires on or about April 1, 2018. The McFarland Agreement provides in relevant part that no property south of Siggelkow Road and between School Street and County Highway AB (the "Southern Siggelkow Area") shall be annexed to the City during the term of the McFarland Agreement. The Town acknowledges that the City and the Village may make arrangements prior to or after the expiration of the McFarland Agreement that would allow any property in the Southern Siggelkow Area that becomes a part of the City on the Transition Date pursuant to this Plan under subsection H. above, to be detached from the City and attached to the Village after the Transition Date.

SECTION 10
PROCEDURE FOR INTERMEDIATE AND PHASED ATTACHMENT

A. Procedure for Intermediate Attachments. The procedure for Intermediate Attachment of territory from the Town to the City shall be as follows:

(1) Upon written petition for attachment filed with the City Clerk on City forms signed by all of the owners of all the land, exclusive of Town roads abutting such land, the City may, with ten (10) days advance, written notice to Town Clerk, without further review and approval of the Town, and without mandatory review and recommendation by the City Plan Commission or any other sub-unit of City, adopt Attachment Ordinances by a majority of the elected members of its Common Council attaching the territory constituting the Intermediate Attachment. Town territory included in an Intermediate Attachment will be attached to the City effective at 12:01 a.m., on the next Monday after adoption of the respective Attachment Ordinance, unless a different date is specified therein. The City may adopt Attachment Ordinances for Town parcels whose owners request City public water or sewer utility service, with a delayed effective date of up to five years, as described in Section 8 of this Plan. The Attachment Ordinances may designate a temporary zoning classification for each parcel. .

(2) Following adoption of each such Attachment Ordinance, the City Clerk shall immediately file, record and send copies of the same, in accordance with Sec. 66.0217(9)(a), Wis. Stats, as incorporated by Sec. 66.0307(10). Failure to file, record or send shall not invalidate the attachment and the duty to file, record or send shall be a continuing one. The information filed with the Secretary of State shall be utilized in making adjustments to entitlements under the federal revenue sharing program and distribution of funds under chapter

79, Wis. Stats., and to any successor or other federal or state entitlement or revenue-sharing program.

(3) No land shall be attached to the City as an Intermediate Attachment without the consent of the owner(s). Where a petition for attachment involves residential property occupied by electors other than the owner(s) (or land contract vendee), only the owner(s) have the right to consent to and petition for the attachment. Approval of resident electors shall not be required.

(4) All Intermediate Attachments shall include one half of the full width of abutting Town roads.

(5) Territory may be attached to the City, under this Cooperative Plan, irrespective of the size, or shape of the territory covered by the petition. Such attachments may create Town Islands. The City, however, may reject any petition to attach territory that is not contiguous, configured or located in a manner as will enable City to provide adequate and timely service.

B. Procedure for Two Phased Attachments. The procedure for the two Phased Attachments shall be as follows:

(1) All or part of Town territory east of the western right-of-way line of Interstate 39/90 and north of the northern Chicago & Northwestern Railroad right-of-way line described and shown on **Exhibit 8 North** (the "North Phased Annexation Area") that has not previously been voluntarily annexed or attached to the City by January 1, 2015 may become a part of the City as follows:

(a) At any time between January 1, 2015 and August 31, 2015, the City, upon a 2/3 vote of the elected members of the City's Common Council, may adopt an ordinance attaching such territory. The attachment shall be effective as of 12:01 a.m. on the last Monday in December 2015. Unless otherwise agreed to by the Parties in writing, if the Town gives written notice to the City Clerk between January 1, 2015 and April 30, 2015 reminding the City of the City's right to attach under this subsection, then the City shall lose the right if it is not exercised by August 31, 2015. If the Town fails to give such notice and the City fails to exercise its right, then the City may, by June 30 of any year after 2015, adopt an ordinance attaching such territory effective at 12:01 a.m. on the last Monday in December of the same year.

(b) As a complete alternative to the City adopting an ordinance attaching such territory as provided in this paragraph (1), the City and the Town may agree in writing to a different schedule for attaching all or part of such territory to the City after January 1, 2015.

(2) All or part of Town territory east of the western right-of-way line of I-39/90, south of the northern Chicago & Northwestern Railroad right-of-way line and north of Siggelkow Road described and shown on **Exhibit 8 South** (the "South Phased Attachment Area") that has not been voluntarily annexed or attached to the City by January 1, 2020 may become a part of the City as follows:

(a) At any time between January 1, 2020 and August 31, 2020, the City, upon a 2/3 vote of the elected members of the City's Common Council, may adopt an ordinance attaching such territory. The attachment shall be effective as of 12:01 a.m. on the last Monday in December 2020. Unless otherwise agreed to by the Parties in writing, if the Town gives written notice to the City Clerk between January 1, 2020 and April 30, 2020 reminding the City of the City's right to attach under this subsection, then the City shall lose the right if it is not exercised by August 31, 2020. If the Town fails to give such notice and the City fails to exercise its right, then the City may, by June 30 of any year after 2020, adopt an ordinance attaching such territory effective at 12:01 a.m. on the last Monday in December of the same year.

(b) As a complete alternative to the City adopting an ordinance attaching such territory as provided in this paragraph (2), the City and the Town may agree in writing to a different schedule for attaching all or part of such territory to the City after January 1, 2020.

SECTION 11
LOCAL ORDINANCES AFFECTING PLAN AREA

The Plan Area, during the term of this Cooperative Plan, shall be governed by City, County and Town General Ordinances, and by applicable zoning ordinances as hereinafter provided:

A. Attached Territory. Town territory attached to the City from time to time under this Cooperative Plan shall become City territory subject to all City Zoning and General Ordinances on the effective date of attachment.

B. Development of Town Territory. All Town territory, other than the Cooperative Development Property as provided in subsection C. below, not yet attached shall be subject to applicable zoning ordinances and the following rules:

(1) Any development in the Town shall be subject to approval by the City in accordance with City Development Requirements. In the Protected Areas, the full range of urban services may not be required, in the sole discretion of the City. In areas outside of the Protected Areas, the full range of urban services, including City water and sewer service, and attachment to the City may not be required, in the sole discretion of the City. The Town shall not grant any development approvals inconsistent with this paragraph.

(2) All new or replacement signs, billboards or street graphics ("signs") not part of any development shall comply with the restrictions of the Madison Street Graphics Control Ordinance, Chapter 31, Madison General Ordinances and with the applicable Dane County sign regulations. In the event of a conflict between the Madison and Dane County sign regulations, the more restrictive regulatory provision shall apply. The Town agrees to condition any electrical or other permits that it issues for new signs upon City approval that the proposed sign complies with the Madison Street Graphics Control Ordinance.

(3) The division of a five (5) acre or larger parcel (including parcels that are less than 5 acres because of a property acquisition by the City) existing as of February 18, 2005, into only two parcels for residential purposes shall not be considered "development" under this Plan, and the owners may divide and rezone the parcel to a single-family residential district and construct a single-family residence on each new parcel without the cooperation or approval of the City. A "parcel" is defined as the contiguous lands within the control of a single owner.

(4) The City shall use its best efforts to give notice of zoning and other land use hearings, decisions and actions to the owners of record of properties in the Town, within the same distance from an affected property, in the same manner and on the same basis as it gives notice to the owners of record of properties in the City. The Town shall cooperate with the City to enable such notice. A failure to give notice shall not itself constitute a breach of this Cooperative Plan, but intentional, persistent or habitual failure to give notice shall be considered a breach of this Cooperative Plan.

C. Development and Attachment of the Cooperative Development Property. The City and the Town specifically agree to work cooperatively on the joint planning and development of properties north of Milwaukee Street and along North Fair Oaks Avenue (the "Cooperative Development Property"). The Cooperative Development Property is described in the legal description and shown on the map attached hereto and incorporated herein as **Exhibit 3**.

(1) The City and the Town shall cooperate to establish zoning over the Cooperative Development Property, pursuant to the procedure attached hereto and incorporated herein as **Exhibit 10**, to allow the development of the Cooperative Development Property while the Cooperative Development Property is in the Town, consistent with the Town's Comprehensive Plan and the City's Comprehensive Plan in effect at the time zoning is established. At the present time, those plans would allow development for residential single family and multi-family use, including senior elderly housing, and some limited amount of mixed uses including neighborhood commercial uses, and associated improvements including roads, utilities, parkland, multipurpose trails, wetlands, other open spaces, ponds, and other governmental uses. The zoning established by the Parties will be effective in the City when the Cooperative Development Property is annexed to the City pursuant to this Plan. Any new construction of principal structures or development of the Cooperative Development Property shall require the review and approval of both the Town and the City and, unless the Parties agree otherwise, shall be conditioned upon compliance with City Development Requirements, including payments of all applicable special assessments, extension and connection charges and impact fees associated with the development of the Cooperative Development Property. As long as the anticipated value of the improvements to the Cooperative Development Property is at least $10,000,000, upon full build-out of the development, including all phases of the development, the City shall extend public water and sewer services to the Cooperative Development Property in advance of attachment in order to support development approved by the City and the Town.

(2) In the event new principal structures are constructed on the Cooperative Development Property or the Cooperative Development Property is developed after February 18, 2005, the Cooperative Development Property shall remain in the Town and shall not be annexed

to the City for a period of time that is equal to approximately one-half of the period of time between: (a) the "Occupancy/Assessment Date," which is the date upon which an occupancy certificate/permit has been issued for new principal structures on the Cooperative Development Property and the assessed or appraised value of the new principal structures (excluding the value of public improvements such as streets or water and sewer facilities) is $2,000,000.00 (Two million dollars) as jointly determined by the City's property tax assessor and the Town's property tax assessor; and (b) the Transition Date. In the event that the City's property tax assessor and the Town's property tax assessor cannot agree on the assessed or appraised value of the new principal structures on the Cooperative Development Property, the Parties shall jointly choose a third party with the appropriate experience to determine the assessed or appraised value of the new principal structures on the Cooperative Development Property. The Cooperative Development Property shall be automatically attached to the City effective as of 12:01 a.m. on the last Monday in December in the year which is closest to the mid-point between the Occupancy/Assessment Date and the Transition Date (the "Cooperative Development Property Base Year"). In the event that no new principal structures are constructed on the Cooperative Development Property or the Cooperative Development Property is not developed after February 18, 2005, the Cooperative Development Property shall remain in the Town until the Transition Date.

(3) In lieu of the revenue sharing for attachments provided in subsection 16.A. of this Plan, the Town shall keep 100% of the local government share of tax revenues collected by the Town for the Cooperative Development Property while the Cooperative Development Property is in the Town and for the Cooperative Development Property Base Year ("base year revenue sharing amount"). Payments received by the Town in lieu of taxes, if any, shall not be included in the base year revenue sharing amount, and the City shall receive any and all such payments in lieu of taxes following attachment of the Cooperative Development Property as long as the City is responsible for providing the municipal services covered by such payments. Additionally, the City shall pay the Town 70% of the base year revenue sharing amount from taxes it collects from the Cooperative Development Property for the tax year after the Cooperative Development Property Base Year; and 50% of the base year revenue sharing amount from taxes it collects for the second year after the Cooperative Development Property Base Year. Payments are due in two equal installments: the first due on February 15 and the second due on August 15 of the second and third years after the year of attachment, respectively.

D. Development of Attached Rustic Acres Territory. In the event the City attaches territory in Rustic Acres after February 18, 2005, development shall be allowed as follows:

(1) Lots in Rustic Acres in existence on February 18, 2005 that are immediately adjacent to Milwaukee Street or Sprecher Road may be developed in compliance with the City's neighborhood development plan or Comprehensive Plan in effect at the time such lots are developed, and in compliance with the City Development Requirements.

(2) For all other lots in Rustic Acres in existence on February 18, 2005, development shall be limited to residential land uses and necessary associated improvements including roads, utilities, parkland, and other governmental uses. Residential densities shall be limited to an

Custom Soil Resource Report for Dane County, Wisconsin

June 22, 2017

Preface

Soil surveys contain information that affects land use planning in survey areas. They highlight soil limitations that affect various land uses and provide information about the properties of the soils in the survey areas. Soil surveys are designed for many different users, including farmers, ranchers, foresters, agronomists, urban planners, community officials, engineers, developers, builders, and home buyers. Also, conservationists, teachers, students, and specialists in recreation, waste disposal, and pollution control can use the surveys to help them understand, protect, or enhance the environment.

Various land use regulations of Federal, State, and local governments may impose special restrictions on land use or land treatment. Soil surveys identify soil properties that are used in making various land use or land treatment decisions. The information is intended to help the land users identify and reduce the effects of soil limitations on various land uses. The landowner or user is responsible for identifying and complying with existing laws and regulations.

Although soil survey information can be used for general farm, local, and wider area planning, onsite investigation is needed to supplement this information in some cases. Examples include soil quality assessments (http://www.nrcs.usda.gov/wps/portal/nrcs/main/soils/health/) and certain conservation and engineering applications. For more detailed information, contact your local USDA Service Center (https://offices.sc.egov.usda.gov/locator/app?agency=nrcs) or your NRCS State Soil Scientist (http://www.nrcs.usda.gov/wps/portal/nrcs/detail/soils/contactus/?cid=nrcs142p2_053951).

Great differences in soil properties can occur within short distances. Some soils are seasonally wet or subject to flooding. Some are too unstable to be used as a foundation for buildings or roads. Clayey or wet soils are poorly suited to use as septic tank absorption fields. A high water table makes a soil poorly suited to basements or underground installations.

The National Cooperative Soil Survey is a joint effort of the United States Department of Agriculture and other Federal agencies, State agencies including the Agricultural Experiment Stations, and local agencies. The Natural Resources Conservation Service (NRCS) has leadership for the Federal part of the National Cooperative Soil Survey.

Information about soils is updated periodically. Updated information is available through the NRCS Web Soil Survey, the site for official soil survey information.

The U.S. Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, age, disability, and where applicable, sex, marital status, familial status, parental status, religion, sexual orientation, genetic information, political beliefs, reprisal, or because all or a part of an individual's income is derived from any public assistance program. (Not all prohibited bases apply to all programs.) Persons with disabilities who require

alternative means for communication of program information (Braille, large print, audiotape, etc.) should contact USDA's TARGET Center at (202) 720-2600 (voice and TDD). To file a complaint of discrimination, write to USDA, Director, Office of Civil Rights, 1400 Independence Avenue, S.W., Washington, D.C. 20250-9410 or call (800) 795-3272 (voice) or (202) 720-6382 (TDD). USDA is an equal opportunity provider and employer.

How Soil Surveys Are Made

Soil surveys are made to provide information about the soils and miscellaneous areas in a specific area. They include a description of the soils and miscellaneous areas and their location on the landscape and tables that show soil properties and limitations affecting various uses. Soil scientists observed the steepness, length, and shape of the slopes; the general pattern of drainage; the kinds of crops and native plants; and the kinds of bedrock. They observed and described many soil profiles. A soil profile is the sequence of natural layers, or horizons, in a soil. The profile extends from the surface down into the unconsolidated material in which the soil formed or from the surface down to bedrock. The unconsolidated material is devoid of roots and other living organisms and has not been changed by other biological activity.

Currently, soils are mapped according to the boundaries of major land resource areas (MLRAs). MLRAs are geographically associated land resource units that share common characteristics related to physiography, geology, climate, water resources, soils, biological resources, and land uses (USDA, 2006). Soil survey areas typically consist of parts of one or more MLRA.

The soils and miscellaneous areas in a survey area occur in an orderly pattern that is related to the geology, landforms, relief, climate, and natural vegetation of the area. Each kind of soil and miscellaneous area is associated with a particular kind of landform or with a segment of the landform. By observing the soils and miscellaneous areas in the survey area and relating their position to specific segments of the landform, a soil scientist develops a concept, or model, of how they were formed. Thus, during mapping, this model enables the soil scientist to predict with a considerable degree of accuracy the kind of soil or miscellaneous area at a specific location on the landscape.

Commonly, individual soils on the landscape merge into one another as their characteristics gradually change. To construct an accurate soil map, however, soil scientists must determine the boundaries between the soils. They can observe only a limited number of soil profiles. Nevertheless, these observations, supplemented by an understanding of the soil-vegetation-landscape relationship, are sufficient to verify predictions of the kinds of soil in an area and to determine the boundaries.

Soil scientists recorded the characteristics of the soil profiles that they studied. They noted soil color, texture, size and shape of soil aggregates, kind and amount of rock fragments, distribution of plant roots, reaction, and other features that enable them to identify soils. After describing the soils in the survey area and determining their properties, the soil scientists assigned the soils to taxonomic classes (units). Taxonomic classes are concepts. Each taxonomic class has a set of soil characteristics with precisely defined limits. The classes are used as a basis for comparison to classify soils systematically. Soil taxonomy, the system of taxonomic classification used in the United States, is based mainly on the kind and character of soil properties and the arrangement of horizons within the profile. After the soil

scientists classified and named the soils in the survey area, they compared the individual soils with similar soils in the same taxonomic class in other areas so that they could confirm data and assemble additional data based on experience and research.

The objective of soil mapping is not to delineate pure map unit components; the objective is to separate the landscape into landforms or landform segments that have similar use and management requirements. Each map unit is defined by a unique combination of soil components and/or miscellaneous areas in predictable proportions. Some components may be highly contrasting to the other components of the map unit. The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The delineation of such landforms and landform segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, onsite investigation is needed to define and locate the soils and miscellaneous areas.

Soil scientists make many field observations in the process of producing a soil map. The frequency of observation is dependent upon several factors, including scale of mapping, intensity of mapping, design of map units, complexity of the landscape, and experience of the soil scientist. Observations are made to test and refine the soil-landscape model and predictions and to verify the classification of the soils at specific locations. Once the soil-landscape model is refined, a significantly smaller number of measurements of individual soil properties are made and recorded. These measurements may include field measurements, such as those for color, depth to bedrock, and texture, and laboratory measurements, such as those for content of sand, silt, clay, salt, and other components. Properties of each soil typically vary from one point to another across the landscape.

Observations for map unit components are aggregated to develop ranges of characteristics for the components. The aggregated values are presented. Direct measurements do not exist for every property presented for every map unit component. Values for some properties are estimated from combinations of other properties.

While a soil survey is in progress, samples of some of the soils in the area generally are collected for laboratory analyses and for engineering tests. Soil scientists interpret the data from these analyses and tests as well as the field-observed characteristics and the soil properties to determine the expected behavior of the soils under different uses. Interpretations for all of the soils are field tested through observation of the soils in different uses and under different levels of management. Some interpretations are modified to fit local conditions, and some new interpretations are developed to meet local needs. Data are assembled from other sources, such as research information, production records, and field experience of specialists. For example, data on crop yields under defined levels of management are assembled from farm records and from field or plot experiments on the same kinds of soil.

Predictions about soil behavior are based not only on soil properties but also on such variables as climate and biological activity. Soil conditions are predictable over long periods of time, but they are not predictable from year to year. For example, soil scientists can predict with a fairly high degree of accuracy that a given soil will have a high water table within certain depths in most years, but they cannot predict that a high water table will always be at a specific level in the soil on a specific date.

After soil scientists located and identified the significant natural bodies of soil in the survey area, they drew the boundaries of these bodies on aerial photographs and

identified each as a specific map unit. Aerial photographs show trees, buildings, fields, roads, and rivers, all of which help in locating boundaries accurately.

Soil Map

The soil map section includes the soil map for the defined area of interest, a list of soil map units on the map and extent of each map unit, and cartographic symbols displayed on the map. Also presented are various metadata about data used to produce the map, and a description of each soil map unit.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:15,800.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Dane County, Wisconsin
Survey Area Data: Version 15, Sep 27, 2016

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Aug 16, 2013—Aug 29, 2013

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Map Unit Descriptions

The map units delineated on the detailed soil maps in a soil survey represent the soils or miscellaneous areas in the survey area. The map unit descriptions, along with the maps, can be used to determine the composition and properties of a unit.

A map unit delineation on a soil map represents an area dominated by one or more major kinds of soil or miscellaneous areas. A map unit is identified and named according to the taxonomic classification of the dominant soils. Within a taxonomic class there are precisely defined limits for the properties of the soils. On the landscape, however, the soils are natural phenomena, and they have the characteristic variability of all natural phenomena. Thus, the range of some observed properties may extend beyond the limits defined for a taxonomic class. Areas of soils of a single taxonomic class rarely, if ever, can be mapped without including areas of other taxonomic classes. Consequently, every map unit is made up of the soils or miscellaneous areas for which it is named and some minor components that belong to taxonomic classes other than those of the major soils.

Most minor soils have properties similar to those of the dominant soil or soils in the map unit, and thus they do not affect use and management. These are called noncontrasting, or similar, components. They may or may not be mentioned in a particular map unit description. Other minor components, however, have properties and behavioral characteristics divergent enough to affect use or to require different management. These are called contrasting, or dissimilar, components. They generally are in small areas and could not be mapped separately because of the scale used. Some small areas of strongly contrasting soils or miscellaneous areas are identified by a special symbol on the maps. If included in the database for a given area, the contrasting minor components are identified in the map unit descriptions along with some characteristics of each. A few areas of minor

components may not have been observed, and consequently they are not mentioned in the descriptions, especially where the pattern was so complex that it was impractical to make enough observations to identify all the soils and miscellaneous areas on the landscape.

The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The objective of mapping is not to delineate pure taxonomic classes but rather to separate the landscape into landforms or landform segments that have similar use and management requirements. The delineation of such segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, however, onsite investigation is needed to define and locate the soils and miscellaneous areas.

An identifying symbol precedes the map unit name in the map unit descriptions. Each description includes general facts about the unit and gives important soil properties and qualities.

Soils that have profiles that are almost alike make up a *soil series*. Except for differences in texture of the surface layer, all the soils of a series have major horizons that are similar in composition, thickness, and arrangement.

Soils of one series can differ in texture of the surface layer, slope, stoniness, salinity, degree of erosion, and other characteristics that affect their use. On the basis of such differences, a soil series is divided into *soil phases*. Most of the areas shown on the detailed soil maps are phases of soil series. The name of a soil phase commonly indicates a feature that affects use or management. For example, Alpha silt loam, 0 to 2 percent slopes, is a phase of the Alpha series.

Some map units are made up of two or more major soils or miscellaneous areas. These map units are complexes, associations, or undifferentiated groups.

A *complex* consists of two or more soils or miscellaneous areas in such an intricate pattern or in such small areas that they cannot be shown separately on the maps. The pattern and proportion of the soils or miscellaneous areas are somewhat similar in all areas. Alpha-Beta complex, 0 to 6 percent slopes, is an example.

An *association* is made up of two or more geographically associated soils or miscellaneous areas that are shown as one unit on the maps. Because of present or anticipated uses of the map units in the survey area, it was not considered practical or necessary to map the soils or miscellaneous areas separately. The pattern and relative proportion of the soils or miscellaneous areas are somewhat similar. Alpha-Beta association, 0 to 2 percent slopes, is an example.

An *undifferentiated group* is made up of two or more soils or miscellaneous areas that could be mapped individually but are mapped as one unit because similar interpretations can be made for use and management. The pattern and proportion of the soils or miscellaneous areas in a mapped area are not uniform. An area can be made up of only one of the major soils or miscellaneous areas, or it can be made up of all of them. Alpha and Beta soils, 0 to 2 percent slopes, is an example.

Some surveys include *miscellaneous areas*. Such areas have little or no soil material and support little or no vegetation. Rock outcrop is an example.

Dane County, Wisconsin

Ad—Adrian muck

Map Unit Setting

National map unit symbol: t910
Elevation: 600 to 1,000 feet
Mean annual precipitation: 28 to 33 inches
Mean annual air temperature: 45 to 48 degrees F
Frost-free period: 100 to 150 days
Farmland classification: Not prime farmland

Map Unit Composition

Adrian and similar soils: 100 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Adrian

Setting

Landform: Depressions on stream terraces
Down-slope shape: Concave
Across-slope shape: Concave
Parent material: Organic deposits over sandy alluvium

Typical profile

Oa - 0 to 35 inches: muck
H2 - 35 to 60 inches: sand

Properties and qualities

Slope: 0 to 2 percent
Depth to restrictive feature: More than 80 inches
Natural drainage class: Very poorly drained
Capacity of the most limiting layer to transmit water (Ksat): Moderately low to high (0.14 to 5.95 in/hr)
Depth to water table: About 0 inches
Frequency of flooding: None
Frequency of ponding: None
Calcium carbonate, maximum in profile: 1 percent
Available water storage in profile: Very high (about 15.5 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 3w
Hydrologic Soil Group: A/D
Other vegetative classification: Frequently flooded, organics (G095BY010WI)
Hydric soil rating: Yes

Co—Colwood silt loam, 0 to 2 percent slopes

Map Unit Setting

National map unit symbol: 2tjx2

Elevation: 570 to 1,020 feet
Mean annual precipitation: 31 to 37 inches
Mean annual air temperature: 45 to 48 degrees F
Frost-free period: 110 to 194 days
Farmland classification: Prime farmland if drained

Map Unit Composition

Colwood and similar soils: 85 percent
Minor components: 15 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Colwood

Setting

Landform: Lakebeds (relict)
Landform position (two-dimensional): Toeslope
Landform position (three-dimensional): Interfluve
Down-slope shape: Concave
Across-slope shape: Concave
Parent material: Loamy glaciolacustrine deposits over stratified silt and fine sand glaciolacustrine deposits

Typical profile

Ap - 0 to 10 inches: silt loam
Bg - 10 to 24 inches: sandy clay loam
2Cg - 24 to 79 inches: stratified very fine sand to silt

Properties and qualities

Slope: 0 to 2 percent
Depth to restrictive feature: More than 80 inches
Natural drainage class: Poorly drained
Capacity of the most limiting layer to transmit water (Ksat): Moderately high (0.20 to 0.60 in/hr)
Depth to water table: About 0 inches
Frequency of flooding: None
Frequency of ponding: Frequent
Calcium carbonate, maximum in profile: 20 percent
Salinity, maximum in profile: Nonsaline to very slightly saline (0.0 to 2.0 mmhos/cm)
Available water storage in profile: High (about 10.4 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 2w
Hydrologic Soil Group: C/D
Other vegetative classification: High AWC, high water table (G095BY007WI)
Hydric soil rating: Yes

Minor Components

Pella

Percent of map unit: 8 percent
Landform: Drainageways
Landform position (two-dimensional): Toeslope
Landform position (three-dimensional): Base slope
Down-slope shape: Concave
Across-slope shape: Concave

Hydric soil rating: Yes

Palms

Percent of map unit: 7 percent
Landform: Depressions
Landform position (two-dimensional): Toeslope
Landform position (three-dimensional): Base slope
Down-slope shape: Concave
Across-slope shape: Concave
Hydric soil rating: Yes

DsC2—Dresden silt loam, 6 to 12 percent slopes, eroded

Map Unit Setting

National map unit symbol: 2wspw
Elevation: 750 to 1,180 feet
Mean annual precipitation: 31 to 35 inches
Mean annual air temperature: 45 to 48 degrees F
Frost-free period: 132 to 185 days
Farmland classification: Farmland of statewide importance

Map Unit Composition

Dresden, eroded, and similar soils: 90 percent
Minor components: 10 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Dresden, Eroded

Setting

Landform: Plains
Landform position (three-dimensional): Talf
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Loamy glaciofluvial deposits over calcareous sandy and gravelly outwash

Typical profile

Ap - 0 to 8 inches: silt loam
Bt1 - 8 to 25 inches: clay loam
2Bt2 - 25 to 30 inches: gravelly sandy clay loam
2C - 30 to 79 inches: stratified gravel to coarse sand

Properties and qualities

Slope: 6 to 12 percent
Depth to restrictive feature: 29 to 40 inches to strongly contrasting textural stratification
Natural drainage class: Well drained
Capacity of the most limiting layer to transmit water (Ksat): Moderately high to high (0.60 to 2.00 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: None

Frequency of ponding: None
Calcium carbonate, maximum in profile: 20 percent
Salinity, maximum in profile: Nonsaline to very slightly saline (0.0 to 2.0 mmhos/cm)
Available water storage in profile: Low (about 5.5 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 3e
Hydrologic Soil Group: B
Hydric soil rating: No

Minor Components

Casco, eroded

Percent of map unit: 5 percent
Landform: Moraines
Landform position (two-dimensional): Backslope
Landform position (three-dimensional): Side slope
Down-slope shape: Linear
Across-slope shape: Concave
Hydric soil rating: No

Kegonsa

Percent of map unit: 5 percent
Landform: Plains
Landform position (three-dimensional): Talf
Down-slope shape: Linear
Across-slope shape: Linear
Hydric soil rating: No

GP—Gravel pit

Map Unit Setting

National map unit symbol: 1q9fy
Elevation: 660 to 980 feet
Mean annual precipitation: 30 to 38 inches
Mean annual air temperature: 43 to 48 degrees F
Frost-free period: 150 to 190 days
Farmland classification: Not prime farmland

Map Unit Composition

Pits, gravel: 99 percent
Minor components: 1 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Pits, Gravel

Setting

Parent material: Gravelly outwash

Typical profile

H1 - 0 to 10 inches: stratified extremely gravelly coarse sand to very gravelly sand

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 8s
Other vegetative classification: Not Assigned (other map units) (Noth)
Hydric soil rating: Unranked

Minor Components

Aquents

Percent of map unit: 1 percent
Landform: Depressions
Landform position (three-dimensional): Dip
Hydric soil rating: Yes

GsC2—Grays silt loam, 6 to 12 percent slopes, eroded

Map Unit Setting

National map unit symbol: t92x
Elevation: 580 to 1,360 feet
Mean annual precipitation: 28 to 33 inches
Mean annual air temperature: 46 to 52 degrees F
Frost-free period: 135 to 160 days
Farmland classification: Farmland of statewide importance

Map Unit Composition

Grays and similar soils: 100 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Grays

Setting

Landform: Lake plains
Landform position (three-dimensional): Rise
Down-slope shape: Convex
Across-slope shape: Linear
Parent material: Silty alluvium over stratified silt and fine sand lacustrine deposits

Typical profile

H1 - 0 to 10 inches: silt loam
H2 - 10 to 33 inches: silty clay loam
H3 - 33 to 60 inches: stratified very fine sandy loam to silt loam

Properties and qualities

Slope: 6 to 12 percent
Depth to restrictive feature: More than 80 inches
Natural drainage class: Well drained
Capacity of the most limiting layer to transmit water (Ksat): Moderately high to high (0.57 to 1.98 in/hr)

Depth to water table: More than 80 inches
Frequency of flooding: None
Frequency of ponding: None
Calcium carbonate, maximum in profile: 40 percent
Available water storage in profile: High (about 11.5 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 3e
Hydrologic Soil Group: B
Other vegetative classification: High AWC, adequately drained (G095BY008WI)
Hydric soil rating: No

Ho—Houghton muck

Map Unit Setting

National map unit symbol: t935
Elevation: 600 to 1,000 feet
Mean annual precipitation: 28 to 33 inches
Mean annual air temperature: 45 to 48 degrees F
Frost-free period: 100 to 150 days
Farmland classification: Farmland of statewide importance

Map Unit Composition

Houghton and similar soils: 100 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Houghton

Setting

Landform: Depressions on stream terraces
Down-slope shape: Concave
Across-slope shape: Concave
Parent material: Organic deposits

Typical profile

Oa1 - 0 to 15 inches: muck
Oa2 - 15 to 60 inches: muck

Properties and qualities

Slope: 0 to 2 percent
Depth to restrictive feature: More than 80 inches
Natural drainage class: Very poorly drained
Capacity of the most limiting layer to transmit water (Ksat): Moderately low to high (0.14 to 5.95 in/hr)
Depth to water table: About 0 inches
Frequency of flooding: None
Frequency of ponding: Occasional
Available water storage in profile: Very high (about 23.9 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 3w

Hydrologic Soil Group: A/D
Other vegetative classification: Frequently flooded, organics (G095BY010WI)
Hydric soil rating: Yes

KeB—Kegonsa silt loam, 2 to 6 percent slopes

Map Unit Setting

National map unit symbol: t93f
Mean annual precipitation: 28 to 33 inches
Mean annual air temperature: 46 to 52 degrees F
Frost-free period: 135 to 160 days
Farmland classification: All areas are prime farmland

Map Unit Composition

Kegonsa and similar soils: 100 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Kegonsa

Setting

Landform: Outwash plains
Landform position (three-dimensional): Tread
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Loess over sandy and gravelly outwash

Typical profile

H1 - 0 to 12 inches: silt loam
H2 - 12 to 29 inches: silt loam
H3 - 29 to 33 inches: sandy clay loam
H4 - 33 to 60 inches: gravelly coarse sand

Properties and qualities

Slope: 2 to 6 percent
Depth to restrictive feature: More than 80 inches
Natural drainage class: Well drained
Capacity of the most limiting layer to transmit water (Ksat): Moderately high to high (0.57 to 1.98 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: None
Frequency of ponding: None
Available water storage in profile: Moderate (about 7.7 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 2e
Hydrologic Soil Group: B
Other vegetative classification: High AWC, adequately drained (G095BY008WI)
Hydric soil rating: No

W—Water

Map Unit Setting

National map unit symbol: t95l
Mean annual precipitation: 28 to 33 inches
Mean annual air temperature: 46 to 52 degrees F
Frost-free period: 135 to 160 days
Farmland classification: Not prime farmland

Map Unit Composition

Water greater than 40 acres: 100 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

FEMA Floodplains

NOTES TO USERS

This map is for use in administering the National Flood Insurance Program. It does not necessarily identify all areas subject to flooding, particularly from local drainage sources of small size. The community map repository should be consulted for possible updated or additional flood hazard information.

To obtain more detailed information in areas where Base Flood Elevations (BFEs) and/or floodways have been determined, users are encouraged to consult the Flood Profiles and Floodway Data and/or Summary of Stillwater Elevations tables contained within the Flood Insurance Study (FIS) Report that accompanies this FIRM. Users should be aware that BFEs shown on the FIRM represent rounded whole-foot elevations. These BFEs are intended for flood insurance rating purposes only and should not be used as the sole source of flood elevation information. Accordingly, flood elevation data presented in the FIS Report should be utilized in conjunction with the FIRM for purposes of construction and/or floodplain management.

Coastal Base Flood Elevations shown on this map apply only landward of 0.0' North American Vertical Datum of 1988 (NAVD 88). Users of this FIRM should be aware that coastal flood elevations are also provided in the Summary of Stillwater Elevations table in the Flood Insurance Study Report for this jurisdiction. Elevations shown in the Summary of Stillwater Elevations table should be used for construction and/or floodplain management purposes when they are higher than the elevations shown on this FIRM.

Boundaries of the floodways were computed at cross sections and interpolated between cross sections. The floodways were based on hydraulic considerations with respect to requirements of the National Flood Insurance Program. Floodway widths and other pertinent floodway data are provided in the Flood Insurance Study Report for this jurisdiction.

Certain areas not in Special Flood Hazard Areas may be protected by flood control structures. Refer to Section 2.4 "Flood Protection Measures" of the Flood Insurance Study Report for information on flood control structures for this jurisdiction.

The projection used in the preparation of this map was Universal Transverse Mercator (UTM) zone 16. The horizontal datum was NAD 83, GRS 1980 spheroid. Differences in datum, spheroid, projection or UTM zones used in the production of FIRMs for adjacent jurisdictions may result in slight positional differences in map features across jurisdiction boundaries. These differences do not affect the accuracy of this FIRM.

Flood elevations on this map are referenced to the North American Vertical Datum of 1988. These flood elevations must be compared to structure and ground elevations referenced to the same vertical datum. For information regarding conversion between the National Geodetic Vertical Datum of 1929 and the North American Vertical Datum of 1988, visit the National Geodetic Survey website at http://www.ngs.noaa.gov or contact the National Geodetic Survey at the following address:

NGS Information Services
NOAA, NNGS13
National Geodetic Survey
SSMC3, #9202
1315 East-West Highway
Silver Spring, Maryland 20910-3282
(301) 713-3242

To obtain current elevation, description, and/or location information for bench marks shown on this map, please contact the Information Services Branch of the National Geodetic Survey at (301) 713-3242, or visit its website at http://www.ngs.noaa.gov.

Base map information shown on this FIRM was provided by the Wisconsin Regional Orthophotography Consortium (WROC). The aerial photography was acquired in the spring of 2010 to create 1":1000' scale digital orthophotos with 1ft-inch resolution.

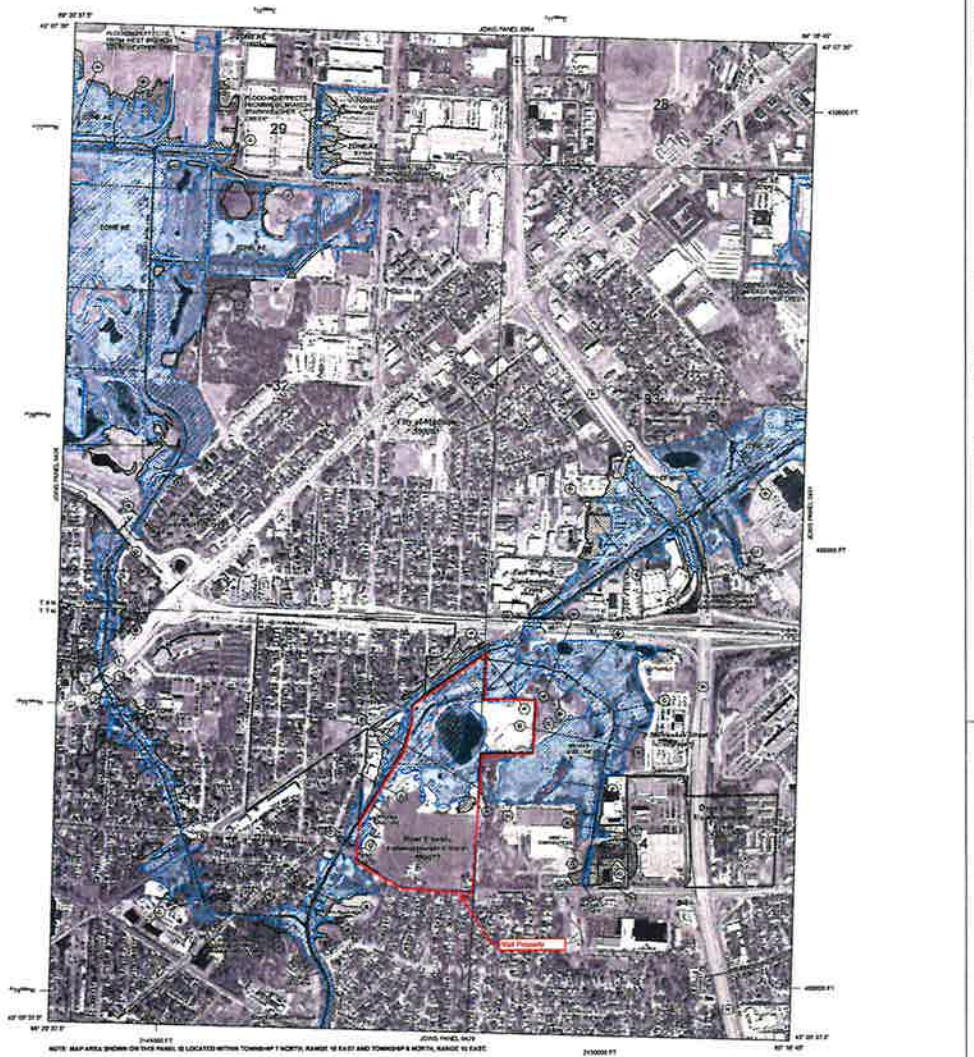
The profile baselines depicted on this map represent the hydraulic modeling baselines that match the flood profiles in the FIS report. As a result of improved topographic data, the profile baseline, in some cases, may deviate significantly from the channel centerline or appear outside the SFHA.

Corporate limits shown on this map are based on the best data available at the time of publication. Because changes due to annexations or de-annexations may have occurred after this map was published, map users should contact appropriate community officials to verify current corporate limit locations.

Please refer to the separately printed Map Index for an overview map of the county showing the layout of map panels; community map repository addresses; and a Listing of Communities table containing National Flood Insurance Program dates for each community as well as a listing of the panels on which each community is located.

For information on available products associated with this FIRM, visit the Map Service Center (MSC) website at http://msc.fema.gov. Available products may include previously issued Letters of Map Change, a Flood Insurance Study Report, and/or digital versions of this map. Many of these products can be ordered or obtained directly from the MSC website.

If you have questions about this map, how to order products, or the National Flood Insurance Program in general, please call the FEMA Map Information eXchange (FMIX) at 1-877-FEMA MAP (1-877-336-2627) or visit the FEMA website at http://www.fema.gov/business/nfip.



LEGEND

SPECIAL FLOOD HAZARD AREAS (SFHAs) SUBJECT TO INUNDATION BY THE 1% ANNUAL CHANCE FLOOD

The 1% annual chance flood (100-year flood), also known as the base flood, is the flood that has a 1% chance of being equaled or exceeded in any given year. The Special Flood Hazard Area is the area subject to flooding by the 1% annual chance flood. Areas of Special Flood Hazard include Zones A, AE, AH, AO, AR, A99, V, and VE. The Base Flood Elevation is the water surface elevation of the 1% annual chance flood.

ZONE A — No Base Flood Elevations determined.

ZONE AE — Base Flood Elevations determined.

ZONE AH — Flood depths of 1 to 3 feet (usually areas of ponding); Base Flood Elevations determined.

ZONE AO — Flood depths of 1 to 3 feet (usually sheet flow on sloping terrain); average depths determined. For areas of alluvial fan flooding, velocities also determined.

ZONE AR — Special Flood Hazard Area formerly protected from the 1% annual chance flood by a flood control system that was subsequently decertified. Zone AR indicates that the former flood control system is being restored to provide protection from the 1% annual chance or greater flood.

ZONE A99 — Area to be protected from 1% annual chance flood by a Federal flood protection system under construction; no Base Flood Elevations determined.

ZONE V — Coastal flood zone with velocity hazard (wave action); no Base Flood Elevations determined.

ZONE VE — Coastal flood zone with velocity hazard (wave action); Base Flood Elevations determined.

FLOODWAY AREAS IN ZONE AE

The floodway is the channel of a stream plus any adjacent floodplain areas that must be kept free of encroachment so that the 1% annual chance flood can be carried without substantial increases in flood heights.

OTHER FLOOD AREAS

ZONE X — Areas of 0.2% annual chance flood; areas of 1% annual chance flood with average depths of less than 1 foot or with drainage areas less than 1 square mile; and areas protected by levees from 1% annual chance flood.

OTHER AREAS

ZONE X — Areas determined to be outside the 0.2% annual chance floodplain.

ZONE D — Areas in which flood hazards are undetermined, but possible.

COASTAL BARRIER RESOURCE SYSTEM (CBRS) AREAS

OTHERWISE PROTECTED AREAS (OPAs)

CBRS areas and OPAs are typically shown with a dotted or dash-shot boundary.

Endangered Species

WISCONSIN
DEPT. OF NATURAL RESOURCES

Endangered Resources Preliminary Assessment

Created on **6/22/2017.** This report is good for one year after the created date.

Results

Endangered resources are present and the species present are legally protected. **Further actions are required to ensure compliance** with Wisconsin's Endangered Species Law (s. 29.604 Wis. Stats.) and the Federal Endangered Species Act (16 USC ss 1531-43). Therefore you should request an Endangered Resources Review http://dnr.wi.gov/topic/ERReview/Review.html.

User Questionnaire[1]
Phase I Environmental Site Assessment
Voit Farm Property, 3420-3510 Milwaukee Street, Madison, WI 53704
February 18, 2022
SCS Engineers File No. 25222051.00

User:	*Environmental Professional:*
Starkweather, LLC. 1010 East Washington Avenue Madison, Wisconsin 53703	SCS Engineers 2830 Dairy Drive, Madison, WI 53718

In reference to Section 6. User's Responsibilities, of ASTM E1527-21 Standard Practice for Environmental Site Assessments: Phase 1 Environmental Site Assessment Process, the Environmental Professional (SCS Engineers) is required to inquire with the user (Client) regarding their knowledge or possession of information that may assist in identifying recognized environmental conditions (RECs) pertaining to the Subject Property.

In order to qualify for one of the Landowner Liability Protections (LLPs) offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the "Brownfields Amendments"), the user must conduct the following inquiries required by 40 CFR 312.25, 312.28, 312.29, 312.30, and 312.31. These inquiries must also be conducted by or on behalf of USEPA Brownfield Assessment and Characterization grantees. The user should provide the following information to the Environmental Professional. Failure to conduct these inquiries could result in a determination that "all appropriate inquiries" is not complete.

(1) **Environmental Cleanup Liens (40 CFR 312.25).** Did a search of recorded land title records (or judicial records where appropriate) identify any environmental liens filed or recorded against the Subject Property under federal, tribal, state or local law?
☐ Yes ☒ No

If Yes, explain and/or provide information:

(2) **Activity and Use Limitations (AULs) (40 CFR 312.26(a)(1)(v) and (vi)).** Did a search of recorded land title records (or judicial records, where appropriate) identify any AULs such as engineering controls, land use restrictions, or institutional controls that are in place at the Subject Property and/or have been filed or recorded against the Subject Property under federal, tribal, state or local law?
☐ Yes ☒ No

If Yes, explain and/or provide information:

[1] The document is designed to comply with Appendix X3, User Questionnaire, of ASTM E1527-21, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process, and the USEPA AAI regulations (40 CFR §312).

(3) Specialized Knowledge or Experience (40 CFR 312.28). Do you have any specialized knowledge or experience related to the Subject Property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the Subject Property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

☐ Yes ☒ No

If Yes, explain and/or provide information:

(4) Purchase Price vs. Fair Market Value (40 CFR 312.29). Does the purchase price being paid for the Subject Property reasonably reflect the fair market value of the Subject Property?

☒ Yes ☐ No

If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the Subject Property?

☐ Yes ☐ No

If Yes, explain and/or provide information:

(5) Commonly Known or Reasonably Ascertainable Information (40 CFR 312.30). Are you aware of commonly known or reasonably ascertainable information about the Subject Property that would help the Environmental Professional to identify conditions indicative of releases or threatened releases?

For example,

(a) Do you know the past use of the Subject Property?
(b) Do you know specific chemicals that are present or once were present at the Subject Property?
(c) Do you know of spills or other chemical releases that have taken place at the Subject Property?
(d) Do you know of any environmental cleanups that have taken place at the Subject Property?

☒ Yes ☐ No to all

If Yes, explain and/or provide information:

(a) Uses: ready mix concrete plant, farm
(b) Only aware of information provided in Phase I and Phase II reports completed by SCS

(6) Obvious Indications of Contamination (40 CFR 312.31). Based on your knowledge and experience related to the Subject Property are there any obvious indicators that point to the presence or likely presence of contamination of the Subject Property?

☐ Yes ☒ No

If Yes, explain and/or provide information:

Subject: Phase 1 Environmental Site Assessment Report
E C Voit & Sons and Voit Land LLC Property
3450 Milwaukee Street
Town of Blooming Grove, Dane County, Wisconsin

Dear Ms. Bemis:

SCS Engineers (SCS) completed a Phase 1 Environmental Site Assessment (ESA) for the E C Voit & Sons property and part of the Voit Land LLC property located at 3450 Milwaukee Street in the Town of Blooming Grove, Dane County, Wisconsin. A copy of the Phase 1 ESA Report is attached.

SCS appreciates the opportunity to perform this environmental assessment. Please call us at (608) 224-2830 with any questions regarding the Phase 1 ESA Report.

Sincerely,

Lisa Brickson
Project Scientist

EXECUTIVE SUMMARY

SCS Engineers (SCS) performed a Phase 1 Environmental Site Assessment (ESA) consistent with the Environmental Protection Agency (EPA) Standards and Practices for All Appropriate Inquiries (AAI) as set forth in 40 CFR, Part 312 and the ASTM International (ASTM) Standard E1527-13 on one parcel of land owned by E C Voit & Sons and part of a parcel of land owned by Voit Land LLC located at 3450 Milwaukee Street, Town of Blooming Grove, Dane County, Wisconsin, hereafter referred to as the Property.

The Property includes approximately 30 acres of vacant land that was developed for surface mining sand and gravel by at least the 1930s. It is part of a larger piece of land that has been owned, managed, and occupied by the Voit family for approximately 150 years. It was originally operated as a family farm. An eastern portion of the larger Voit family land was sold to Mautz Paint in the 1950s and later sold to the City of Madison. Part of the Voit family land located west of the Property is being sold on a land contract.

The Voit family opened a ready mix concrete facility located south of the Property in the 1940s. The E C Voit & Sons Ready Mix facility originally used sand and gravel from the Property. The facility is still in operation.

Surface mining on the Voit family land ended approximately 45 to 50 years ago. Dredging of sand and gravel from the two ponds continued into the mid-1980s to early 1990s.

In 2006, the Wisconsin Department of Natural Resources (WDNR) granted permission to fill a pond that was located on the 8-acre Property parcel. According to Tom Voit, representing the Property owner, the fill material came from road construction projects in the city. No analytical testing or records were provided related to the fill material used to fill the pond.

The purpose of this Phase 1 ESA is to identify, to the extent practicable, recognized environmental conditions (RECs) in connection with the Property. In order to accomplish this, an historical review, and an inspection of the Property were performed.

This assessment has revealed no evidence of RECs in connection with the Property except for the following:

1. Surface mining for sand and gravel began on Property by the 1930s, and the last of the sand and gravel was dredged from the ponds in the mid-1980s to early 1990s. Regulations for the disposal of hazardous waste and procedures for enforcing the regulations were enacted during the 1970s and 1980s. Prior to that time, it was common practice for waste materials to be disposed on low-lying land, such as wetlands, quarries and gravel pits. Historical disposal of potentially contaminated material on the Property was not reported by Mr. Voit and documentation was not encountered during the assessment. If potentially contaminated material had been historically disposed, it appears it was not done with WDNR oversight and it would have likely been put out of the way of current and future surface mining activity. Based on the topography and the aerial photographs, one area of historical disposal may have been the low-lying land near

Starkweather Creek. Another area may have been the south and southeast sides of the filled pond. Mounds of soil containing some rock were observed on the Property during the site visit. The soil mounds had trees growing through them of a size indicating the mounds have been there for many years. The largest mounds were on the south and southeast slopes between the filled area on the 8-acre Property parcel and the adjoining City of Madison property. Other soil mounds were observed on the low-lying land on the northwest part of the Property near Starkweather Creek. The ground surface on the low-lying land was very uneven with significant undulations covered with tall vegetation. The presence of the old soil mounds from an unknown source in a historically surface-mined area is identified as a REC for the Property.

2. A pond on the 8-acre Property parcel was filled with WDNR permission starting in 2006. The fill material was from road construction projects. The area is now the highest land on the Property. Documentation for the fill material was not obtained.

   The Voit family sold the adjoining property to the east to Mautz Paint in the 1950s. Aerial photographs from the 1960s and 1970s show unimproved roads extending from the Property's gravel pits onto the Mautz Paint property. Small unidentified circular objects are visible near an intermittent stream/drainage ditch to the east. Unimproved roads into a remote undeveloped area can be the result of numerous activities including recreation, in this case building site considerations, and disposal. The City of Madison subsequently purchased the adjoining land.

   In 2017, the City of Madison installed four groundwater monitoring wells on their adjoining land around the 8-acre Property parcel. The shallow water table wells were sampled four times between October 2017 and January 2018. The groundwater flows generally from the northeast toward the southwest, toward Starkweather Creek. Arsenic was detected in MW1 at a concentration greater than the NR 140 enforcement standard (ES). Nickel was detected in MW1 and MW2 at concentrations greater than the NR 140 preventive action limit (PAL) and less than the ES. Tetrachloroethene was detected in one well, MW4, at concentrations greater than the PAL and less than the ES. The results were reported to the WDNR. The WDNR response was that no further action is required at that time.

   The detection of contaminants in the groundwater near the Property, historical unimproved roads and unidentified objects on the adjoining property, the presence of old soil mounds on the 8-acre parcel, and the lack of documentation for fill material on the 8-acre Property parcel are identified as a REC for the Property.

1.0 INTRODUCTION

1.1 PURPOSE

The purpose of this Phase 1 ESA is to identify, to the extent practicable, RECs in connection with the Property in accordance with ASTM E 1527-13. ASTM E 1527-13, section 1.1.1, defines a REC as *"[T]he presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: 1) due to any release to the environment; 2) under conditions indicative of a release to the environment; or 3) under conditions that pose a material threat of a future release to the environment. De minimis conditions[1] are not recognized environmental conditions."*

In addition, this investigation may identify historical RECs (HRECs) and controlled RECs (CRECs) at the Property. An HREC is defined in ASTM E 1527-13, section 3.2.42 as *"a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls."*

A CREC is defined in ASTM E 1527-13, section 3.2.18 as "*a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls)."*

In using the ASTM E1527-13 standard, the term "release" of hazardous substances or petroleum products to the environment has the same meaning as the definition of a "release" under Comprehensive Environmental Response Compensation and Liability Act (CERCLA). Additionally, the terms "migrate" and "migration" refer to the movement of hazardous substances or petroleum products in any form, including, for example, solid and liquid at the surface or subsurface, and vapor in the subsurface.

[1] As defined in ASTM E 1527-13, section 3.2.22 - "A condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies."

1.2 REASONS FOR PERFORMING PHASE 1

This ASTM E 1527-13 Phase 1 ESA is being performed to satisfy due diligence requirements and to meet the AAI provisions necessary to qualify for certain landowner liability protections under the CERCLA.

1.3 SCOPE OF SERVICES

Consistent with the ASTM E 1527-13 Standard, SCS:

- Reviewed reasonably ascertainable environmental and historical records, based on their availability and our professional discretion. Records include the following:
  - Standard federal, tribal, and state inventories of contaminated sites within minimum search distances from the Property;
  - Physical setting sources including U.S. Geological Survey (USGS) topographic maps and Soil Conservation Survey soils maps;
  - Standard sources of historical information including aerial photographs, fire insurance maps, USGS topographic maps, property tax files, assessor's office files, street directories, building department records, zoning/land use records, and other sources (newspapers, internet sites, local libraries, interviews, etc.).
- Conducted a site visit inspecting the land and structures located on the Property, and observing the adjoining properties to the extent that they can be seen from the Property or public property. Current and past uses of the Property and surrounding area are considered, and the primary features of the Property noted. Observations focus on evidence of spills, leaks, chemical storage, stressed vegetation, and other indications that hazardous substances or petroleum products may have been released.
- Interviewed individuals likely to have information regarding the potential for contamination at the Property. Individuals interviewed may include local government officials, past or current owners, operators or occupants, and the key site manager.
- Reviewed information and documents provided by the User related to the Property.
- Reviewed the responses to the User[1] Questionnaire provided by SCS.
- Reviewed regulatory files associated with the listing of the Property, or adjoining properties, on any of the standard environmental record sources indicating contamination. The purpose of the regulatory file review is to obtain sufficient information to determine if a REC exists on the Property in connection with the listing. A full regulatory file review was not performed.

[1] As defined in ASTM E 1527-13, section 3.2.98 – "The party seeking to use Practice E1527 to complete an environmental assessment of the Property…"

1.4 SIGNIFICANT ASSUMPTIONS

SCS assumes that information collected during the Phase 1 ESA is accurate and correct unless it is obviously inaccurate or if information exists to the contrary.

1.5 LIMITATIONS AND EXCEPTIONS

Conclusions in this report represent our professional judgment and are limited to those site conditions and potential impacts from neighboring properties that could be discovered under the scope of services authorized by the proposal. The conclusions presented were based on an inspection of the property, interviews, and a review of relevant records.

The conclusions and interpretations of this report do not collectively define all the risks associated with purchase or other use of the Property. Should you, our client, or other interested parties, wish to further reduce the risks associated with undiscovered or unquantified environmental impacts, you may want to consider having additional assessment activities performed such as collecting and analyzing soil, groundwater, or other appropriate samples for compounds of relevant and particular concern, or complete other investigation activities as appropriate.

The assessment was prepared in accordance with the generally accepted industry standards at the time the work was performed. No other warranty is expressed or implied.

1.6 USER RELIANCE

This report is presented for use by our client, City of Madison Engineering Division (User). The report is not to be used by or relied upon by others who have not entered into a contract with SCS for these services.

1.7 SPECIAL TERMS AND CONDITIONS

No part of this document may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopy, recording, or any information storage and retrieval system, without written permission from SCS.

2.0 PROPERTY DESCRIPTION

2.1 PROPERTY OWNER, MANAGER, AND OCCUPANT

E C Voit & Sons and Voit Land LLC own and manage the Property parcels. The Voit family historically used the Property for a sand and gravel pit.

2.2 PROPERTY LOCATION

The Property is located in a residential / commercial / industrial area on the northeast side of Madison, Wisconsin (**Figure 1**). The Property is located in a part of the Town of Blooming Grove that is surrounded by City of Madison properties (**Figure 2**). The Town of Blooming Grove will be annexed into the City of Madison by 2027.

2.3 PROPERTY LEGAL DESCRIPTION AND FEATURES

The Property is located in Section 4 and Section 5, Township 7 North, Range 10 East, Town of Blooming Grove, Dane County, Wisconsin.

The Property contains approximately 30 acres of land. It includes all of the E C Voit & Sons 8.0-acre parcel, and part of the Voit Land LLC 56.3-acre parcel. A map that shows the two parcels is included as **Figure 3**. The tax parcel records are included in **Appendix A**. The parcels are described below. A map that shows the approximate borders of the Property is included as **Figure 4**.

Owner Name	Address	Tax Parcel Number	Notes
E C Voit & Sons	No address assigned	008/0710-042-8680-7	An 8.0-acre parcel of vacant land that was surface-mined for sand and gravel. A pond that was created by the mining was filled starting in 2006.
Voit Land LLC	3450 Milwaukee Street	008/0710-051-8251-0	The approximately 22-acre Property portion includes the north part of the parcel with access to Milwaukee Street along the east side of the parcel. The north part includes Starkweather Creek, vacant land that was surface-mined for sand and gravel, and a pond.

2.4 PROPERTY CURRENT AND HISTORICAL USE

2.4.1 Interview with Tom Voit and User-Provided Records

The Property is part of a larger piece of land that was owned, managed, and occupied by the Voit Family for several generations. During the June 6, 2018 site visit, Mr. Tom Voit of E C Voit & Sons Ready Mix told Ms. Lisa Brickson of SCS that his family purchased the land approximately 150 years ago. It was originally operated as a family farm.

Mr. Voit said that the Voit family land originally extended along the south side of US Highway 30 to US Highway 51. It also included the land where the Post Office was constructed at the intersection of Milwaukee Street and US Highway 51. He said that in the 1950s, his grandfather sold part of the Voit family land that adjoined the 8.0-acre Property parcel to Mautz Paint. The

Voit family also owned the adjoining property to the west at 219 North Fair Oaks Avenue, across Starkweather Creek. The parcel is currently being sold on a land contract.

By at least the 1930s, the northwestern part of the Property was being surface-mined for sand and gravel. In the 1940s, the family built their ready mix concrete facilities on the southwestern part of the Voit Land LLC parcel near Milwaukee Street. Mr. Voit said that by 1948 the facility was using sand and gravel from the Property gravel pit. He said his grandfather derived the E C Voit & Sons Ready Mix business name from his own name, Erhardt Christian Voit.

Mr. Voit said that around 1957, a railroad spur was extended from the railroad tracks that border the northwest side of the Property to the northwest corner of the surface mining area. The spur allowed Portland cement for the Ready Mix facility to be delivered in rail cars. Culverts were constructed so the rail spur could cross over Starkweather Creek. The Portland cement was hauled by truck to a silo at the Ready Mix facility. The culverts and remnants of the spur are still present. Portland cement is currently delivered by truck.

Mr. Voit said that he was involved with some farming and other family activities when he was growing up. He became officially involved in the Ready Mix operations around 1986 when he started working there for his father and two uncles who are now deceased. The Ready Mix facility is still in operation, and the family land located east of the facility is used for agricultural crop production.

Mr. Voit said that surface mining on the Voit family land ended approximately 45 to 50 years ago. The surface mining activity had resulted in the formation of two ponds on the Property, and Mr. Voit said they continued to dredge sand and gravel from the ponds into the mid-1980s to early 1990s. He said that the pond closest to Starkweather Creek is about 50 feet at the deepest, is spring-fed, and was stocked with fish.

Mr. Voit said that in 2006, they got permission from the WDNR to fill the second pond that was located on the 8.0-acre Property parcel. He said the filling activity started in 2006 and that the fill material came from road construction projects in the city. The filled area currently has the highest ground elevation on the Property. Ms. Brickson asked if there were any records documenting the material that was used to fill the pond that could be provided to the city and/or included in the Phase 1 ESA Report. Mr. Voit did not respond, and did not provide any records of sources or analytical testing. Mr. Voit said that he did not believe that any waste material from households, businesses, industries, or municipalities had ever been disposed on the Voit family land.

The User provided a WDNR record showing that Arthur Voit (Tom Voit's father) met with the WDNR and a Dane County Zoning inspector on May 13, 2005 to discuss how the two gravel pit ponds pertained to State statutes and/or local ordinances (**Appendix A**). The WDNR issued a letter dated May 19, 2005, stating that Pond #2 (on the 8.0-acre Property parcel) was not connected to Pond #1 or to Starkweather Creek so filling the pond was not within the Department's jurisdiction as it pertained to Chapter 30, Wisconsin Statutes. The letter said that filling the pond could continue as long as other State and local requirements were met.

The User installed four groundwater monitoring wells on city-owned land near the 8.0-acre Property parcel in 2017. The shallow water table wells were sampled by the City on four dates between October 2017 and January 2018. The City of Madison Engineering Division provided the results to Mr. Voit in a letter dated February 9, 2018. The User provided a copy to SCS (**Appendix A**). A figure attached to the letter shows the monitoring well locations, near the four corners of the 8-acre property. The letter states that groundwater flows generally from the northeast toward the southwest, toward Starkweather Creek. The City provided a table that summarized the analytical results for detected metals, and volatile organic compounds (VOCs). Additional testing was reportedly completed for polycyclic aromatic hydrocarbons (PAHs) without detections.

Arsenic was detected in MW1 at a concentration greater than the NR 140 ES. Nickel was detected in MW1 and MW2 at concentrations greater than the PAL and less than the ES. Tetrachloroethene was detected in one well, MW4, at concentrations greater than the PAL and less than the ES. The results were reported to the WDNR. The WDNR response required no further action at that time.

The letter states that it is common practice for the city to perform Phase 1 ESA and Phase 2 ESA assessments when purchasing a commercial or industrial property and it is common for low-level or "incidental" contamination to be detected in non-residential property. The City requested to perform a Phase 1 ESA and likely a Phase 2 ESA on the Property at the City's expense.

2.4.2 Interview with Tom Voit and Historical Aerial Photographs

Environmental Risk Information Services (ERIS) provided historical aerial photographs (**Appendix B**) that provide additional information about the Voit family land that is consistent with the history provided by Mr. Voit.

- **1937 and 1953 Aerials:** Disturbed ground and unimproved roads associated with surface mining are seen in the northwest part of the Property, and a small pond is visible. The southeast part of the Property was in agricultural use. An unimproved road connects the area with Milwaukee Street to the south. Ground disturbance is visible where the current Ready Mix facility is located.

- **1957 Aerial:** Starkweather Creek has been re-routed from its more southern location to the northwest border of the Property along the railroad corridor. Mr. Voit said he didn't know who was involved with re-routing the creek. Surface mining has expanded and the pond is larger. A linear feature that may be the railroad spur extends from the surface mining area across Starkweather Creek to the railroad corridor near the north tip of the Property. Mr. Voit said that trucks hauled the Portland cement to a silo at the Ready Mix facility where it was unloaded into a hopper and mechanically transferred to the top of the silo. Structures are visible in the Ready Mix facility area. An unimproved road connects the Voit family farmstead with the Ready Mix facility.

- **1969, 1974, and 1980 Aerials:** Surface mining had expanded onto the 8.0-acre Property parcel where the second pond was present. The 1969 aerial shows disturbed ground on the adjoining property to the east near the border with the 8.0-acre Property parcel. Currently there are vegetated soil berms in that area. The 1974 aerial shows an unimproved road leading from surface mining areas on the Property, across the adjoining property to the east (now owned by the City) where there is currently a grassy wetland, toward a drainage ditch/intermittent stream. There are light-colored circular features at the end of the road. The road is not apparent in the 1980 aerial but the circular objects are still visible. Mr. Voit said his grandfather sold the adjoining land to Mautz Paint in the 1950s. It was his understanding that Mautz Paint had planned to construct a building there. He said he had no knowledge of the unimproved road or objects on the adjoining land to the east.

- **1987, 1993, 2004, and 2005 Aerials:** Surface mining on the Property parcels appears to be reduced. Disturbed ground around the pond on the 8-acre Property parcel may reflect the last dredging of sand and gravel.

- **2006 and 2008 Aerials:** The pond on the 8.0-acre Property parcel is being filled.

- **2010 Aerial:** The ground surface on the filled pond has irregularities and objects may be present. Mr. Voit said that Speedway Sand & Gravel had used the area to store and crush concrete for re-use. He said that no other companies had used land on the Property for such activities.

- **2013, 2015, and 2017 Aerials:** The Property parcels become more vegetated, likely indicating reduced activity. The conditions on the 2017 aerial are similar to those seen during the June 6, 2018, site visit.

SCS obtained additional historical aerial photographs from 1955 to 2014 from the Access Dane website. The historical aerials are shown with the current tax parcel property lines. SCS enlarged the aerial photographs, focusing on the northern part of the Property. The Access Dane aerials are included in **Appendix B**.

In general, the Access Dane aerials are consistent with the ERIS aerials. Additional details were visible on the following aerials:

- **1955-1957:** After Starkweather Creek was re-routed to its current location, fill material was placed on the adjoining land to the west at 219 North Fair Oaks Avenue that had not yet been developed. The Voit family likely owned the adjoining property at that time. The 1955 aerial shows an unimproved road that crossed the creek between the Voit Land LLC parcel and 219 North Fair Oaks Avenue.

- **1976:** Two unimproved roads from the surface mining areas on the Property extend onto the adjoining property to the east where a more circular road is visible.

- **1995-2000:** A multi-directional unimproved road is seen on the adjoining land to the east. Mr. Voit said that it was a moto-cross trail that was created by neighborhood youth. Remnants of the trail are still visible in in the 2000 aerial.

2.5 ADJOINING PROPERTIES

The following table summarizes observations of the adjoining properties that were made during the Property inspection. An adjoining property is defined in ASTM E 1527-13, section 3.2.4, as any property or properties, the border of which is contiguous or partially contiguous with that of the Property, but for a street, road, or other thoroughfare separating them. Some adjoining and nearby properties are shown on **Figure 5**.

Summary of Observations on Adjoining Properties		
Direction	**Land Use**	**Comments**
Northwest	The railroad corridor borders the far northwest side of the Property followed by primarily residential properties. South of the railroad corridor, Starkweather Creek borders the Property followed by commercial and/or industrial properties at 219, and 251 North Fair Oaks Avenue. The small parcel at 231 North Fair Oaks is between the two listed above and does not adjoin the Property. It is a nearby property.	No obvious indications of the use, storage, or generation of hazardous materials/wastes or petroleum products were observed. East Side Services at 219 North Fair Oaks Ave is an auto repair business and likely has petroleum products and/or hazardous substances. TC Carpet Care at 231 North Fair Oaks Ave, and Stock-N-Lock storage facility at 251 N. Fair Oaks are less likely to have petroleum products and hazardous substances. The industrial and commercial businesses on the adjoining properties are not identified as a REC for the Property due to the distance between them and the presence of Starkweather on the property line.
Northeast, East, and Southeast	The City of Madison owns the adjoining parcels to the east. The parcels are vacant and are primarily grassy wetlands.	No obvious indications of the use, storage, or generation of hazardous materials/wastes or petroleum products were observed.
South	The remainder of the Voit Land LLC parcel with the Ready Mix facility, agricultural land, and former Voit family farmstead adjoins the Property to the south.	Two 1,000-gallon diesel aboveground storage tanks (ASTs) with secondary containment are located on the Ready Mix facility. One AST is near the west side of the Portland cement silo. Mr. Voit said that it is no longer in use. The second AST is east of the office building, across the driveway, near the agricultural land.

2.6 UNITED STATES GEOLOGIC SURVEY TOPOGRAPHIC MAP

A review of the 2015 USGS Madison East, Wisconsin Quadrangle topographic map (**Figure 1**) reveals the highest elevation on the Property is approximately 850 feet above mean sea level. The 1906 topographic map (**Appendix B**) shows the highest elevation was approximately 880 feet above mean sea level. The 1959 to 1983 topographic map (**Appendix B**) shows gravel pits on the Property.

The historical use of the Property for surface mining, unimproved roads for heavy equipment, and filling created an unnatural and constantly changing landscape with significant variations in the topography.

Starkweather Creek borders the northwest side of the Property and discharges into Lake Monona. The south end of the Property is approximately 3,500 feet northeast of Lake Monona.

SCS assumes that the flow direction of shallow groundwater is approximately the same as the slope of the pre-developed surface topography. Based on the topographic map, shallow groundwater flow in the vicinity of the Property is estimated to be toward Starkweather Creek or Lake Monona to the southwest, consistent with the groundwater information provided by the City to Tom Voit. The estimated depth to shallow groundwater on the Property would vary significantly depending on the location but is estimated to be approximately 5 to 10 feet below ground surface near Starkweather Creek.

2.7 BEDROCK GEOLOGY

The ERIS Physical Settings Report (**Appendix D**) describes bedrock in the vicinity of the Property as Cambrian, undivided, with sandstone and some dolomite and shale (ERIS, 2018).

2.8 SOIL CONSERVATION SERVICE MAP

The ERIS Physical Settings Report (**Appendix D**) includes a Soil Conservation Service map for the Property area, with soil descriptions (ERIS, 2018). Soil in the vicinity of the Property is mapped as:

- Dresden silt loam with a 6 to 12 percent slope, eroded. The soils are well drained and have moderately low runoff potential when thoroughly wet.
- Gravel Pit with stratified gravelly coarse sand to gravelly sand.
- Water (in the gravel pit ponds).

3.0 USER-PROVIDED INFORMATION

The Environmental Protection Agency Standards and Practices for All Appropriate Inquiries as set forth in 40 CFR, Part 312 and the ASTM International Standard E1527-13 require that the User provide the following information to the environmental professional. Ms. Brynn Bemis, City of Madison hydrogeologist, completed the User Questionnaire on June 12, 2018. A copy of the questionnaire is included in **Appendix A**.

The following table summarizes the responses by the Client

Question	Response		
Are you aware of environmental cleanup liens filed or recorded against the Property under federal, state, or local law?	Yes ☐	No ☒	NA ☐
Are you aware of activity or land use limitations that are in place on the Property, or that have they been filed or recorded in the registry?	Yes ☐	No ☒	NA ☐
Does you have specialized knowledge or experience related to the Property or nearby properties?	Yes ☐	No ☒	NA ☐
Does the purchase price being paid for the Property reasonably reflect the fair market value of the Property?	Yes ☒	No ☐	NA ☐
Are you aware of any commonly known or reasonably ascertainable information about the Property that would help the environmental professional to identify conditions indicative of a release or threatened release? *Note: The User noted that from aerials they can see it was used for nonmetallic mining and as a concrete batch plant.*	Yes ☒	No ☐	NA ☐
Are there any obvious indications that point to the presence or likely presence of contamination at the Property? *Note: The User noted that they installed and sampled 4 water table monitoring wells just outside the property that indicate some low-level solvent contamination. It is not clear if this property is the source, but contaminated materials may have been used to fill in the second pond on the property. These data have already been provided to SCS.*	Yes ☒	No ☐	NA ☐

NA = Not Applicable

The User will perform a title search prior to the potential purchase of the Property, so an environmental lien search was not obtained.

4.0 ENVIRONMENTAL RECORDS REVIEW

4.1 WISCONSIN DEPARTMENT OF NATURAL RESOURCES WEBSITE

SCS reviewed the Wisconsin Department of Natural Resources (WDNR) website for locations of properties that are contaminated or have been contaminated with hazardous substances. A copy of the WDNR Contaminated and Cleaned Up Sites Map is included on **Figure 6**.

The Property was not identified by the WDNR as a site on the Contaminated and Cleaned Up Sites Map, **Figure 6**.

No adjoining properties were identified by the WDNR as a site on the Contaminated and Cleaned Up Sites Map, **Figure 6**.

One nearby property was identified by the WDNR as sites on the Contaminated and Cleaned Up Sites Map, **Figure 6**.

- Smith Service Center, 231 North Fair Oaks Avenue, is shown as a closed site. See **Section 4.2** for additional information.

SCS reviewed the WDNR website for sites listed on the Bureau of Remediation and Redevelopment Tracking System (BRRTS) at 3450 Milwaukee Street. Three sites are listed under E C Voit & Sons. Two sites are petroleum storage tank closures with no action required. One site is a closed MG&E spill site. See **Section 4.2** for additional information.

4.2 WISCONSIN DEPARTMENT OF NATURAL RESOURCES FILE REVIEW

SCS reviewed records for the Smith Service Center site and the three E C Voit & Sons sites that were available on the WDNR web site. The purpose of the file review was to obtain sufficient information to determine if a REC exists on the Property in connection with the site. The WDNR records and information from Mr. Voit indicate that the E C Voit & Sons sites are located on the south part of the Voit Land LLC parcel that is not part of the Property. Copies of selected documents are included in **Appendix C**.

4.2.1 Smith Service Center, 231 North Fair Oaks Avenue

The 231 North Fair Oaks Avenue parcel is a small triangle of land located next to the street. The parcel does not extend to the Property border.

The leaking underground storage tank (LUST) site opened in 1992 and closed in 1994. Petroleum-contaminated soil was detected in soil samples collected during the closure assessment for a 560-gallon used oil underground storage tank (UST). The tank had been located near the property line with 219 North Fair Oaks Avenue to the south. The property owner suggested that the contamination was from concrete forms stored at 219 North Fair Oaks Avenue that were coated with used oil. A figure in the records shows the concrete forms were located close to the property line. A soil sample collected near the concrete forms had a higher petroleum concentration than the soil samples collected at the removed tank, but a duplicate soil sample from that same location had a significantly lower concentration. The WDNR determined that the petroleum contamination on the Smith Service Center was not significant and closed the site.

Mr. Voit said that the Voit family formerly owned the 219 North Fair Oaks parcel, which does adjoin the Property across Starkweather Creek. The parcel is currently being sold on a land contract. He said that his family was not involved with pouring concrete, and would not have owned concrete forms or stored them on the parcel. City Directories list Crete Co. (a concrete product manufacturer) at 221 North Fair Oaks Avenue between 1969 and 1989. The address was likely located on the 219 North Fair Oaks Avenue parcel.

The potential for petroleum-contaminated soil on the nearby Smith Service Center property and on the adjoining property at 219 North Fair Oaks Avenue are not identified as a REC for the Property due to the distance to the closed tank and former concrete forms, and the presence of Starkweather Creek at the Property line.

4.2.2 E C Voit & Sons, Tank Closure, 1998

One 6,000-gallon gasoline UST and one 10,000-gallon diesel UST were closed/removed from the Voit Land LLC parcel in December 1998. Petroleum-contaminated soil was not detected in the closure assessment soil samples. A tank closure assessment report was submitted to the WDNR in April 1999. No action was required by the WDNR.

Mr. Voit said that the two removed tanks were formerly located near the current 1,000-gallon diesel AST that is east of the Ready Mix office building near the agricultural land.

The closed UST site is not identified as a REC for the Property due to the distance, the performance of a closure assessment without noted impacts, and the No Action Required status.

4.2.3 E C Voit & Sons, Tank Closure, 2004

One 7,000-gallon fuel oil UST was closed/removed from the Voit Land LLC parcel on June 29, 2004. Petroleum-contaminated soil was not detected in the closure assessment soil samples. A tank closure assessment report was submitted to the WDNR in September 2004. No action was required by the WDNR.

The report showed the removed tank was formerly located west of the Ready Mix building. Mr. Voit confirmed the location.

The closed UST site is not identified as a REC for the Property due to the distance, the performance of a closure assessment without noted impacts, and the No Action Required status.

4.2.4 MG&E Spill, 2009

The WDNR records show that a power pole with a 3-phase transformer snapped on June 18, 2009, during a storm. The transformer contained mineral oil with polychlorinated biphenyls (PCBs). An estimated 22 gallons of oil were released to the ground surface when the transformer ruptured. MG&E was identified as the responsible party.

An excavation approximately 7 feet in diameter and 15 inches deep was performed on June 22, 2009. Ten 55-gallon drums of dirt and vegetation were removed and disposed by MG&E. The transformers and equipment were no longer in use and were removed from the site by MG&E. The WDNR closed the site in November 2009.

The spill location was not shown in the WDNR records. Mr. Voit said it was on the Voit Land LLC parcel, south of the Property. The approximate area where he indicated the spill occurred is shown on **Figure 3**. It is estimated to be approximately 230 feet south of the Property.

The closed spill site is not identified as a REC for the Property due to the distance, the remedial excavation that was performed, the closed site status, and the presence of surface water along the Property line.

4.3 WISCONSIN PETROLEUM/HAZARDOUS LIQUIDS STORAGE TANK DATABASE

SCS reviewed the Wisconsin Petroleum / Hazardous Liquids Storage Tank Database for registered tanks on Milwaukee Street. A copy of the tank list and copies of the tank details are included in **Appendix E**.

- Four petroleum storage tanks are currently in use at the Kwik Trip station at 4112 Milwaukee Street. They are not identified as a REC for the Property based on the distance.

- Seven petroleum storage tanks are listed for 3450 Milwaukee Street:

  - Two 1,000-gallon diesel ASTs are currently in use. The tanks were observed near the Ready Mix facility during the June 6, 2018, site visit.

  - One 1,000-gallon diesel UST and one 1,000-gallon gasoline UST were closed/removed in 1979. Mr. Voit didn't know where the former tanks had been located. He assumed they would have been near the Ready Mix facility. He said it was highly unlikely they would have been located on the Property since they would have been in the way of the surface mining activity.

  - One 6,000-gallon gasoline and one 10,000-gallon diesel UST near the Ready Mix facility were closed/removed in 1998. See **Section 4.2.2**.

  - One 7,000-gallon fuel oil UST near the Ready Mix facility was closed/removed in 2004. See **Section 4.2.3**.

Five of the seven petroleum storage tanks registered to 3450 Milwaukee Street are/were located near the Ready Mix facility, and it is probable that the remaining two tanks were also located in that area. The petroleum storage tanks on the south part of the Voit Land LLC parcel are not identified as a REC for the Property due to the distance.

4.4 ENVIRONMENTAL DATABASE REPORT

Environmental Risk Information Service (ERIS) reviewed state, tribal, and federal environmental databases to identify sites with known or potential contamination located on the Property and on properties located near the Property. The ERIS report, dated May 24, 2018, is included in **Appendix D**.

ERIS searches a specific minimum distance from the Property for each environmental database, as defined by the ASTM E 1527-13. A list of all the databases reviewed, the minimum search distance used, the number of sites located within defined distances, maps showing the location of the identified sites, and detailed information pertaining to each site are included in the ERIS report.

The following environmental databases and acronyms are used in the Property discussion. See the ERIS Database Report (**Appendix D**) for a full list of databases searched for evaluation of the Property.

National Databases and Acronyms		
RCRA-LQG	RCRA Large Quantity Generators	Identifies sites that generate over 1,000 kilograms (kg) of hazardous waste, or 1 kg of acutely hazardous waste per month.
RCRA-SQG	RCRA Small Quantity Generators	Identifies sites that generate between 100 and 1,000 kg of hazardous waste per month.
RCRA-NonGen	RCRA Non-Generators	Identifies sites that are not currently generating of hazardous waste.
RCRA-CESQG	RCRA Conditionally Exempt Small Quantity Generators	Identifies sites that generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

State Databases and Acronyms		
BRRTS	Bureau of Remediation and Redevelopment Tracking System	The web-based WDNR tracking system for contaminated sites.
SHWIMS	Solid & Hazardous Waste Information Management System	Information on sites, and facilities operating at sites, that are regulated by the Waste Management program.
UST / AST	Storage Tank Database	WDATCP list of registered underground storage tanks and aboveground storage tanks.
LUST	Leaking Underground Storage Tank Sites	WDNR list of all leaking underground storage tank sites.
SPILLS	Spills Summary Report	WDNR list of sites where hazardous substances were discharged. Spills are usually cleaned up quickly and the files are closed without significant follow-up.

4.4.1 Database Listings for the Property

The Property is identified on the following databases:

Database Listing for the Property				
Site Name	**Site Address**	**Database**	**Site Status**	**Note**
E C Voit & Sons, Inc.	3450 Milwaukee Street	AST	In Use	Two 1,000-gallon diesel ASTs. **Section 4.3**.
E C Voit & Sons	3450 Milwaukee Street	BRRTS	No Action required	1998 Tank Closures. See **Section 4.2.2** and **Section 4.3**.
E C Voit & Sons	3450 Milwaukee Street	BRRTS	No Action required	2004 Tank Closures. See **Section 4.2.3** and **Section 4.3**.
E C Voit & Sons	3450 Milwaukee Street	Spills	Closed	MG&E mineral oil with PCBs spill. See **Section 4.2.4**.
E C Voit & Sons, Inc.	3450 Milwaukee Street	UST	Closed/ Removed	7,000-gallon fuel oil UST 6,000-gallon gasoline US 10,000-gallon diesel UST 1,000-gallon gasoline UST 1,000-gallon diesel UST See **Sections 4.2.2**, **4.2.3**, and **4.3**.

4.4.2 Database Listings for Adjoining and Nearby Properties

The following sites are discussed for reasons that may include their proximity to the Property, their possible upgradient location from the Property based on the estimated groundwater flow direction, the type of contaminant released, the estimated depth to groundwater, and the status of the site.

Database Listings for Adjoining and Nearby Properties					
Site Name	**Site Address**	**Database**	**Location**	**Status**	**Note**
Jones Mail Service	221 North Fair Oaks Road	AST	Possibly adjoining to the west	In use	2,000-gallon diesel AST. The AST may be/been located on the adjoining property across Starkweather Creek at 219 North Fair Oaks Avenue.
ARS	219 Fair Oaks Avenue	AST	Adjoining to the west	Closed/ Removed	2,000-gallon diesel AST was Closed/Removed from the adjoining property across Starkweather Creek.
Fruehauf Corp	219 North Fair Oaks Avenue	RCRA Non-Generator	Adjoining to the west	No longer generating hazardous waste	It appears that in 1986 the site was a large quantity generator of hazardous waste including chlorinated solvents. In 1999 it became a non-generator of hazardous waste due to the occupants moving.
Smiths Service Center	231 North Fair Oaks Avenue	UST	Nearby to the west	Closed/ Removed	500-gallon used oil UST
Smiths Service Center	231 North Fair Oaks Avenue	LUST	Nearby to the west	Closed	Site opened in 1992 after removal of the used oil UST and closed in 1994.
Smiths Service Center (Former)	231 North Fair Oaks Avenue	RCRA Non-Generator	Nearby to the west	No longer generating hazardous waste	It appears that in 1986 the site was a conditionally exempt small quantity generator of hazardous waste including chlorinated solvents. In 2006 it became a non-generator.
Acme Automotive Center	251 North Fair Oaks	AST	Adjoining to the west	Closed/ Removed	500-gallon used oil UST was closed/removed

The three adjoining and nearby properties to the west, between the Property and North Fair Oaks Avenue, hold potential environmental concerns due to their historical use by businesses that used and stored petroleum products and hazardous substances. The adjoining properties are separated

from the Property by Starkweather Creek. Due to the creek, the distance, and the sidegradient direction, adjoining and nearby properties to the west are not identified as a REC for the Property.

SCS evaluated the ERIS report in conjunction with information obtained through the site inspection, historical record review, and interviews. None of the other identified sites are likely to impact the Property based on factors that could include the following:

- The identified site's location relative to the Property
- The status of the identified site
- The estimated groundwater depth on the identified site and on the Property
- The estimated groundwater flow direction on the identified site relative to the Property
- The database listing is for a permitted use or activity with no violations or releases reported

5.0 HISTORICAL LAND USE RECORDS

In accordance with ASTM E1527-13 and the AAI rule, reasonably ascertainable historical records were reviewed, and an attempt was made to interpret the historical land use back to the obvious first developed use of the Property.

SCS contacted Mr. Mike Wolf, the Town of Blooming Grove Clerk, Treasurer and Administrator, and asked to review records for the Voit family property. Mr. Wolf said that he started working for the Town in 2002 and in the past 16 years he knew there had been no permits, notices of violation, or conditional use applications relating to the surface mining or Ready Mix facility. He acknowledged that it was unusual and said that it was likely because those operations began before the Town was zoned or required permits. He said that the Town records prior to 2002 were poorly maintained, so it was possible that historical records had been created but were not available.

Mr. Wolf provided records relating to the East Side Business Men's Association use of a field on the Voit family property for a circus. The records included electrical permits and fire inspections from 1989 to 1993. The records included correspondence from 2002 to 2003 where concerns about zoning were raised regarding the circus. The records do not include information pertinent to the environmental assessment and are not included in the report.

Mr. Wolf said that the Town of Blooming Grove had a fire department until about 3 years ago when it entered into a contract with the City of Madison. He didn't recall a fire call to the Voit family land since 2002. He reviewed the fire department records prior to 2002 and told Ms. Brickson that he did not find any records for fire department calls to the Voit family property.

The following table summarizes the historical resources reviewed.

5.1 HISTORICAL RESOURCES REVIEWED

5.2 CHRONOLOGICAL HISTORY OF THE PROPERTY AND ADJOINING PROPERTIES

The following table presents a chronology of the Property and adjoining properties based on the City Directories and the topographic maps. The aerial photographs are discussed in **Section 2.4.2.** Copies of the historical records are included in **Appendix B**.

Chronological History of the Property and Adjoining Properties		
Years	**Description**	**Sources**
1890-1906	The maps show the Property as vacant land located between the Chicago, Milwaukee, and Saint Paul Railroad corridor and a road that is in the general vicinity of Milwaukee Street. In 1890 and 1892 the land is shown as a marsh or swamp with a creek flowing through it. In 1904 and 1906, most of the Property is shown as higher ground with an elevation of approximately 880 feet. The creek is shown closer to the railroad corridor. The marsh or swamp is on the east and west sides of the Property. A building is present on the adjoining property to the south near the road.	Topographic Maps
1931-1941	Milwaukee Street addresses stop at 3322. In 1931 George Voit and Erhardt C Voit are listed without address numbers. In 1935 and 1941, George Voit and Erhardt C Voit sand and gravel are listed without address numbers. There are no listings for the adjoining properties to the west along North Fair Oaks Avenue.	City Directories
1947	Erhardt C Voit, sand and gravel is listed at 3490 Milwaukee Street. There are no listings for the adjoining properties to the west along North Fair Oaks Avenue.	City Directories
1952, 1958	Erhardt C Voit, and EC Voit & Sons are listed at 3490 Milwaukee Street. Hanson Wrecking (building wreckers) is at 251 N Fair Oaks Avenue.	City Directories
1963	Erhardt C Voit, and EC Voit & Sons, ready mix concrete are listed at 3490 Milwaukee Street. **251 N Fair Oaks Avenue:** Madison Moving and Wrecking Wrecking (building wreckers)	City Directories

Chronological History of the Property and Adjoining Properties		
Years	**Description**	**Sources**
1969, 1974	EC Voit & Sons, ready mix concrete are listed at 3490 Milwaukee Street. **North Fair Oaks** occupants: **219**: Fruehauf Trailer Company (sales), Madison Truck & Trailer Center (truck dealers), Yerges Transportation (truck leasing) **221** (likely part of 219): Crete Co. (concrete product manufacturers) **231**: Foley Equipment (truck repair) **251**: Acme Welding and Drive Line (welders), Madison Moving and Wrecking (in 1969) Ace Vinyl Top & Body Shop (in 1974) In the 1969 topographic map, the Property is labeled Gravel Pits. An unimproved road runs between Milwaukee Street and the Property. There are four buildings on the adjoining property to the south. There are two building between Starkweather Creek and North Fair Oaks Avenue.	City Directories Topographic Map
1979, 1984, 1989, 1996, 1999, 2003, 2008, 2013	EC Voit & Sons, ready mix concrete are listed at 3450 Milwaukee Street. In the 1974 topographic map, the Property is labeled Gravel Pits. An unimproved road runs between Milwaukee Street and the Property. There are buildings on the adjoining property to the south. There are two building between Starkweather Creek and North Fair Oaks Avenue. In the 1983 topographic map, the Property is labeled Gravel Pits. Two ponds are present. An unimproved road runs between Milwaukee Street and the Property. There are buildings on the adjoining property to the south. There are three building between Starkweather Creek and North Fair Oaks Avenue.	City Directories Topographic Maps
1984	**North Fair Oaks** occupants: **219**: Fruehauf Trailer Company (sales), Madison Truck & Trailer Center (truck dealers) **221** (likely part of 219): Crete Co. (concrete product manufacturers) **231**: Smiths Service Center (truck & auto repair) **251**: Acme Welding and Drive Line (welders), Ace Vinyl Top	City Directories
1989	**North Fair Oaks** occupants: **219**: ARS Hauling (trucking), ARS Refinishing (sandblasting) **221** (likely part of 219): Crete Co. (concrete product manufacturers) **231**: Smiths Service Center (truck & auto repair) **251**: Ace Vinyl top (auto upholstery), ACME Welding and Radiator Service	City Directories
1996	**North Fair Oaks** occupants: **219**: ARS Hauling (trucking **231**: Smiths Service Center (truck & auto repair) **251**: Ace Vinyl top (auto upholstery), ACME Welding and Radiator Service	City Directories
1999	**North Fair Oaks** occupants: **219**: ARS Hauling (trucking), Ace Auto Upholstery **231**: Smiths Service Center (truck & auto repair) **251**: ACME Radiator, ACME Mini Warehouses	City Directories
2003	**219**: Dr. Performance (auto body repair and painting) **231**: TC Carpet Care (carpet and rug cleaners) **253**: Stock-N-Lock Storage	City Directories
2008, 2013	**219**: East Side Service (boat repair) **231**: TC Carpet Care (carpet and rug cleaners, Pro Carpet-Dane Co LLC (carpet and rug cleaners) **251**: Stock-N-Lock Storage	City Directories
2015	The Property is not labeled Gravel Pits. Two ponds are present.	Topographic Maps

6.0 SITE RECONNAISSANCE

6.1 METHODOLOGY AND LIMITING CONDITIONS

Ms. Lisa Brickson of SCS performed the Property inspection and reconnaissance on June 6, 2018. The weather at the time of the inspection was partly cloudy with temperatures around 75ºF. Photographs taken during the site inspection are included in **Appendix A**. The approximate location where the site photographs were taken, and the direction the camera was facing, are marked on **Figure 7**.

Mr. Tom Voit met Ms. Brickson at the Ready Mix facility. They talked about the Property history, and reviewed aerial photographs and WDNR documents in the Ready Mix office. The Ready Mix bookkeeper, Jenny, was also present. Mr. Voit drove Ms. Brickson around the Property to help show the roads and describe the Property borders since they were not marked.

Ms. Brickson then drove the SCS truck to the Property and walked portions of the Property alone. Portions of the Property were not inspected due to steep slopes, tall vegetation over uneven ground surfaces, and poison ivy. Mr. Voit met Ms. Brickson on the Property at the end of the visit and locked the gate to the Ready Mix facility.

The Property has a network of unimproved roads that provides access to some areas. Other areas are accessible only by walking. There are numerous significant changes in elevations between the high filled area on the 8.0-acre parcel to low wetlands along Starkweather Creek. Several mounds of relatively fresh sand and sand/gravel mixtures were observed on the higher elevations and closer to Starkweather Creek near the former rail spur. The ground surface ranged from well-vegetated to bare ground. An area of bare ground near the former rail spur contained hard-packed sand/gravel. That area and other areas on the Property contained a thin layer of concrete.

Large mounds of soil with trees growing through them were observed on the Property. The largest mounds were observed on slopes located south and southeast of the filled area on the 8-acre parcel. Other mounds were observed in the lower elevations along Starkweather Creek. Based on the size of some of the trees, the soil mounds may have been present for many years. The ground surface in the low-lying land near the creek had significant undulations that were covered with tall vegetation.

6.2 SUMMARY OF PROPERTY INSPECTION OBSERVATIONS

The Property inspection observations are summarized below.

Summary of Property Inspection Observations			
Potential Environmental Concern	**Observed**	**Not Observed**	**Notes**
Hazardous Substances in Connection with the Property Use	☐	☒	Hazardous substances were not observed.
Petroleum Products in Connection with the Property Use	☐	☒	Petroleum products were not observed.
Aboveground or Underground Petroleum Storage Tanks (ASTs/USTs)	☐	☒	Petroleum ASTs and/or USTs were not observed.
Suspect Containers Not in Connection with Site Use	☐	☒	Suspect containers were not observed.
Electrical or Mechanical Equipment Likely to Contain PCBs	☐	☒	Equipment likely to contain PCBs was not observed.
Exterior or Interior Stains or Corrosion	☐	☒	Stains or corrosion were not observed.
Drywells, Drains or Sumps	☐	☒	Drywells, drains or sumps were not observed.
Process Wastewater Discharges	☐	☒	Wastewater discharges from a process performed on the Property were not observed.
Septic or Sewage Tanks	☐	☒	Septic or sewage tanks were not observed. The Property has municipal sanitary sewer service.
Pits, Ponds or Lagoons	☐	☒	Pits, ponds or lagoons associated with wastewater were not observed.
Pools of Liquid or Standing Water	☐	☒	Pools of liquid or standing water were not observed, except for Pond #1.
Solid Waste Dumping, Landfills or Suspected Fill Material	☒	☐	A small amount of solid waste was observed including pieces of snow fence and landscape barrier, large concrete slabs, and some old metal. Some concrete culverts were observed at the base of the slopes around the filled area. One empty blue 55-gallon drum was near the filled area on the 8-acre parcel. Fill material from road construction projects was observed on the 8-acre parcel. Mounds of soil with trees growing through them were observed on the 8–acre parcel and near Starkweather Creek.
Pesticide and Herbicide Management	☐	☒	Pesticides and/or herbicide storage was not observed.
Stained Soil or Pavement, Leaking Pipes and Equipment	☐	☒	Stained soil or pavement was not observed. Leaking pipes and equipment were not observed.
Stressed Vegetation	☒	☐	Stressed vegetation and bare ground were observed. It appeared to be from the use of heavy equipment, movement of sand and gravel, storage of rock materials, and discharge of concrete.
Potable Wells or Groundwater Monitoring Wells	☐	☒	Potable wells were not observed. The Property has municipal water service. Groundwater monitoring wells were not observed on the Property.

Summary of Property Inspection Observations			
Potential Environmental Concern	**Observed**	**Not Observed**	**Notes**
Odors	☐	☒	Unusual or strong odors were not detected.
General Housekeeping Concerns	☐	☒	General housekeeping was good.
Other Uses or Conditions of Concern	☐	☒	No other environmental concerns were observed.

7.0 INTERVIEWS

7.1 INTERVIEWS WITH CURRENT SITE OWNERS AND OCCUPANTS

Ms. Lisa Brickson of SCS interviewed Mr. Tom Voit, representing the Property owners, on June 6, 2018. Information from the interview is included in pertinent sections of the report.

8.0 DATA GAPS

No significant data gaps were identified during preparation of the Phase 1 ESA Report, with the exception that records for the source locations or testing of the backfill material for the pond on the 8-acre parcel were not obtained. SCS asked the property owner if the documentation was available and a response was not provided. The source of the fill materials was identified generally as road projects in the city.

9.0 FINDINGS AND OPINIONS

The Property is part of a larger piece of land that has been owned, managed, and occupied by the Voit Family for approximately 150 years. It was originally operated as a family farm.

By the 1930s, the northwestern part of the Property was being surface-mined for sand and gravel. During the 1940s the Ready Mix facility was constructed on the southwestern part of the Voit Land LLC parcel. The Ready Mix facility is still in operation.

During the 1950s, Starkweather Creek was re-routed closer to the railroad corridor, a railroad spur was extended over the creek onto the northwest side of the Property to deliver Portland cement in bulk to the Ready Mix facility, the adjoining property at 219 North Fair Oaks Avenue was filled, and Voit family land located east of the 8-acre parcel was sold to Mautz Paint. The company was reportedly planning to construct a building.

The adjoining properties to the west along North Fair Oaks Avenue were subsequently developed for industrial use including truck dealerships, auto and truck repair, sandblasting, welding, radiator service, boat service, and house moving and demolition. The industrial use began in the 1950s and continued to the 2000s. The industrial use of the adjoining properties by businesses that typically use and store petroleum products and hazardous substances is an environmental concern. However, Starkweather Creek forms the border between the Property and the adjoining properties to the west. Based on the presence of the creek that separates the

Property and the adjoining properties, the historical industrial use of the adjoining properties is not identified as a REC for the Property.

Aerial photographs from the 1960s and 1970s show unimproved roads extending from Property surface mining areas onto the Mautz Paint property. Small unidentified circular objects are visible near an intermittent stream/drainage ditch to the east. Unimproved roads into a remote undeveloped area can be the result of numerous activities including recreation, in this case building site considerations, and disposal.

Surface mining on the Voit family land ended approximately 45 to 50 years ago but sand and gravel were dredged out of the ponds until the mid-1980s to early 1990s.

In 2006, the WDNR granted permission to fill the pond that was located on the 8-acre Property parcel. The fill material came from road construction projects in the city. Documentation for the fill material was not obtained. The filled area is now the highest ground on the Property.

Mr. Tom Voit began officially working at the Ready Mix facility in 1986. He does not believe that waste materials from households, businesses, industries or municipalities were disposed on the Voit land (with the exception of road project material used to fill the pond on the 8-acre parcel).

Regulations for the disposal of hazardous waste and procedures for enforcing the regulations were enacted during the 1970s and 1980s. Prior to that time, it was common practice for a variety of waste materials to be disposed on low-lying land, such as wetlands, quarries and gravel pits. Historical disposal of potentially contaminated material on the Property was not reported by Mr. Voit and documentation was not encountered during the assessment. If potentially contaminated material had been historically disposed, it appears it was not done with WDNR oversight and it would have likely been put out of the way of current and future surface mining activity. Based on the topography and the aerial photographs, one area of historical disposal may have been the low-lying land near Starkweather Creek. Another area may have been the south and southeast sides of the filled pond. Mounds of soil containing some rock were observed on the Property during the site visit. The soil mounds had trees growing through them of a size indicating the mounds have been there for many years. The largest mounds were on the south and southeast slopes between the filled area on the 8-acre Property parcel and the adjoining City of Madison property. Other soil mounds were observed on the low-lying land on the northwest part of the Property near Starkweather Creek. The ground surface on the low-lying land was very uneven with significant undulations covered with tall vegetation.

In 2017, the City of Madison installed four groundwater monitoring wells on their adjoining land near the 8-acre Property parcel. The shallow water table wells were sampled four times between October 2017 and January 2018. The groundwater flows generally from the northeast toward the southwest, toward Starkweather Creek. Arsenic was detected in MW1 at a concentration greater than the ES. Nickel was detected in MW1 and MW2 at concentrations greater than the PAL and less than the ES. Tetrachloroethene was detected in MW4 at concentrations greater than the PAL and less than the ES. The results were reported to the WDNR. The WDNR response was that no further action is required at that time.

10.0 CONCLUSIONS

SCS Engineers performed a Phase 1 Environmental Site Assessment (ESA) consistent with the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries as set forth in 40 CFR, Part 312 and/or the scope and limitations of ASTM International (ASTM) Practice E1527-13 of the E C Voit & Sons property and part of the Voit Land LLC property located at 3450 Milwaukee Street in the Town of Blooming Grove, Dane County, Wisconsin the Property. Any exceptions to, or deletions from, this practice are described in **Section 11.0** of this report.

This assessment has revealed no evidence of recognized environmental conditions in connection with the Property except for the following:

1. Surface mining for sand and gravel began on Property by the 1930s, and the last of the sand and gravel was dredged from the ponds in the mid-1980s to early 1990s. Regulations for the disposal of hazardous waste and procedures for enforcing the regulations were enacted during the 1970s and 1980s. Prior to that time, it was common practice for waste materials to be disposed on low-lying land, such as wetlands, quarries and gravel pits. Historical disposal of potentially contaminated material on the Property was not reported by Mr. Voit and documentation was not encountered during the assessment. If potentially contaminated material had been historically disposed, it appears it was not done with WDNR oversight and it would have likely been put out of the way of current and future surface mining activity. Based on the topography and the aerial photographs, one area of historical disposal may have been the low-lying land near Starkweather Creek. Another area may have been the south and southeast sides of the filled pond. Mounds of soil containing some rock were observed on the Property during the site visit. The soil mounds had trees growing through them of a size indicating the mounds have been there for many years. The largest mounds were on the south and southeast slopes between the filled area on the 8-acre Property parcel and the adjoining City of Madison property. Other soil mounds were observed on the low-lying land on the northwest part of the Property near Starkweather Creek. The ground surface on the low-lying land was very uneven with significant undulations covered with tall vegetation. The presence of the old soil mounds from an unknown source in a historically surface-mined area is identified as a REC for the Property.

2. A pond on the 8-acre Property parcel was filled with WDNR permission starting in 2006. The fill material was from road construction projects. The area is now the highest land on the Property. Documentation for the fill material was not obtained.

   The Voit family sold the adjoining property to the east to Mautz Paint in the 1950s. Aerial photographs from the 1960s and 1970s show unimproved roads extending from the Property's gravel pits onto the Mautz Paint property. Small unidentified circular objects are visible near an intermittent stream/drainage ditch to the east. Unimproved roads into a remote undeveloped area can be the result of numerous activities including recreation, in this case building site considerations, and disposal. The City of Madison subsequently purchased the adjoining land.

In 2017, the City of Madison installed four groundwater monitoring wells on their adjoining land around the 8-acre Property parcel. The shallow water table wells were sampled four times between October 2017 and January 2018. The groundwater flows generally from the northeast toward the southwest, toward Starkweather Creek. Arsenic was detected in MW1 at a concentration greater than the NR 140 ES. Nickel was detected in MW1 and MW2 at concentrations greater than the NR 140 PAL and less than the ES. Tetrachloroethene was detected in one well, MW4, at concentrations greater than the PAL and less than the ES. The results were reported to the WDNR. The WDNR response was that no further action is required at that time.

The detection of contaminants in the groundwater near the Property, historical unimproved roads and unidentified objects on the adjoining property, the presence of old soil mounds on the 8-acre parcel, and the lack of documentation for fill material on the 8-acre Property parcel are identified as a REC for the Property.

11.0 DEVIATIONS

There were no significant deviations from the standards identified in EPA Standards and Practices for AAI as set forth in 40 CFR, Part 312 and/ or ASTM E 1527-13.

12.0 ADDITIONAL SERVICES

No additional services were identified by the User in the preparation of this report.

14.0 QUALIFICATIONS AND SIGNATURES OF ENVIRONMENTAL PROFESSIONALS

SCS Engineers is a full-service civil and environmental engineering firm located in Madison, Wisconsin. Project team resumes are included in **Appendix F**.

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in 40 CFR Part 312.10.

We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the target property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Subject: Voit Ponds - Town of Blooming Grove

Dear Mr. Voit:

On May 13, 2005, I met with you, your attorney - Buck Sweeney, consultant - Bill Biesmann and Dane County Zoning inspector – Scott Schroekenthaler. The purpose of the meeting was to discuss how two gravel pit ponds (ponds #1 & #2 herein) on your property pertain to State statutes and/or local ordinances.

Pond #1: Pond #1 is located in the NE¼, NE¼, Section 5, T.7N, R.10E, Town of Blooming Grove (see drawing). This pond is connected to Starkweather Creek via an open channel/waterway. This pond reportedly sustains a population of stocked fish and is registered with the Wisconsin Department of Agriculture, Trade and Consumer Protection. Due to the pond connection and relationship with Starkweather Creek – you must apply for and obtain a permit to fill the pond in accordance with Chapter 30, Wisconsin Statutes prior to filling or modifying the pond or connecting waterway.

Pond #2: Pond #2 is located north and east of Pond #1 and is in the NW ¼, NW ¼, Section 4, T.7N, R.10E, Town of Blooming Grove. This pond is adjacent to Pond #1 and is separated by a strip of land that is between 30 and 40-feet wide. Pond #2 is not connected to Pond #1 or Starkweather Creek via open or closed conduit. Filling this pond is not within the Department's jurisdiction as it pertains to Chapter 30, Wisconsin Statutes. This means you may continue filling this pond so long as other State and local requirements are met. I also determined that wetland conditions do not exists within the immediate gravel banks or wet footprint of Pond #2.

Wetlands: During our meeting and tour of the property, I observed wetland conditions and drainage swales along the western and northern edge of the property. Per this letter, I am recommending that a wetland delineation be conducted in accordance with the 1987 Army Corps of Engineers Manual for Delineating Wetlands. This delineation should be conducted in order to ensure filling beyond the imprint of Pond #2 does not result in wetland filling as regulated by (but not limited to) NR 299, Wisconsin Administrative Code. Once the delineation is conducted, you may apply for a permit to fill the ditches located within wetlands for the expressed purposes of restoring wetland hydrology; thereby enhancing the wetland environment and improving

quality of the water discharging to Starkweather Creek. Such a proposal should be designed and submitted in accordance with NR 353, Wisconsin Administrative Code.

Please contact Jim Bertolacini in order to ascertain how the filling the pond and how your current concrete production operation pertains to Stormwater Discharge Permits as required in NR 216, Wisconsin Administrative Code. Mr. Bertolacini can be reached at: (608)275-3201

If you have any questions regarding this determination contact me at: (608)275-3313.

Sincerely,

Mike Halsted

February 9, 2018

Mr. Tom Voit
4526 Sandpiper Trail
Cottage Grove, WI 53527

Dear Mr. Voit:

Thank you for last Tuesday's meeting to discuss the City's purchase of the quarry ponds at your 3490 Milwaukee Street farm. As requested, below is a summary of the City of Madison's sampling results from the four shallow monitoring wells installed on City property surrounding the former quarry pond. Please see the attached map for locations of each well. I've also included an overview of the environmental assessments the City would like to conduct prior to purchase of this property.

The City installed the wells on June 26, 2017 and sampled them four times between October 2017 and January 2018. Sampling was conducted on four dates to confirm results and to test for compounds that weren't included in the original samplings. The City tested for volatile organic compounds (VOCs), dissolved metals, and polycyclic aromatic hydrocarbons (PAHs), although not all for each date.

In the table below, only confirmed detections that exceed a State groundwater standard are included. For each compound, the State has determined a NR 140 Preventive Action Limit (PAL) and Enforcement Standard (ES). In general, detections greater than the PAL indicate *potential* contamination problems. For detections greater than the ES, the DNR typically requires additional monitoring or remediation effort to protect human health and welfare.

Detections of compounds that were less than the groundwater standards and/or less than the laboratory's limit of quantitation (LOQ) are not included in the table. For example, no results are shown for MW3-NE since there were no confirmed detections for this well greater than the groundwater standards. A more detailed data table along with all original laboratory reports can be provided upon request. Groundwater at the site generally flows from the northeast to the southwest, toward Starkweather Creek.

		MW1-SW	MW2-SE	MW4-NW			NR 140 Standards	
Sampling Date		1/9/18	1/9/18	10/4/17	11/30/17	12/20/17	PAL	ES
Arsenic	ug/L	37.4	--	--	--	--	1.0	10
Nickel	ug/L	38.6	73.8	--	--	--	20	100
Tetrachloroethylene	ug/L	--	--	1.7	1.5	2.3	0.5	5

The wells show low-level impacts of several metals (arsenic and nickel) and tetrachloroethylene, a solvent commonly used in dry cleaning and also known as perc. As required with PAL and ES exceedances, these results were reported to the DNR. The DNR's response is that no further action—monitoring or clean up—is required at this time.

When purchasing a commercial or industrial property, the City of Madison routinely conducts a historical review of the property, called a Phase 1 environmental site assessment (Phase 1 ESA). During a Phase 1 ESA, the City reviews assessment and building inspection records, historical maps and photos, newspaper articles, and environmental databases. The City also interviews current and former property owners to identify any potential environmental conditions. Based on the findings of the Phase 1, the City often conducts a Phase 2 ESA, taking soil and groundwater borings throughout the property to test for potential contamination.

The City goes through this process for all non-residential property purchases. Given the history of such properties, it is common to find some low-level contamination. The presence of low-level or 'incidental' contamination typical of a former quarry will not stop the City of Madison from purchasing the property. The cost to investigate these properties is born solely by the City of Madison as part of the due diligence we conduct prior to purchase.

The City requests to perform a Phase 1 ESA and likely a Phase 2 on the portion of the Voit property under consideration. These reports would be shared with you in full. Please contact Brynn Bemis of my staff with questions regarding the monitoring well test results (608.267.1986, bbemis@cityofmadison.com). To initiate the Phase 1 ESA, please contact Heidi Radlinger of the City's Real Estate office (608.266.6558 and hradlinger@cityofmadison.com).

Sincerely,

Robert F. Phillips, P.E.
City Engineer

BOLD = Values met or exceed an NR 140 enforcement standard (ES).

Italics and underlined = Values met or exeed an NR 140 Preventive Action Limit (PAL).

J = Result is less than the reporting limit but greater than or equal to the method detection limit--the concentration is an approximate value.

NE = Standard not established.

"--" = Compound or analyte not sampled

ug/L = micrograms per liter or parts per billion (ppb)

PAHs = Polycyclic aromatic hydrocarbons

VOCs = Volatile organic compounds

NOTES:

1. Only compounds with detections are included in this table--nondetections have been hidden for display purposes. In general, PAHs, VOCs, and metals were analyzed. Nondetect values are grayed out.

2. Most of the data is *unfiltered,* but only *filtered* metals data from 1/9/18 should be considered accurate. Unfiltered metals data is shaded gray to indicate it does not reflect dissolved metals.

SCS ENGINEERS

USER[1] QUESTIONNAIRE
Phase 1 Environmental Site Assessment
Part of the E C Voit & Sons and Voit Land LLC Property
3450 Milwaukee Street, Town of Blooming Grove, Dane County, WI
June 5, 2018
SCS Engineers File No. 25218096.00

User
City of Madison Engineering Division
210 Martin Luther King Jr. Blvd., Room 115
Madison, WI 53703

Environmental Professional:
SCS Engineers
2830 Dairy Drive
Madison, WI 53718

In order to qualify for one of the *Landowner Liability Protection*[2] (LLP) offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001, the *User* must provide the following information (if available) to the *environmental professional*. Failure to provide this information could result in a determination that "*all appropriate inquiry (AAI)*" is not complete.

1. **Environmental cleanup liens that are filed or recorded against the *Property* (40 CFR 312.25).** Are you aware of any environmental cleanup liens against the *Property* that are filed or recorded under federal, tribal, state, or local law?
   ☑ No ☐ Yes (explain)

2. **Activity and land use limitations (AULs) that are in place on the *Property* or that have been filed or recorded in a registry (40 CFR 312.26).** Are you aware of any AULs, such as *engineering controls*, land use restrictions, or *institutional controls* that are in place at the *Property* and/or have been filed or recorded in a registry under federal, tribal, state, or local law?
   ☑ No ☐ Yes (explain)

3. **Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28).** As the *User* of this *Environmental Site Assessment (ESA)*, do you have any specialized knowledge or experience related to the *Property* or nearby properties? For example, are you involved in the same line of business as the current or former *occupants* of the *Property* or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?
   ☑ No ☐ Yes (explain)
   However, the City of Madison does own the adjoining properties.

[1] As defined in American Society for Testing and Materials (ASTM) Standard E 1527-13, Section 3.2.98 – "The party seeking to use Practice E 1527 to complete an environmental assessment of the *Property*."
[2] Text in *italics* defined in the ASTM Standard E 1527-13.

4. **Relationship of the purchase price to the fair market value of the *Property* if it were not contaminated (40 CFR 312.29).** Does the purchase price being paid for this *Property* reasonably reflect the fair market value of the *Property*?
□No ☑ Yes

If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the *Property*?
□ No □ Yes (explain)

5. **Commonly known or *reasonably ascertainable* information about the *Property* (40 CFR 312.30).** Are you aware of any commonly known or *reasonably ascertainable* information about the *Property* that would help the *environmental professional* to identify conditions indicative of releases or threatened releases? For example, as *User*:
   a) Do you know the past uses of the *Property*?
   □ No ☑ Yes (explain)

   From aerials we can see it was used for nonmetallic mining and as a concrete batch plant.

   b) Do you know of specific chemicals that are present or once were present at the *Property*?
   ☑No □ Yes (explain)

   c) Do you know of spills or other chemical releases that have taken place at the *Property*?
   ☑No □ Yes (explain)

   d) Do you know of any environmental cleanups that have taken place at the *Property*?
   ☑ No □ Yes (explain)

6. **The degree of obviousness of the presence or likely presence of contamination at the *Property*, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31).** As the *User* of this *ESA*, based on your knowledge and experience related to the *Property*, are there any *obvious* indicators that point to the presence or likely presence of contamination at the *Property*?
□ No ☑ Yes (explain)

The City has installed and sampled 4 water table monitoring wells just outside the property that indicate some low-level solvent contamination. It is not clear if this property is the source, but contaminated materials may have been used to fill in the second pond on the property. These data have already been provided to SCS.

TOPOGRAPHIC MAP RESEARCH RESULTS

Date: 2018-05-22

Order Number: 20180522207

Site Name: E C Voit & Sons, Voit Land LLC Property
Address: 3450 Milwaukee Street, Madison, WI, 53714

We have searched USGS collections of current topographic maps and historical topographic maps for the project property. Below is a list of maps found for the project property and adjacent area. Maps are from 7.5 and 15 minute topographic map series, if available.

Year	Map Series
2015	7.5
1983	7.5
1974	7.5
1969	7.5
1959	15
1906	15
1904	15
1892	15
1890	15

Topographic Maps included in this report are produced by the USGS and are to be used for research purposes including a phase I report. Maps are not to be resold as commercial property.

Historical Information Gatherers

This Research Summary identifies the products and services provided by Historical Information Gatherers, Inc. (HIG) for the above referenced site location. All products are provided as PDFs unless otherwise noted.

City Directory Pages/Abstracts

Research Methodology: A search was conducted for city directories that include coverage of the site area using HIG's City Directory Collection and other sources, if needed. Directories for the following years were identified for the site area. A comma between date ranges indicates a gap of 10 years or more in available city directories:

Madison-Dane County 1999-2013
Madison 1916-1996

The above listed directories were reviewed at approximate 5 year intervals to determine if the street(s) specified in the order were included in the directories and had listings for the site area. HIG attempted to identify former street names and aliases and if identified, these were also included in the review.

Research Results: City directory information, when provided, was used to create a multi-page file(s) named CD- followed by the street name. When City Directory Pages are provided, the publication name and date are shown at the top of each page. When a City Directory abstract is provided, the first page of the abstract includes the relevant publication information. The years of coverage identified for each street and any identified historical street names are as follows:

Fair Oaks Avenue North (1931-2013)
Milwaukee Street (1931-2013)

Disclaimer & Limitation of Liability

This Research Summary and the related documents and images provided by Historical Information Gatherers (hereafter referred to as the "Site Specific HIG Data") contain information obtained from a variety of public and private sources. Additional information for the site and surrounding properties may exist. Accordingly, there can be no guaranty or warranty that the information provided is complete for its particular intended purpose. No warranty expressed or implied, is made whatsoever in connection with the Site Specific HIG Data. Historical Information Gatherers specifically disclaims the making of any such warranties, including without limitation, merchantability or fitness for a particular purpose. Historical Information Gatherers, its officers, employees and independent contractors cannot be held liable to anyone for any loss or damage, whether arising out of errors or omissions, negligence, accident or any other cause, resulting directly or indirectly from any information provided or any information not provided in the Site Specific HIG Data. Any liability on the part of Historical Information Gatherers is strictly limited to a refund equal to the amount paid for the Site Specific HIG Data.

HIG Copyright Notice

This Research Summary and the selection, arrangement and compilation of Site Specific HIG Data are the property of Historical Information Gatherers. © Copyright 2018 by Historical Information Gatherers, Inc. All rights reserved. The person or entity that ordered and paid for the Site Specific HIG Data is granted a personal, non-assignable, limited license to reproduce the Site Specific HIG Data solely for purposes of providing supporting documentation for reports produced for the site location which is noted on page one of this Research Summary. Any other reproduction or other use of the Site Specific HIG Data in any media or format, in whole or in part, is expressly prohibited without prior written permission from Historical Information Gatherers, and the person or entity that ordered and paid for the Site Specific HIG Data assumes all liability for the making of any such reproductions.

Licensing Agreement

The licensing agreement between Historical Information Gatherers and infoGroup provides that Historical Information Gatherers may create photocopies or reproductions of portions of Polk City Directories, Hill-Donnelley Criss-Cross Directories and other directories under infoGroup copyright. The licensing agreement also permits the person or entity that ordered and paid for the Site Specific HIG Data to include photocopies or reproductions of portions of Polk City Directories, Hill-Donnelley Criss-Cross Directories and other directories under infoGroup copyright as supporting documents for reports produced for the site which is the subject of the Site Specific HIG Data.

CORRESPONDENCE/MEMORANDUM

State of Wisconsin

DATE: September 6, 1994 FILE REF: 1689

TO: Closure Committee

FROM: WJ Wojner

SUBJECT: Smith's Service Center

Removed a 560 gallon waste oil tank and found elevated TRPH on 10/26/92. Tried to determine background because neighboring property has history of using waste oil for cement from work. Sample collected on the adjacent property was higher than near tank. Collected 4 soil samples. Did not encounter groundwater. Claimed that the tank was in good shape and there was no evidence of staining or problem in the excavation. First samples documented a problem of contamination but used TRPH and Precision Analytical Lab, second sample was for DRO but still used PAL, third samples used right lab but question location.

Madison WI 53714

SUBJECT: Closure request, Smith's Automotive Center, Madison

Dear Mr. Smith:

On June 27, 1994, the Department received a request for site "closure" for the above named site.

Section NR 726.07, Wisconsin Administrative Code, requires the Department to respond within 30 days after receipt of a request for case closure providing an estimated date by which the department intends to issue a determination on case closure.

This letter serves as written acknowledgement of your request for closure. Based on current Department workloads, your closure request will likely be reviewed within 3 to 4 months. NOTE: This is only an estimate, changes in workload may cause unforeseen delays in the review process. The Department will make every effort to review requests in a timely manner.

If you have any questions, please call me at the number listed below.

Sincerely,

Patrick McCutcheon, Unit Leader
Emergency & Remedial Response Program

re: Site closure for the Smith's Service Center site, 231 North Fair Oaks, Madison, WI 53714-1641.
Advent Project No. No. 96850.01

Dear Ms. Janke:

This letter requests a site closure for the Smith's Service Center site. Through the first stage of the site investigation, a background sample from the adjacent property yielded a higher total recoverable petroleum hydrocarbon (TRPH) concentration than the tank bed samples. The following stages of the site investigation consisted of four borings that demonstrated that the contaminants in the tank bed were relatively localized. The contamination on the Smith's Service Center site is present at concentrations below the NR 720 guidelines.

On October 26, 1992, a 560-gallon waste oil underground storage tank (UST) was removed from the Smith's Service Center site. The tank and piping were in good condition and there were no indications of contamination at the site. Laboratory analyses of soil samples collected at the time of the tank pull detected elevated levels of TRPHs.

The elevated TRPH results prompted the Department of Natural Resources (DNR) to request a background TRPH sample. This sample was collected on the adjacent property and the result was higher than that of the closure samples. This data suggested that there may be an off-site influence impacting the site. The site history revealed that the neighboring property had been used for spraying waste oil on cement forms for many years.

Advent collected four additional soil samples and had them analyzed for diesel range organics (DROs) and one sample analyzed for petroleum volatile organic compounds (PVOCs). Three of the samples were collected by hand auger and a geo-probe unit obtained the fourth sample because subsurface conditions prevented hand augering.

The sampling location information and the analytical results are summarized in Table 1. Copies of all the laboratory data are attached. Figure 1 identifies the site features and the soil boring/soil sample locations. Site photographs, soil boring logs(WDNR Form 4400-122) and drillhole abandonment Forms (WDNR Form 3300-5W) are also attached. The soils encountered in the four additional borings consisted of sands within the tank bed area and clays surrounding the tank bed area. A sample could not be obtained from the southern edge of the tank bed due to subsurface obstructions. The contaminant levels present appear localized. With the DRO concentrations present within the soil types and the lack of PVOCs present, the levels of contamination do not appear significant.

No groundwater was encountered in any of the hand auger/geo-probe boreholes or in the tank bed excavation. The low levels of petroleum compounds detected in the soil suggest that groundwater has not likely been impacted.

6100 W. EXECUTIVE DR., SUITE E ■ MEQUON, WISCONSIN 53092 ■ 414-238-1998 ■ FAX 414-238-1988
2220 MELBY ROAD ■ EAU CLAIRE, WISCONSIN 54703 ■ 715-831-1530 ■ FAX 715-831-1531

The presence of petroleum contaminants at the Smith's Service Center site does not appear significant. The levels detected by laboratory analysis do not exceed the closeout guidelines described in NR 720. Advent recommends no additional investigative work and requests closure for the Smith's Service Center site.

If you have any questions or comments, please feel free to contact me directly at (414) 238-1874 ext. 3013.

Sincerely,

ADVENT ENVIRONMENTAL SERVICES, INC.

FILE REF: 1689
UST - Dane County

Mr. Ron Smith
Smith's Automotive Center
231 North Fair Oaks
Madison, WI 53714

SUBJECT: Closure Request, Smith Automotive Center, Madison, WI

Dear Mr. Smith:

On September 6, 1994, the above named site was reviewed by the Southern District Closure Committee. The information submitted by Advent Environmental Services, Inc., was reviewed. The removal of a 560 gallon waste oil tank resulted in the discovery of subsurface contamination. The file information showed that a series of soil borings were performed at different times at your site in order to determine the extent of contamination. The results of sampling showed that the contamination had been addressed according to Department guidelines.

Based on this information, it appears as though this site has been remediated to acceptable Department standards. Therefore, closure of this site has been granted and no further action is necessary at this time. You should be aware that, if in the future, the Department receives information which demonstrates that additional work is necessary, the Department has the authority to require further action.

You should note that this letter does not constitute Department "certification" under s. 144.765(2)(a) Stats., as created by 1993 Wisconsin Act 453 (May 12, 1994). Persons who meet the definition of "purchaser" in Section 144.765(1)(c) must receive Department preapproval prior to conducting a site investigation in order to be eligible for liability exemption under s. 144.765 Stats. The Department appreciates your efforts to protect and restore the environment at this site.

If you have any questions regarding this determination I may be contacted at the number shown below.

Sincerely,

Wendell J. Wojner
LUST Coordinator
Telephone: (608) 275-3297

SUBJECT: **UNDERGROUND STORAGE TANK (UST) CLOSURE ASSESSMENT** for E.C. Voit and Sons located at 3450 Milwaukee Street, Blooming Grove, Wisconsin 53714
FISCHER Project #98279.001

To whom it may concern,

On behalf of Mr. Art Voit, **FISCHER** is submitting the attached Underground Storage Tank (UST) Closure Assessment for the above referenced site.

Documented in this report are the UST removal activities performed on December 17, 1998. Removed was one 6000-gallon gasoline UST and one 10,000-gallon diesel UST.

If you have any questions, or wish to discuss any part of this report, please feel free to contact us at **FISCHER**, (920) 745-2200.

Respectfully Submitted,

FISCHER,

Brian L. Youngwirth
Hydrogeologist

1.0 INTRODUCTION

This report documents the tank closure assessment performed during the removal of one 6000-gallon gasoline UST and one 10,000-gallon diesel UST at E.C. Voit and Sons, Blooming Grove, Wisconsin. A list of the acronyms used in this report is included in Appendix A. The removal and assessment were performed at the request of Mr. Voit.

3.0 PURPOSE AND SCOPE OF ASSESSMENT

The purpose of this assessment was to observe the removal of two USTs and associated piping, document tank closure activities, and assess the resulting excavation to determine if a release had occurred. The assessment was performed in general accordance with Wisconsin Department of Commerce (COMM) and Wisconsin Department of Natural Resources (WDNR) guidelines existing at this time. The scope of the assessment included but was not limited to:

- Observation of tank removal and closure operations.
- Collection of soil samples from the excavation limits in accordance with the WDNR, "Site Assessments for Underground Storage Tanks Technical Guidance."
- Submittal of a soil sample to a state of Wisconsin certified laboratory for appropriate analyses.
- Preparation of a report which includes a summary of all field observations, tank closure documentation, including required forms, laboratory analytical report with chain-of-custody documentation, and recommendations for compliance with WDNR and COMM guidelines.
- Communication with the client and regulatory agencies throughout the project.

5.0 TANK REMOVAL ACTIVITIES

On December 17, 1998, FISCHER personnel excavated soil and removed the USTs. Each tank was inerted with a diffused air blower. A lack of olfactory evidence suggested a lack of petroleum affected soil beneath the tanks. Each UST contained sludge that was removed by National Tank, Inc. and was properly containerized in 55-gallon DOT drums. One drum of sludge was containerized from each UST. The USTs were constructed of single wall, bare steel. The USTs were in good condition. The USTs were labeled properly by FISCHER per COMM requirements, and properly disposed of (See Appendix C - Documentation of Intent to Scrap).

7.0 ANALYTICAL TESTING

Upon completion of the tank removal activities, three soil samples were obtained, one from native soils beneath each end of the UST and one from beneath the center of the UST. These samples were submitted for analysis, per WDNR guidelines, for the presence of gasoline range organics (GRO) for the 6000-gallon UST and diesel range organics (DRO) for the 10,000-gallon UST. The samples were handled in a manner that minimized volatilization. Approximately 30 grams of the soil (not to exceed 35 grams) was added directly to a clean jar supplied by En Chem, Inc. All sample jars were placed on ice in a cooler, and transported to the laboratory (WDNR # 405132750) located in Green Bay, Wisconsin, accompanied by a completed chain-of-custody form.

Soil samples below the tank submitted for GRO and DRO analysis did not indicate the presence of DRO or GRO in excess of the laboratory method detection limit. (See Table 1 - Tank Closure Assessment Analytical Results, and Appendix D - Analytical Results and Chain-of-Custody Form).

9.0 GENERAL COMMENTS

The tank removal activities and assessment have been conducted in a manner consistent with that level of care ordinarily exercised by members of the profession currently practicing in the same locality under similar conditions. Findings, recommendations and opinions contained herein have been promulgated in accordance with generally accepted practice. No other representations, expressed or implied, and no warranty or guarantee is included in this report.

In general, information contained in such assessments may have an effect on the value of the property, and is considered confidential. Copies of this report will be submitted to others only with written authorization from the owner/owner's representative.

C. CLOSURE BY REMOVAL (continued)

	Remover Verified	Inspector Verified	NA
11. Tank labeled in 2" high letters after removal but before being moved from site.	☒Y ☐N	☐	☐
NOTE: COMPLETE TANK LABELING SHOULD INCLUDE WARNING AGAINST REUSE; FORMER CONTENTS; VAPOR STATE; VAPOR FREEING TREATMENT; DATE.			
12. Tank vent hole (1/8" in uppermost part of tank) installed prior to moving the tank from site.	☐Y ☒N	☐	☐
13. Inventory form ERS-7437 filed by owner with the Department of Commerce indicating closure by removal.	☒Y ☐N	☐	☐
14. Site security is provided while the excavation is open.	☒Y ☐N	☐	☐

D. CLOSURE IN PLACE

NOTE: CLOSURES IN PLACE ARE ONLY ALLOWED WITH THE PRIOR WRITTEN APPROVAL OF THE DEPARTMENT OF COMMERCE OR LOCAL AGENT.

1. Product from piping drained into tank (or other container).	☐Y ☐N	☐	☐
2. Piping disconnected from tank and removed.	☐Y ☐N	☐	☐
3. All liquid and residue removed from tank using explosion proof pumps or hand pumps.	☐Y ☐N	☐	☐
4. All pump motors and suction hoses bonded to tank or otherwise grounded.	☐Y ☐N	☐	☐
5. Fill pipes, gauge pipes, vapor recovery connections, submersible pumps and other fixtures removed.	☐Y ☐N	☐	☐
NOTE: DROP TUBE SHOULD NOT BE REMOVED IF THE TANK IS TO BE PURGED THROUGH THE USE OF AN EDUCTOR - EDUCTOR OUTPUT 12 FT. ABOVE GRADE.			
6. Vent lines left connected until tanks purged.	☐Y ☐N	☐	☐
7. Tank openings temporarily plugged so vapors exit through vent.	☐Y ☐N	☐	☐
8. Tank atmosphere reduced to 10% of the lower flammable range (LEL) see Section F.	☐Y ☐N	☐	☐
9. Tank properly cleaned to remove all sludge and residue.	☐Y ☐N	☐	☐
10. Solid inert material (sand, cyclone boiler slag, pea gravel recommended) introduced and tank filled.	☐Y ☐N	☐	☐
11. Vent line disconnected or removed.	☐Y ☐N	☐	☐
12. Inventory form filed by owner with the Department of Commerce indicating closure in place.	☐Y ☐N	☐	☐

E. CLOSURE ASSESSMENTS

NOTE: DETERMINE IF A CLOSURE ASSESSMENT IS REQUIRED BY REFERRING TO ILHR 10.

1. Individual conducting the assessment has a closure assessment plan (written) which is used as the basis for their work on the site.	☒Y ☐N	☐	☐
2. Do points of obvious contamination exist?	☐Y ☒N	☐	☐
3. Are there strong odors in the soils?	☐Y ☒N	☐	☐
4. Was a field screening instrument used to pre-screen soil sample locations?	☐Y ☒N	☐	☐
5. Was a closure assessment omitted because of obvious contamination?	☐Y ☒N	☐	☐
6. Was the DNR notified of suspected or obvious contamination?	☐Y ☒N	☐	☐

Agency, office and person contacted: _____

7. Contamination suspected because of: ☐Odor ☐Soil Staining ☐Free Product ☐Sheen on Groundwater ☐Field Instrument Test

F. METHOD OF ACHIEVING 10% LEVEL DESCRIPTION

☒Eductor Or Diffused Air Blower
Eductor driven by compressed air, bonded and drop tube left in place; vapors discharged minimum of 12 feet above ground.
Diffused air blower bonded and drop tube removed. Air pressure not exceeding 5 psig.

☐Dry Ice
Dry Ice introduced at 1.5 pounds per 100 gallons of tank capacity. Dry ice crushed and distributed over the greatest possible tank area.
Dry ice evaporated before proceeding.

☐Inert Gas (CO/2 or N/2) **NOTE: INERT GASSES PRODUCE AN OXYGEN DEFICIENT ATMOSPHERE. THE TANK MAY NOT BE ENTERED IN THIS STATE WITHOUT SPECIAL EQUIPMENT.**
Gas introduced through a single opening at a point near the bottom of the tank at the end of the tank opposite the vent.
Gas introduced under low pressure not to exceed 5 psig to reduce static electricity. Gas introducing device grounded.

☐Tank atmosphere monitored for flammable or combustible vapor levels.
Calibrate combustible gas indicator. Drop tube removed prior to checking atmosphere. Tank space monitored at bottom, middle and upper portion of tank. Readings of 10% or less of the lower flammable range (LEL) obtained before removing tank from ground.

The "Q" flag is present when a parameter has been detected below the LOQ. This indicates the results are qualified due to the uncertainty of the parameter concentration between the LOD and the LOQ.

Soil VOC detects are corrected for the total solids, unless otherwise noted.

I certify that the data contained in this Final Report has been generated and reviewed in accordance with approved methods and Laboratory Standard Operating Procedure. Exceptions, if any, are discussed in the accompanying sample narrative. Release of this final report is authorized by Laboratory management, as is verified by the following signature.

LIMITATIONS OF REPORT

1. This Report has been prepared on behalf of and for the exclusive use of the addressee, solely for use in documenting contaminant levels in the vicinity of the borings and/or soil sample locations. This Report and the findings contained herein shall not, in whole or in part, be disseminated or conveyed to any other party, nor used by any other party in whole or in part, without the prior written consent of Fischer Environmental. (FISCHER). However, FISCHER acknowledges and agrees that the Report may be conveyed to government regulatory agencies or to the lending institutions and prospective buyers associated with the sale of the property.

2. The findings and conclusions stated herein must be considered not as scientific certainties, but rather as professional opinions concerning the significance of the limited data gathered during the course of the exploration. No other warranty, expressed or implied, is made. Specifically, FISCHER does not and cannot represent that the site contains no hazardous substances or materials, oil (including petroleum products) or other latent condition beyond that observed by FISCHER during the exploration.

3. The observations described in the Report were made under the conditions stated therein. The conclusions presented in the Report were based solely upon the services described therein, and not on scientific tasks or procedures beyond the scope of the described services. The work described in this Report was carried out in accordance with the terms of FISCHER's Services which accompanied the proposal.

4. In the event that additional information is developed relative to environmental conditions or the presence of hazardous substances at the site and not contained in this Report, such information shall be brought to FISCHER's attention. FISCHER will evaluate such information and, on the basis of this evaluation, may modify the conclusions stated in this Report.

5. The conclusions and recommendations contained in this Report are based in part upon the data obtained from a limited number of soil and/or groundwater samples obtained from widely spaced sampling. The nature and extent of variations between these explorations may not become evident until further exploration. If variations other latent conditions then appear evident, and/or if changes are made in regulations, it will be necessary to reevaluate the conclusions and recommendations of this Report.

6. Quantitative laboratory testing was performed as part of the site assessment by an outside laboratory, FISCHER has relied upon the data provided, and has not conducted an independent evaluation of the reliability to these data.

7. Chemical analyses have been performed for specific parameters during the course of this project as described in the text. However, it should be noted that additional chemical constituents not included in the analysis performed on the samples collected during the assessment may be present in soil and/or groundwater at the site.

Closure Assessment for Underground Storage Tanks

Site Information

Site Name: **E.C. Voit & Sons Concrete**

Site Address: **3450 Milwaukee Street**
Madison, WI 53714

Site Owner/Operator: **E.C. Voit & Sons - Mr. Art Voit**

Owner/Operator Address: **3450 Milwaukee Street**
Madison, WI 53714
(608) 244-0777

Tank(s) Information

DILHR ID#	Tank Type	Capacity (gallons)	Contents	Inventory Form
Applied For	**UST**	**7,000**	**Fuel/Heating Oil**	**Yes**

Briefly give a narrative site description:

The E.C. Voit & Sons concrete facility is located on the north side of Milwaukee Street, just east of the intersection of Milwaukee Street and Fair Oaks Avenue in the City of Madison, Dane County, Wisconsin. The location is in the SE¼ of the NE¼ of Section 5, T7N, R10E, City of Madison, Dane County, Wisconsin (See Figure 1).

The 7,000 gallon underground storage tank (UST) had been used to provide both heat for the building and fuel for concrete operations. The tank was still being used, but based on REA's information, this tank was to be removed and replaced by an above ground storage tank (AST). According to Art Voit (owner), the tank was recently inspected by Tarlton Inspection Inc. (Melissa Tarlton) who indicated the tank was not brought up to 1998 standards and, therefore, would need to be closed by removal by June 30, 2004. A copy of the Tarlton Inspection sheet is attached with this report. The tank was removed on June 29, 2004 by Bomkamp Excavation (retained by owner).

This site assessment report is being submitted to document results of confirmatory samples collected from beneath the tank. Field screening with a flame ionization detector (FID) showed no evidence of a petroleum release. Seven samples were collected for field screening. Six samples recorded 0 meter units and one was at 0.5 meter units suggesting clean non petroleum impacted soil. FID readings above 50 meter units nsually indicate detectable levels of petroleum residues.

Laboratory analysis of the three samples, one collected from each end of the tank and one from the middle, showed no detects for diesel range organics (DRO). There were no petroleum odors and no soil staining. The tank was in good overall condition with some rusting and pitting along the tank seams but no observable holes. According to BCCI personnel, the tank contained approximately 1,400 gallons of fuel, which was removed and placed into 25 fifty five gallon steel drums. There was no water in the tank.

After cleaning the tank, it was disposed at Samuels Recycling Company in Madison, Wisconsin. A copy of the UST disposal destination is attached in this report.

As of September 10, 2004, the 25 fifty five gallon barrels containing the fuel from the tank remain at the site awaiting disposal options. When the fuel is disposed, the documentation will be forwarded to DCOM as an addendum to this report.

Due to site location and land elevation, groundwater began seeping into the UST closure sample boreholes which were collected around two feet below the bottom of the tank. The groundwater appeared clean with no obvious signs of petroleum contamination. At the time of the assessment, the tank bed excavation was dry. After collecting the closure samples, the excavation was backfilled.

See select photographs attached in report.

Briefly describe the past and present property use(s):

Based on information provided by Art Voit, the concrete operations have been in the family business for over 50 years. The tank age is approximately 30 years.

The tank was located approximately 30 feet north of the northwest corner of the facility and was positioned alongside the toe of a steep embankment over 15 feet high (Figure 2).

Briefly describe the history of tank system leaks or repairs:

No known previous tank system leaks have been documented.

FIELD PROCEDURES

Tank Cleaning and Tank Waste Management

Inert/vent methods used? **Tank Vented and inerted using CO2.**

Explosimeter reading?
(An explosimeter reading of 10% or less of the lower flammable range (LEL) should be obtained before removing the tank from the ground.) **Yes as per DILHR Tank Closure Check List**

Contaminated Soils and Excavation Water:

How were contaminated soils managed? **na**

How was water within the excavation(s) managed? **na**

Field Screening:

Performed by: **Resource Engineering Associates, Inc.**

Briefly describe equipment and procedure used.
A flame ionization detector was used to measure soil volatile organic vapors. Soil samples were collected and placed in 8 ounce glass jars covered with foil. The samples were left standing about 15 minutes and then a reading was measured and recorded. See Table 1 for FID data collected.

SOIL SAMPLING

Soil sampling performed? **Yes**
Did obvious evidence of petroleum residues exist? **No**
If yes, briefly describe sampling equipment and methods used:

Soil samples were collected by hand using a hand auger. Each sample was collected from a designated location and depth.

Soil sampling performed by: **Sean Barry**
Certified Person and Certification no. **41945**

1.) Was soil sampled at points where strong odors or soil discolorations existed? **No odors or discoloration existed.**

2.) Was soil sampled in native soil one to 3 feet beneath the bottom of each end of each tank? **Yes**

3.) Was soil sampled in the native soil one to 3 feet beneath the surface underneath each island on the supply side of the tank? **na**

4.) Was soil sampled in native soil one to 3 feet beneath the surface every 20 feet, or segment thereof, along piping runs? **na**

If yes, were any soil samples collected at:
swing joint? **na**
flex connector? **na**
pipe elbow? **na**
fill pipe? **na**

If yes, what depth was the fill pipe sample collected? (up to 5 feet allowable): **na**

* See attached soil sampling Table of Results and Laboratory Analytical Report/COC **yes**

WATER SAMPLING
Was the water table found within the tank or piping? **Yes. The tank bed was dry, but after advancing hand augers beneath the tank for closure sample collection, groundwater began to seep into the boreholes. Closure soil samples collected represented soil near the smear or saturated zone.** If yes, were soil samples collected at the sidewalls of the excavation at: tank ends? **na** island supply side of the tank? **na** every 20 feet, or segment thereof, along piping runs? **na**
Was water removed from the excavation? **No** If yes, how much was removed and where was it disposed? **na**
Was the water laboratory evaluated? **na** What laboratory was used? **na**

SITE CLOSURE DOCUMENTATION
Was there obvious contamination? **No** Who at the Department of Natural Resources was notified? **NA** When was the notification given? **NA**
A copy of this report should be forwarded to the Wisconsin Department of Natural Resources (WDNR) at the following address: **WDNR - South Central District** **3911 Fish Hatchery Road** **Madison, WI 53711** **A copy of this report, along with the Tank Closure Report form, CHECKLIST FOR UNDERGROUND TANK CLOSURE SBD-8951 should be forwarded to the Wisconsin Department of Commerce (DCOM) to document removal procedures. Tank inventory forms SBD-7437 should be completed and forwarded to DCOM to register the tank as closed by removal. We understand that Inspector Peterson will be forwarding the SBD-8951 and SBD-7437s to DCOM. The address for DCOM is:** **DCOM** **Safety & Buildings Division** **Fire Prevention & UST Section** **P.O. Box 7838** **Madison, WI 53707-7838**

KEY TO DATA FLAGS

The attached sample(s) may have a result flag shown on the report. The following are the result flag definitions:

A = Analyzed/extracted past hold time
B = Blank is contaminated
C = Standard outside of control limits
D = Diluted for analysis
E = TCLP extraction outside of method required temperature range
F = Sample filtered in lab
G = Received past hold time
H = Late eluting hydrocarbons present
I = Improperly handled sample
J = Estimated concentration
L = Common lab solvent
M = Matrix interference
P = Improperly preserved sample
Q = Result confirmed via re-analysis
S = Sediment present
T = Does not match typical pattern
W = BOD re-set due to missed dilution
X = Unidentified compound(s) present
Z = Internal standard outside limits
* = See Case Narrative

KEY TO ANALYST INITIALS

The attached sample(s) may have been analyzed by another certified laboratory. If a number appears in the Analyst Initials field, the following are the appropriate certifications (if the lab code does not appear below, that means that certification is not required for the work performed):

Lab Code	Certification Number
008	WDNR - 999766900
009	WDNR - 241293690
020	WDNR - 999447680
030	ILNELAC - 100230; WDNR - 998294430
060	ILNELAC - 100221; WDNR - 999447130
070	IA - 007; ILNELAC - 000668; MDH - 019-999-319; WDNR - 999917270
130	WDNR - 632021390
147	WDNR - 721026460
300	FLNELAC - 87358; IA - 131; MDH - 047-999-345; WDNR - 998020430
400	WDNR - 113133790
510	WDNR - 241249360
520	WDNR - 999518190; ILNELAC - 100439
700	WDNR - 113289110

TestAmerica Watertown Certifications: WI DNR - 128053530; IL NELAC - 100453; IA DNR - 294; MN DoH - 055-999-366; ND DoH R-046; AR DEQ - 88-0808

Unless sub-contracted (see above), volatiles analyses (including VOC, PVOC, GRO, BTEX and TPH Gasoline) performed by TestAmerica Watertown at 1101 Industrial Drive, Units 9&10. All other analyses performed at 602 Commerce Drive, Watertown WI 53094.

Results reported between the Method Detection Limit (MDL) and Limit of Quantitation (LOQ) are less certain than results at or above the LOQ.

For questions regarding this report, please contact Dan Milewsky or Warren Topel.

TANK CLOSURE REPORT FORM SBD 8951
&
TANK INVENTORY FORM SBD-7437

Wisconsin Department of Industry, Labor and Human Relations

For Office Use Only:
Tank ID #

UNDERGROUND PETROLEUM PRODUCT TANK INVENTORY

Information Required By Sec. 102.142, Wis. Stats.

Send Completed Form To:
Safety & Buildings Division
P.O. Box 7969
Madison, WI 53707
Telephone: (608) 267-5280

Underground tanks in Wisconsin that have stored or currently store petroleum or regulated substances must be registered. Please see the reverse side for additional information on this program. An underground storage tank is defined as any tank with at least 10 percent of its total volume (included piping) located below ground level. A separate form is needed for each tank. Send each completed form to the agency designated in the top right corner. Have you previously registered this tank by submitting a form? ☐ YES ☐ NO If yes, are you correcting/updating information only? ☐ Yes ☐ No

The information you provide may be used by other government agency programs (Privacy Law, s. 15.04 (1) (m)). REMOVAL

This registration applies to a tank that is (check one):
1A. ☐ In Use or 1B. ☐ Newly Installed
2. ☐ Abandoned With Product
3. ☐ Abandoned No Product (empty) or With Water
4. ☒ Closed - Tank Removed
6. ☐ Closed - Filled With Inert Material
7. ☐ Out of Service - Provide Date: _____
8. ☐ Changed Ownership (Indicate new owner below)

Fire Department Providing Fire Coverage Where Tank Located: MADISON F/D.

A. IDENTIFICATION: (Please Print)

1. Tank Site Name: E.C. Voit TANK REMOVAL | Site Address: 3450 Milwaukee St | Site Telephone No.: 608-244-0771
☒ City ☐ Village ☐ Town of: MADISON | State: WI | Zip Code: 53714 | County: DANE

2. Owner Name (mail sent here unless indicated otherwise in #3 below): ART VOIT | Owner Mailing Address (mail sent here unless indicated otherwise in #3): 3450 Milwaukee ST
☒ City ☐ Village ☐ Town of: MADISON | State: WI | Zip Code: 53714 | County: DANE

3. Alternate Mailing Name If Different Than #2 | Alternate Mailing Street Address If Different From #2
☐ City ☐ Village ☐ Town of: | State | Zip Code | County

4. Tank Age (date installed, if known: or years old): 30 YRS + | 5. Tank Capacity (gallons): 7000 gal | 6. Tank Manufacturer's Name (if known): UNKNOWN

B. TYPE OF USER (check one):
1. ☐ Gas Station 2. ☐ Bulk Storage 3. ☐ Utility 4. ☒ Mercantile
5. ☐ Industrial 6. ☐ Government 7. ☐ School 8. ☐ Residential
9. ☐ Agricultural 10. ☐ Other (specify): _____

C. TANK CONSTRUCTION:
1. ☒ Bare Steel 2. ☐ Cathodically Protected and Coated Steel (A. ☐ Sacrificial Anodes or B. ☐ Impressed Current)
3. ☐ Coated Steel 4. ☐ Fiberglass 5. ☐ Other (specify): _____
6. ☐ Relined - Date _____ 7. ☐ Steel - Fiberglass Reinforced Plastic Composite 9. ☐ Unknown

Approval: 1. ☐ Nat'l Std. 2. ☐ UL 3. ☐ Other: UNKNOWN | Is Tank Double Walled? ☐ Yes ☒ No
Overfill Protection Provided? ☐ Yes ☒ No If yes, identify type: | Spill Containment? ☐ Yes ☒ No

Tank leak detection method: 1. ☐ Automatic tank gauging 2. ☐ Vapor monitoring 3. ☐ Groundwater monitoring 4. ☐ Inventory control and tightness testing 5. ☐ Interstitial monitoring 6. ☒ Not required by law at NONE 7. ☐ Manual Tank Gauging (only for tanks of 1,000 gallons or less)

D. PIPING CONSTRUCTION
1. ☒ Bare Steel 2. ☐ Cathodically Protected and Coated or Wrapped Steel (A. ☐ Sacrificial Anodes or B. ☐ Impressed Current) 3. ☐ Coated Steel
4. ☐ Fiberglass 5. ☐ Other (specify): _____ 9. ☐ Unknown

Piping System Type: 1. ☐ Pressurized piping with: A. ☐ auto shutoff; B. ☐ alarm; or C. ☐ flow restrictor 2. ☒ Suction piping with check valve at tank
3. ☐ Suction piping with check valve at pump and inspectable

Piping leak detection method: used if pressurized or check valve at tank: 1. ☐ Vapor monitoring 2. ☐ Interstitial monitoring
3. ☐ Groundwater monitoring 4. ☐ Tightness testing 5. ☐ Line Leak Detector 6. ☐ Not Required NONE

Approval: 1. ☐ Nat'l Std 2. ☐ UL 3. ☐ Other: UNKNOWN | Double Walled: ☐ Yes ☒ No

E. TANK CONTENTS
1. ☐ Diesel 2. ☐ Leaded 3. ☐ Unleaded 4. ☒ Fuel Oil
5. ☐ Gasohol 6. ☐ Other 7. ☐ Empty 8. ☐ Sand/Gravel/Slurry
9. ☐ Unknown 10. ☐ Premix 11. ☐ Waste Oil 12. ☐ Propane
13. ☐ Chemical * _____ _____ _____ 14. ☐ Kerosene 15. ☐ Aviation

* If # 13 is checked, indicate the chemical name(s) or number(s) of the chemical or waste.

If Tank Closed, Give Date (mo/day/yr): June 30 2004 | Has a site assessment been completed? (see reverse side for details) ☒ Yes ☐ No

If installation of a new tank is being reported, indicate who performed the installation inspection:
1. ☐ Fire Department 2. ☐ DILHR 3. ☐ Other (identify) _____

Name of Owner or Operator (please print): ART VOIT SR. | Indicate Whether: ☒ Owner or ☐ Operator

Signature of Owner or Operator: Arthur J. Voit | Date Signed: 06-30-2004

SBD-7437 (R. 05/94)

IMPORTANT: Complete as many items on this form as possible. Failure to provide sufficient information may cause you to fall under additional regulations.

Complete one form for each site closure.

5. Fill pipes, gauge pipes, vapor recovery connections, submersible pumps and other fixtures removed.	☐Y	☐N	☐	☑
NOTE: DROP TUBE SHOULD NOT BE REMOVED IF THE TANK IS TO BE PURGED THROUGH THE USE OF AN EDUCTOR - EDUCTOR OUTPUT 12 FT. ABOVE GRADE.				
6. Vent lines left connected until tanks purged.	☐Y	☐N	☐	☑
7. Tank openings temporarily plugged so vapors exit through vent.	☐Y	☐N	☐	☑
8. Tank atmosphere reduced to 10% of the lower flammable range (LEL) see Section F.	☐Y	☐N	☐	☑
9. Tank properly cleaned to remove all sludge and residue.	☐Y	☐N	☐	☑
10. Solid inert material (sand, cyclone boiler slag, pea gravel recommended) introduced and tank filled.	☐Y	☐N	☐	☑
11. Vent line disconnected or removed.	☐Y	☐N	☐	☑
12. Inventory form filed by owner with the Department of Commerce indicating closure in place.	☐Y	☐N	☐	☑

E. CLOSURE ASSESSMENTS

NOTE: DETERMINE IF A CLOSURE ASSESSMENT IS REQUIRED BY REFERRING TO COMM 10.

1. Individual conducting the assessment has a closure assessment plan (written) which is used as the basis for their work on the site.	☑Y	☐N	☐	☐
2. Do points of obvious contamination exist?	☐Y	☑N	☑ SKB	☐
3. Are there strong odors in the soils?	☐Y	☑N	☑ SKB	☐
4. Was a field screening instrument used to pre-screen soil sample locations?	☐Y	☑N	☑ SKB	☐
5. Was a closure assessment omitted because of obvious contamination?	☐Y	☑N	☑ SKB	☐
6. Was the DNR notified of suspected or obvious contamination?	☐Y	☑N	☑ SKB	☑

Agency, office and person contacted: _____

7. Contamination suspected because of: ☐Odor ☐Soil Staining ☐Free Product ☐Sheen on Groundwater ☐Field Instrument Test

F. METHOD OF ACHIEVING 10% LEVEL DESCRIPTION

☐Eductor Or Diffused Air Blower
Eductor driven by compressed air, bonded and drop tube left in place; vapors discharged minimum of 12 feet above ground. Diffused air blower bonded and drop tube removed. Air pressure not exceeding 5 psig.

☐Dry Ice
Dry Ice introduced at 1.5 pounds per 100 gallons of tank capacity. Dry ice crushed and distributed over the greatest possible tank area. Dry ice evaporated before proceeding.

☑Inert Gas (CO/2 or N/2) NOTE: INERT GASSES PRODUCE AN OXYGEN DEFICIENT ATMOSPHERE. THE TANK MAY NOT BE ENTERED IN THIS STATE WITHOUT SPECIAL EQUIPMENT.
Gas introduced through a single opening at a point near the bottom of the tank at the end of the tank opposite the vent. Gas introduced under low pressure not to exceed 5 psig to reduce static electricity. Gas introducing device grounded.

☑Tank atmosphere monitored for flammable or combustible vapor levels.
Calibrate combustible gas indicator. Drop tube removed prior to checking atmosphere. Tank space monitored at bottom, middle and upper portion of tank. Readings of 10% or less of the lower flammable range (LEL) obtained before removing tank from ground.

Re: Customer ID: 41945
Examination for Site Assessor Certification

Congratulations, you have passed all examination requirements for the credential listed in the regarding line above.

To obtain this credential send a check for $50.00 and a copy of this letter to the address listed above. Make checks payable to Department of Commerce. The credential fee has been prorated to reflect a portion of the entire credential fee if the credential expires on a specific date. If the credential fee is not received by the department within three months of this notice, the department will require the applicant to submit a new application and retake the exam.

Upon receipt of the credential fee, the credential card will be mailed to you within 15 business days. If you need the credential immediately, please call the Environmental & Regulatory Services Division at 201 W. Washington Ave, Third Floor in Madison Wisconsin between the business hours of 7:45 a.m. and 4:30 p.m.

Please refer to your initial application or chapter Comm 5 for detailed information about renewal and/or continuing education requirements. A renewal notice will be mailed to the last address the department has on file for you, at least 30 days prior to your renewal date.

Please notify the Credential Analyst of changes in name, address and phone number to ensure proper delivery of future mail. Mailings sent from this office and not forwarded to a current address are not the responsibility of the department.

If you have any questions, please call (608) 266-7874.

Inspection Summary:

- ☐ No violations noted.
- ☐ Violations are noted and corrections were made immediately.
- ☐ Discrepancies are noted and instructions for correction are provided.

Blooming Grove
7000 Gallon Boiler Tank
for Heating water

- ☒ Violations are noted and this is an Administrative Order requiring compliance. *Administrative Order # 72.72704

*This Department order is issued as a result of an inspection conducted for the items listed on this report. You are hereby ordered to have the listed violations corrected to conform to the indicated administrative codes or statutory requirements. These violations must be corrected by the compliance date indicated and the inspector who signed the report must be notified in writing of the corrective actions taken and to request a re-inspection. If you fail to comply, this order is enforceable in circuit court pursuant to s. 101.021(13), Stats., with forfeitures ranging from $10 to $100 per day for each violation. In addition, the Department may attach a notice of violation to the deed for the property on which the violations occur. Failure to comply with this order may result in the subject tank system Red-tagged for non-compliance and prohibited from being operated until the department has verified code compliance.

ISPC #	Code Section & Non-Compliance Items	Compliance Date
	Tank not brought to 1998 standards	
	-No overfill protection	
	-No spill protection	
	- No Leak detection since 1998	
	- No CP protection	
	Tank must be removed by June 30, 2004 or have	June 30, 04
	a WI certified Installer submit plans by June 30, 2004	
	to Dept. of Commerce to bring the system up to code	

Note:

Agency: 72

Notice of Appeal Rights: You may file a written request for a hearing to contest issuance of an Administrative Order, or any of its terms, with the Department within 15 calendar days after the date of an Administrative Order. All hearing requests shall be filed either by delivery to the office of the Division Administrator, Environmental and Regulatory Services Division, 201 W. Washington Avenue, Madison, Wisconsin, or by certified mail addressed to the Division Administrator, Environmental and Regulatory Services Division P.O. Box 14427, Madison, WI 53708-0427. If a hearing is requested, an Administrative Order shall not become effective until the administrative law judge has issued a decision affirming or modifying the order. This notice is provided pursuant to s. 227.48(2), Wis. Stats.

Job Order No. (if appl)	Time of Spill	Date of Spill
632-3800-ER1	12:37:00 PM	06/22/2009

Cause of Spill/Corrective Action/Date & Time Completed

Cause of Spill:	Crew responding to a call from the property owner discovered the pole snapped off approximately four feet above ground level with the remainder of the pole and the three phase transformer bank laying on the ground approximately twenty feet south east of the pole location
Corrective Action:	The PCB contaminated dirt and vegetative matter were dug up to one foot horizontally past the seven foot diameter contaminated dirt and vegetetive matter area and one foot verticelly past the three inch contamination depth; containerized and removed from the site. Absorbents used to remove visible sheen from the small amount of water accumulating in two heavy equipment tracks running fifteen feet north north east of the downed equipment were containerized and removed from the site. All containers were brought to CSC, then to the PCB Storage Facility at the Transformer Shop, 827 East Main Street Madison WI for disposal in accordance with standard procedures.The transformers and all equipment were no longer in use and removed from the site for disposal in accordance with standard procedures.
Date Completed:	06/22/2009

PCB SPILL CLEANUP CERTIFICATION

Please route to:
- [x] M. Ricciardi
- [ ] C. Fenrick

Identification of the source of the spill (e.g. type of equipment)

E.C. Voit and Sons, 3450 Milwaukee Street, Madison, WI

Three phase transformer bank consisting of three 25kva single phase pole type transformers on pole 26Y3-A4

General Electric s/n 221504A, 221509, 254567

Estimated or actual date and time of the spill

Crew responded to a call from the property owner received by MGE 12:37PM 06/22/2009.

Date and time cleanup was completed/terminated

06/22/2009 5:00 PM

If cleanup was delayed by emergency or adverse weather, please explain nature of this delay

Crew responded to a call from the property owner received by MGE 12:37PM 06/22/2009 and discovered the pole and three phase transformer bank laying on the ground.

The property owner indicates the pole came down during the storms Thursday night, June 18, 2009.

Note: This equipment was de-energized at the time of damage.

Description of the spill location

Pole 26Y3-A4 snapped off approximately four feet above ground level with the remainder of the pole and the three phase transformer bank laying on the ground approximately twenty feet south east of the pole location. A sheen was visible on the small amount of water accumulating in two heavy equipment tracks running fifteen feet north north east of the downed equipment

Methodology used to establish spill boundaries

Visual and odor inspection of impacted site, dirt, and vegetative matter.

Description of solid surfaces cleaned and of the double wash/rinse method used

Not Applicable

Approximate depth of soil excavation and the amount of soil removed

Eight foot diameter excavation, fifteen inches deep. Resulted in 10 - 55 gallon steel drums of material removed from site

Additional pre- and post-cleanup sampling

TJH2b PCB analysis;12/07/2001; sample numbers 10006, 10008, 10007; s/n 221504A 153 ppm PCB, 221509 148 ppm PCB, 254567 164 ppm PCB

Estimated cost of cleanup by man hours or by dollars

Unloaded labor and truck time @ $2055; disposal $12,333

I certify that the cleanup requirements in 40 CFR Part 761 Subpart G have been met and that the information contained in the record is true to the best of my knowledge.

Dino -

Two items:

Please let me know if you cannot open this attachment, because I seem to be having problems with it.
My supervisor, Mike Ricciardi, received an email (included in this pdf) that instructed him to enter additional information on the SERTS System. The SERTS number is 20090614SC13-1. I cannot even figure out how to get to the SERTS system, so the information was not updated on that system. Please let me know if you would like me to follow up that system - and how to actually access it.

Thanks,

Jeanne,

Jeanne Burns-Frank

Liability Notice....117

The ERIS ***Physical Setting Report - PSR*** provides comprehensive information about the physical setting around a site and includes a complete overview of topography and surface topology, in addition to hydrologic, geologic and soil characteristics. The location and detailed attributes of oil and gas wells, water wells, public water systems and radon are also included for review.

The compilation of both physical characteristics of a site and additional attribute data is useful in assessing the impact of migration of contaminants and subsequent impact on soils and groundwater.

Disclaimer

This Report does not provide a full environmental evaluation for the site or adjacent properties. Please see the terms and disclaimer at the end of the Report for greater detail.

Soil Information

The previous page shows a soil map using SSURGO data from USDA Natural Resources Conservation Service. Detailed information about each unit is provided below.

Map Unit Ad

Map Unit Name:	Adrian muck
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	0cm
Drainage Class - Dominant:	Very poorly drained
Hydrologic Group - Dominant:	A/D - These soils have low runoff potential when drained and high runoff potential when undrained.
Major components are printed below	
Adrian(100%)	
horizon Oa(0cm to 89cm)	Muck
horizon H2(89cm to 152cm)	Sand

Map Unit BbB

Map Unit Name:	Batavia silt loam, gravelly substratum, 2 to 6 percent slopes
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	B - Soils in this group have moderately low runoff potential when thoroughly wet. Water transmission through the soil is unimpeded.
Major components are printed below	
Batavia(100%)	
horizon H1(0cm to 25cm)	Silt loam
horizon H2(25cm to 112cm)	Silty clay loam
horizon H3(112cm to 127cm)	Gravelly clay loam
horizon H4(127cm to 152cm)	Gravelly coarse sand

Map Unit Co

Map Unit Name:	Colwood silt loam, 0 to 2 percent slopes
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	0cm
Drainage Class - Dominant:	Poorly drained
Hydrologic Group - Dominant:	C/D - These soils have moderately high runoff potential when drained and high runoff potential when undrained.
Major components are printed below	
Colwood(85%)	
horizon Ap(0cm to 25cm)	Silt loam
horizon Bg(25cm to 61cm)	Sandy clay loam
horizon 2Cg(61cm to 200cm)	Stratified very fine sand to silt

Map Unit Cu

Soil Information

Map Unit Name:	Cut and fill land
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	107cm
Drainage Class - Dominant:	Moderately well drained
Hydrologic Group - Dominant:	null
Major components are printed below	
Cut and fill land(100%)	
horizon H1(0cm to 25cm)	Variable

Map Unit DnB

Map Unit Name:	Dodge silt loam, 2 to 6 percent slopes
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	B - Soils in this group have moderately low runoff potential when thoroughly wet. Water transmission through the soil is unimpeded.
Major components are printed below	
Dodge(100%)	
horizon H1(0cm to 23cm)	Silt loam
horizon H2(23cm to 74cm)	Silty clay loam
horizon H3(74cm to 102cm)	Clay loam
horizon H4(102cm to 152cm)	Loam

Map Unit DnC2

Map Unit Name:	Dodge silt loam, 6 to 12 percent slopes, eroded
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	B - Soils in this group have moderately low runoff potential when thoroughly wet. Water transmission through the soil is unimpeded.
Major components are printed below	
Dodge(100%)	
horizon H1(0cm to 23cm)	Silt loam
horizon H2(23cm to 74cm)	Silty clay loam
horizon H3(74cm to 102cm)	Clay loam
horizon H4(102cm to 152cm)	Gravelly loam

Map Unit DsB

Map Unit Name:	Dresden silt loam, 2 to 6 percent slopes
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	B - Soils in this group have moderately low runoff potential when thoroughly wet. Water transmission through the soil is unimpeded.
Major components are printed below	
Dresden(100%)	

horizon H1(0cm to 36cm)	Silt loam
horizon H2(36cm to 64cm)	Silty clay loam
horizon H3(64cm to 91cm)	Sandy clay loam
horizon H4(91cm to 152cm)	Sand and gravel, gravelly coarse sand

Map Unit DsC2

Map Unit Name:	Dresden silt loam, 6 to 12 percent slopes, eroded
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	B - Soils in this group have moderately low runoff potential when thoroughly wet. Water transmission through the soil is unimpeded.
Major components are printed below	
Dresden(100%)	
horizon H1(0cm to 36cm)	Silt loam
horizon H2(36cm to 64cm)	Silty clay loam
horizon H3(64cm to 91cm)	Sandy clay loam
horizon H4(91cm to 152cm)	Gravelly coarse sand

Map Unit GP

Map Unit Name:	Gravel pit
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	null
Hydrologic Group - Dominant:	null
Major components are printed below	
Pits(99%)	
horizon H1(0cm to 25cm)	Stratified extremely gravelly coarse sand to very gravelly sand

Map Unit GsC2

Map Unit Name:	Grays silt loam, 6 to 12 percent slopes, eroded
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	B - Soils in this group have moderately low runoff potential when thoroughly wet. Water transmission through the soil is unimpeded.
Major components are printed below	
Grays(100%)	
horizon H1(0cm to 25cm)	Silt loam
horizon H2(25cm to 84cm)	Silty clay loam
horizon H3(84cm to 152cm)	Stratified very fine sandy loam to silt loam

Map Unit Ho

Map Unit Name:	Houghton muck

Soil Information

Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	0cm
Drainage Class - Dominant:	Very poorly drained

Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	B - Soils in this group have moderately low runoff potential when thoroughly wet. Water transmission through the soil is unimpeded.
Major components are printed below	
McHenry(100%)	
horizon H1(0cm to 18cm)	Silt loam
horizon H2(18cm to 46cm)	Silty clay loam
horizon H3(46cm to 84cm)	Sandy clay loam
horizon H4(84cm to 152cm)	Fine sandy loam

Map Unit MdD2

Map Unit Name:	McHenry silt loam, 12 to 20 percent slopes, eroded
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	B - Soils in this group have moderately low runoff potential when thoroughly wet. Water transmission through the soil is unimpeded.
Major components are printed below	

McHenry(100%)

horizon H1(0cm to 18cm)	Silt loam
horizon H2(18cm to 46cm)	Silty clay loam
horizon H3(46cm to 84cm)	Sandy clay loam
horizon H4(84cm to 152cm)	Fine sandy loam

Map Unit PnA

Map Unit Name:	Plano silt loam, till substratum, 0 to 2 percent slopes
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	B - Soils in this group have moderately low runoff potential when thoroughly wet. Water transmission through the soil is unimpeded.

Major components are printed below

Plano(90%)

horizon Ap(0cm to 28cm)	Silt loam
horizon Bt1(28cm to 104cm)	Silty clay loam
horizon 2Bt2(104cm to 117cm)	Loam
horizon 2C(117cm to 200cm)	Sandy loam

Map Unit PnB

Map Unit Name:	Plano silt loam, till substratum, 2 to 6 percent slopes
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	B - Soils in this group have moderately low runoff potential when thoroughly wet. Water transmission through the soil is unimpeded.

Major components are printed below

Plano(85%)

horizon Ap(0cm to 28cm)	Silt loam
horizon Bt1(28cm to 104cm)	Silty clay loam
horizon 2Bt2(104cm to 117cm)	Loam
horizon 2C(117cm to 200cm)	Sandy loam

Map Unit RnB

Map Unit Name:	Ringwood silt loam, 2 to 6 percent slopes
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	B - Soils in this group have moderately low runoff potential when thoroughly wet. Water transmission through the soil is unimpeded.

Major components are printed below

Ringwood(100%)

horizon H1(0cm to 30cm)	Silt loam
horizon H2(30cm to 56cm)	Silty clay loam
horizon H3(56cm to 91cm)	Sandy clay loam

horizon H4(91cm to 152cm)	Sandy loam

Map Unit ScA

Map Unit Name:	St. Charles silt loam, 0 to 2 percent slopes
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	B - Soils in this group have moderately low runoff potential when thoroughly wet. Water transmission through the soil is unimpeded.
Major components are printed below	
St. Charles(90%)	
horizon Ap(0cm to 30cm)	Silt loam
horizon Bt1(30cm to 122cm)	Silt loam
horizon 2Bt2(122cm to 137cm)	Sandy loam
horizon 2C(137cm to 200cm)	Gravelly sandy loam

Map Unit ScB

Map Unit Name:	St. Charles silt loam, 2 to 6 percent slopes
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	B - Soils in this group have moderately low runoff potential when thoroughly wet. Water transmission through the soil is unimpeded.
Major components are printed below	
St. Charles(85%)	
horizon Ap(0cm to 23cm)	Silt loam
horizon Bt1(23cm to 122cm)	Silt loam
horizon 2Bt2(122cm to 137cm)	Sandy loam
horizon 2C(137cm to 200cm)	Gravelly sandy loam

Map Unit VwA

Map Unit Name:	Virgil silt loam, gravelly substratum, 0 to 3 percent slopes
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	61cm
Drainage Class - Dominant:	Somewhat poorly drained
Hydrologic Group - Dominant:	C - Soils in this group have moderately high runoff potential when thoroughly wet. Water transmission through the soil is somewhat restricted.
Major components are printed below	
Virgil(100%)	
horizon H1(0cm to 23cm)	Silt loam
horizon H2(23cm to 38cm)	Silt loam
horizon H3(38cm to 130cm)	Silty clay loam
horizon H4(130cm to 142cm)	Sandy clay loam
horizon H5(142cm to 152cm)	Gravelly coarse sand

Soil Information

Map Unit W

Map Unit Name:	Water

No more attributes available for this map unit

Map Unit Wa

Map Unit Name:	Wacousta silty clay loam, 0 to 2 percent slopes
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	0cm
Drainage Class - Dominant:	Very poorly drained
Hydrologic Group - Dominant:	B/D - These soils have moderately low runoff potential when drained and high runoff potential when undrained.

Major components are printed below

Wacousta(85%)

horizon Ap(0cm to 33cm)	Silty clay loam
horizon Bg(33cm to 48cm)	Silty clay loam
horizon Cg(48cm to 200cm)	Silt loam

Radon Information

This section lists any relevant radon information found for the target property.

Federal EPA Radon Zone for *DANE* County: **1**

Zone 1: Counties with predicted average indoor radon screening levels greater than 4 pCi/L
Zone 2: Counties with predicted average indoor radon screening levels from 2 to 4 pCi/L
Zone 3: Counties with predicted average indoor radon screening levels less than 2 pCi/L

Federal Area Radon Information for *DANE* County

No Measures/Homes:	87
Geometric Mean:	2
Arithmetic Mean:	3.2
Median:	2.2
Standard Deviation:	2.9
Maximum:	12.9
% >4 pCi/L:	25
% >20 pCi/L:	0
Notes on Data Table:	TABLE 1. Screening indoor radon data from the State/EPA Residential Radon Survey of Wisconsin conducted during 1986-87. Data represent 2-7 day charcoal canister measurements from the lowest level of each home tested.

Appendix

Federal Sources

FEMA National Flood Hazard Layer — **FEMA FLOOD**

The National Flood Hazard Layer (NFHL) data incorporates Flood Insurance Rate Map (FIRM) databases published by the Federal Emergency Management Agency (FEMA), and any Letters Of Map Revision (LOMRs) that have been issued against those databases since their publication date. The FIRM Database is the digital, geospatial version of the flood hazard information shown on the published paper FIRMs. The FIRM Database depicts flood risk information and supporting data used to develop the risk data. The FIRM Database is derived from Flood Insurance Studies (FISs), previously published FIRMs, flood hazard analyses performed in support of the FISs and FIRMs, and new mapping data, where available.

Indoor Radon Data — **INDOOR RADON**

Indoor radon measurements tracked by the Environmental Protection Agency(EPA) and the State Residential Radon Survey.

Public Water Systems Violations and Enforcement Data — **PWSV**

List of drinking water violations and enforcement actions from the Safe Drinking Water Information System (SDWIS) made available by the Drinking Water Protection Division of the US EPA's Office of Groundwater and Drinking Water. Enforcement sensitive actions are not included in the data released by the EPA. Address information provided in SWDIS may correspond either with the physical location of the water system, or with a contact address.

Radon Zone Level — **RADON ZONE**

Areas showing the level of Radon Zones (level 1, 2 or 3) by county. This data is maintained by the Environmental Protection Agency (EPA).

Safe Drinking Water Information System (SDWIS) — **SDWIS**

The Safe Drinking Water Information System (SDWIS) contains information about public water systems as reported to US Environmental Protection Agency (EPA) by the states. Addresses may correspond with the location of the water system, or with a contact address.

Soil Survey Geographic database — **SSURGO**

The Soil Survey Geographic database (SSURGO) contains information about soil as collected by the National Cooperative Soil Survey at the Natural Resources Conservation Service (NRCS). Soil maps outline areas called map units. The map units are linked to soil properties in a database. Each map unit may contain one to three major components and some minor components.

U.S. Fish & Wildlife Service Wetland Data — **US WETLAND**

The U.S. Fish & Wildlife Service Wetland layer represents the approximate location and type of wetlands and deepwater habitats in the United States.

USGS Current Topo — **US TOPO**

US Topo topographic maps are produced by the National Geospatial Program of the U.S. Geological Survey (USGS). The project was launched in late 2009, and the term "US Topo" refers specifically to quadrangle topographic maps published in 2009 and later.

USGS Geology — **US GEOLOGY**

Seamless maps depicting geological information provided by the United States Geological Survey (USGS).

USGS National Water Information System — **FED USGS**

The U.S. Geological Survey (USGS)'s National Water Information System (NWIS) is the nation's principal repository of water resources data. This database includes comprehensive information of well-construction details, time-series data for gage height, streamflow, groundwater level, and precipitation and water use data.

State Sources

Oil and Gas Wells — **OGW**

As of WI state regulatory agencies, FracTracker Alliance - state of South Wisconsin confirmed not to have

any active (drilled but not plugged) oil and gas wells.

Public Water Supply Systems **PWS**

The Department of Natural Resources, Bureau of Drinking Water and Groundwater maintains data about Wisconsin's drinking water and groundwater quality. The Bureau's Drinking Water System is to enforce the Safe Drinking Water Act (SDWA) regulations covering Public Water Systems (PWS).

Well Construction Report **PRIVATE WW**

This is the list of Private Water Well data, maintained by Wisconsin Department of Natural Resources (DNR). The Data contains the private wells drilled for drinking water use, during 1988 to present.

Well Inventory **WELL**

Groundwater Retrieval Network (GRN) database contains the list of well data, maintained by Wisconsin Department of Natural Resources. The Data covers the period from the early 1970s to present for the Public Water Supply data; 1988 to present for the Private Water Supply data; from the mid 1970s to present for the GEMS database; and from the mid 1970s to present for the SWAMP system.

Liability Notice

Reliance on information in Report: The Physical Setting Report (PSR) DOES NOT replace a full Phase I Environmental Site Assessment but is solely intended to be used as a review of environmental databases and physical characteristics for the site or adjacent properties.

License for use of information in Report: No page of this report can be used without this cover page, this notice and the project property identifier. The information in Report(s) may not be modified or re-sold.

Your Liability for misuse: Using this Service and/or its reports in a manner contrary to this Notice or your agreement will be in breach of copyright and contract and ERIS may obtain damages for such mis-use, including damages caused to third parties, and gives ERIS the right to terminate your account, rescind your license to any previous reports and to bar you from future use of the Service.

No warranty of Accuracy or Liability for ERIS: The information contained in this report has been produced by ERIS Information Inc. ("ERIS") using various sources of information, including information provided by Federal and State government departments. The report applies only to the address and up to the date specified on the cover of this report, and any alterations or deviation from this description will require a new report. This report and the data contained herein does not purport to be and does not constitute a guarantee of the accuracy of the information contained herein and does not constitute a legal opinion nor medical advice. Action Information

Action Date: 09/24/2004
Action Code: 33
Action Name: Tank Closure Environmental Site Assessment Rpt Received
Action Desc: Date that the DNR received an Environmental Site Assessment of a tank system (above-ground or underground) for tank closure or change in services which usually includes sample results.
Action Comment:

Action Date: 10/17/2005

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB

Action Code: 801
Action Name: No Detect or Insignificant Contamination
Action Desc: No site investigation required. Laboratory results indicate no detect to low level contamination from a Phase II Environmental Site Assessment or similar report as well as UST/AST storage tank closures.
Action Comment:

Action Date: 10/17/2005
Action Code: 1
Action Name: Notification
Action Desc: Date the DNR is notified of the discovery of potential contamination which was later found to be non-existent or below reportable quantity.
Action Comment:

Action Desc: Date updates on progress are received. Can be 30, 60, 90 days or other interval.
Action Comment: BIDS RECEIVED

Action Date: 12/27/2005
Action Code: 56
Action Name: Continuing Obligation(s) Required - GIS Registry Site
Action Desc: Closure or ongoing cleanup was approved with one or more requirements: to give notice of residual contamination; require or restrict certain actions to protect the public or environment; minimize human or environmental exposures. Site conditions merit placement on the GIS registryÂ©Â©Â©
Action Comment: AUTO-POPULATED AS REPLACEMENT FOR CODE 50

Action Date: 04/17/2003
Action Code: 40
Action Name: Remedial Action Options Report Approved
Action Desc: Date the DNR approves the RAOR and RP is notified via written or verbal communication.
Action Comment:

Action Date: 08/29/2002
Action Code: 500
Action Name: PECFA Recosting
Action Desc: Responsible party notified that a new cost cap for PECFA reimbursement is being established.
Action Comment:

Action Date: 09/18/1995
Action Code: 37
Action Name: SI Report Received (w/out Fee)
Action Desc: Date the DNR receives the Site Investigation Report. Provides information regarding activities performed to determine degree & extent of contamination and forming a basis for choosing the appropriate remedial action.
Action Comment: SI REPORT RECV'D

Action Date: 01/06/1997
Action Code: 43
Action Name: Status Report Received/8
Action Desc: Date updates on progress are received. Can be 30, 60, 90 days or other interval.
Action Comment:

Action Date: 04/23/1991
Action Code: 2
Action Name: RP Letter Sent
Action Desc: Date of letter to RP notifying of legal responsibilities associated with the discovery of contamination.
Action Comment: RP LETTER

Action Date: 02/23/2005
Action Code: 700
Action Name: Database Fee Paid for Groundwater
Action Desc: Date Fee received for Closed Remediation Groundwater Site Registry.
Action Comment:

Action Date: 03/21/2003
Action Code: 502
Action Name: Bidding Completed
Action Desc: Responsible party notified that a PECFA bid has established the total allowable reimbursement. See comments for details.
Action Comment:

Action Date: 12/03/1993
Action Code: 59
Action Name: Enforcement Action Completed
Action Desc: Date DNR indicates no further enforcement action on this subject will be taken at this time.
Action Comment:

Action Date: 01/06/2003
Action Code: 43
Action Name: Status Report Received/10
Action Desc: Date updates on progress are received. Can be 30, 60, 90 days or other interval.
Action Comment: SENT TO BID

Action Date: 04/23/1991
Action Code: 1
Action Name: Notification
Action Desc: Date the DNR is notified of the discovery of the contamination.
Action Comment:

Action Date: 03/04/1993
Action Code: 3
Action Name: Notice of Noncompliance (NON)/2
Action Desc: Date RP is sent a Notice of Noncompliance (NON) as a result of their failure or refusal to comply. Identifies the specific violation and requires a response within a given time period.
Action Comment: NTC OF NON COMPLIANCE

Action Date: 12/27/2005
Action Code: 232
Action Name: Continuing Obligation - Residual Soil Contamination
Action Desc: Closure or ongoing cleanup was approved with the requirement to record this site on the GIS Registry due to residual soil contamination at or above the Residual Contamination Level (RCL) or Site Specific Residual Contaminant Level (SSRCL).Â©Â©Â©
Action Comment: *** AUTO POPULATED AT FINAL CLOSURE DUE TO 710 ACTION ***

Action Date: 02/23/2005
Action Code: 710
Action Name: Database Fee Paid for Soil
Action Desc: Date Fee received for Closed Remediation Soil Site Registry.
Action Comment:

Action Date: 02/23/2005
Action Code: 79
Action Name: Closure Review Request Received with Fee
Action Desc: Date DNR Project Manager determined that the Case Closure - GIS Registry (Form 4400-202) submittal was administratively complete and a review can begin. Fees have been paid for the review.
Action Comment:

Action Date: 11/05/1997
Action Code: 39
Action Name: Remedial Action Options Report received (w/out Fee)
Action Desc: Date DNR receives the RAOR (a workplan). It identifies and evaluates options to prevent, minimize, stabilize or eliminate threats from the discharged hazardous substances and to restore the environment to the extent practicable.
Action Comment:

Action Information

Action Date: 12/02/2004
Action Code: 100
Action Name: GIS Registry QAQC Completed
Action Desc: Date and status that this site had QAQC completed for GIS registry.
Action Comment:

Action Date: 09/03/2004
Action Code: 56
Action Name: Continuing Obligation(s) Required - GIS Registry Site
Action Desc: Closure or ongoing cleanup was approved with one or more requirements: to give notice of residual contamination; require or restrict certain actions to protect the public or environment; minimize human or environmental exposures. Site conditions merit placement on the GIS registryÂ©Â©Â©
Action Comment: AUTO-POPULATED AS REPLACEMENT FOR CODE 50

Action Date: 01/19/1996
Action Code: 30
Action Name: Site Investigation Workplan Go Ahead (notice to proceed)/2
Action Desc: Date the DNR allows the RP to proceed without approval of the SIWP. Either written or by phone call.
Action Comment:

Action Date: 08/19/1998
Action Code: 35
Action Name: Site Investigation Workplan Received (w/out Fee)/3
Action Desc: Date the DNR receives the Site Investigation Workplan. States the objectives of the investigation to determine the degree and extent of contamination.
Action Comment:

Action Date: 10/18/1994
Action Code: 1
Action Name: Notification
Action Desc: Date the DNR is notified of the discovery of the contamination.
Action Comment:

Action Date: 07/02/2013
Action Code: 89
Action Name: DSPS (formerly Commerce) Transferred Back to DNR
Action Desc: Date the WI Dept of Safety and Professional Services (DSPS) transfers oversight of activity back to the DNR. DSPS was part of the Dept of Commerce until 2011.
Action Comment: PECFA PROGRAM TRANSFER 2013-2015 STATE BUDGET

Action Date: 07/01/1996
Action Code: 37
Action Name: SI Report Received (w/out Fee)/2
Action Desc: Date the DNR receives the Site Investigation Report. Provides information regarding activities performed to determine degree & extent of contamination and forming a basis for choosing the appropriate remedial action.
Action Comment: *** SITE INVESTIGATION DETERMINED BY DSPS TO BE COMPLETE - FROM DSPS DATA INTERCHANGE ***

Action Date: 10/21/1996
Action Code: 30

Activity Comments: ***SITE WAS CLOSED UNDER THE JURISDICTION OF THE DEPT OF SAFETY AND PROFESSIONAL SERVICES (DSPS) OR DEPT OF COMMERCE - SITE TRANSFERRED BACK TO DNR JURISDICTION IN 2013***

Action Information

Action Date:	06/26/2001
Action Code:	84
Action Name:	Conditional Closure
Action Desc:	Date conditional closure approval letter is sent - the site will not be formally closed until receipt of documentation of abandonment of wells, disposal of soil, etc.
Action Comment:	*** Conditional Closure from Commerce Data Interchange ***
Action Date:	07/31/2001
Action Code:	232
Action Name:	Continuing Obligation - Residual Soil Contamination
Action Desc:	Closure or ongoing cleanup was approved with the requirement to record this site on the GIS Registry due to residual soil contamination at or above the Residual Contamination Level (RCL) or Site Specific Residual Contaminant Level (SSRCL).Â©Â©Â©
Action Comment:	
Action Date:	09/26/1996
Action Code:	1
Action Name:	Notification
Action Desc:	Date the DNR is notified of the discovery of the contamination.
Action Comment:	
Action Date:	07/31/2001
Action Code:	236
Action Name:	Continuing Obligation - Residual GW Contamination
Action Desc:	Closure or ongoing cleanup was approved with the requirement to record this site on the GIS Registry due to

residual groundwater contamination in excess of ch. NR 140 groundwater enforcement standardÂ©Â©Â©

Action Comment:

Action Date: 07/31/2001
Action Code: 56
Action Name: Continuing Obligation(s) Required - GIS Registry Site
Action Desc: Closure or ongoing cleanup was approved with one or more requirements: to give notice of residual contamination; require or restrict certain actions to protect the public or environment; minimize human or environmental exposures. Site conditions merit placement on the GIS registryÂ©Â©Â©
Action Comment: AUTO-POPULATED AS REPLACEMENT FOR CODE 50

Action Date: 07/02/2013
Action Code: 89
Action Name: DSPS (formerly Commerce) Transferred Back to DNR
Action Desc: Date the WI Dept of Safety and Professional Services (DSPS) transfers oversight of activity back to the DNR. DSPS was part of the Dept of Commerce until 2011.
Action Comment: PECFA PROGRAM TRANSFER 2013-2015 STATE BUDGET

Action Date: 06/06/2000
Action Code: 37
Action Name: SI Report Received (w/out Fee)
Action Desc: Date the DNR receives the Site Investigation Report. Provides information regarding activities performed to determine degree & extent of contamination and forming a basis for choosing the appropriate remedial action.
Action Comment: *** SITE INVESTIGATION DETERMINED BY DSPS TO BE COMPLETE - FROM DSPS DATA INTERCHANGE ***

Action Date: 07/23/2001
Action Code: 51
Action Name: Deed Affidavit at Closeout
Action Desc: Date Deed Affidavit recorded with the Register of Deeds. Mostly used for residual soil contamination or for monitoring wells needing abandonment. Notes conditions required under code rather than as a property-specific condition(s).
Action Comment: CONTAINS SOIL & GW LANGUAGE

Action Date: 07/31/2001
Action Code: 11
Action Name: Activity Closed
Action Desc: Date the Closure Letter or No Further Action letter is sent.
Action Comment: *** NR726 Closure from Commerce Data Interchange ***

Action Date: 07/23/2001
Action Code: 730
Action Name: Groundwater Use Restriction at Closure Added to GIS Registry
Action Desc: A Groundwater Use Restriction (GWUR) for residual groundwater contamination was required at closure and recorded at the Register of Deeds (as of 11/2001 these were replaced with listing on the DNR GIS Registry). This site was added to the GIS Registry with a copy of the GWUR. No fee was required.
Action Comment:

Action Date: 06/26/2001
Action Code: 50
Action Name: GIS Registry Site
Action Desc: Site conditions merit placement on GIS registry.
Action Comment:

Action Date: 03/29/2002
Action Code: 100
Action Name: GIS Registry QAQC Completed
Action Desc: Date and status that this site had QAQC completed for GIS registry.
Action Comment:

Action Date: 06/02/2000
Action Code: 76
Action Name: Activity Transferred to DSPS (formerly Commerce)
Action Desc: Oversight of medium or low risk petroleum cleanup has been transferred to the WI Dept of Safety and Professional Services (DSPS). DSPS was part of the Dept of Commerce until 2011.Â©Â©Â©
Action Comment:

Action Date: 10/09/1996
Action Code: 2

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB

Site: ***MADISON 190-72 (TRUAX LANDFILL)***
ABERG AVENUE CITY OF MADISON WI

SHWS

Category:	Category 1: Site of facilities which present a substantial danger to the public health or welfare, or the environment.
Site Status:	The unlined landfill is now closed. Recently a gas collection system was installed at the landfill to control the migration of methane gas which was accumulating in building located immediately adjacent to the landfill. The Department intends to require the construction of a clay cap over the landfill to reduce the generation of leachate and an interior gas collection system. Under Department order, the City of Madison and Dane County have submitted an Environmental Contamination Assessment Report for the Truax site.
Date:	September 20, 1993 (Revised March 17, 1994)
Imminent Risk:	There is no imminent risk currently present at this site. In 1990 methane gas was detected in neighboring buildings at explosive levels. The City of Madison has installed a methane collection and venting system which is currently controlling the migration
Substance of Concern:	Substances detected in groundwater samples include arsenic, barium, cadmium, chromium, lead, zinc, 1,1-dicliloroethylene, 1,2-dichloroethane, ethylbenzene, fluorotricholoromethane, tetracliloroethylene, trichloroethylene, toluene, vinyl chloride, and xylenes. Although these compounds have been found in the groundwater downgradient of the landfill, there are other sources such as jet fuel storage tanks, a fire test burn area, and an old wastewater treatment plant in the immediate vicinity of the landfill which may also be contributing to groundwater contamination.
Reason for Substantial Danger:	Truax Landfill is located within the City of Madison on the City¿s near east side. The site is suspected of causing documented groundwater contamination in the area. There are seven city water supply wells as well as industrial water supply wells within the three mile evaluation distance used for hazard ranking.
Site Geology Hydrogeology:	The topography and surface soils at the Truax Landfill site result from glaciation of the region during the Wisconsin ice advance 13,000 to 18,000 years ago. A pre-glacial valley underlies the site. This valley is filled with glacial sand, silt, gravel, and thick clay layers. The glacially deposited soil covers deeply dissected sandstone and dolomite of the Ordovician period. The Ordovician formations overlie Cambrian sedimentary bedrock. These sedimentary rocks are primarily sandstones with interbedded shale, siltstones, and dolomite. Sandstone units consist, in ascending order, of the Mount Simon, Eau Claire, Galesville, and Franconia Sandstones, and the Trempealeau formation. The Cambrian bedrock range in depths from 400 to 700+ feet. The basement bedrock is crystalline rock of the Precambrian age. This rocks consist of igneous and metamorphic rocks which are found at depths greater than 700 feet. Seasonal groundwater in the vicinity east of the Truax landfill may be as shallow as 5 feet. Groundwater at the landfill itself is deeper because of the rise of the landfill over the nauiral topography.
Physical Condition at the Site:	The Truax Landfill was operated by several authorities over a 30 to 40 year period. The landfill was last operated by the City of Madison. It was closed in 1972. The site is presently capped with sand, silt, and clay soils which range in thickness from 2 to 12 feet. Pordons of the capped have been depressed because of settling within the waste, and surface water ponds in these areas. The site has vegetation growing on it.

Spill Source Comment: SUSPECT DRILLING FLUIDS NEARBY
Resource Damage Comment:
Spill Comment: T. AMMAN CHECKED SITE WITH WARDEN STRELOW IN THE AM ON 8/31/07 AND CONFIRMED PRESENCE OF MILKY LIQUID IN STARKWEATHER CREEK. T. AMMAN CHECKED SITE AGAIN IN THE PM WITH TSORIS AND KRYAN (MADISON PUBLIC WORKS). WE NOTICED TWO RECENT DRILL HOLES ABOUT 80 FEET WEST OF THE CREEK. BOTH DRILL HOLES HAD BEEN FILLED TO OVERFLOWING WITH A BENTONITE SLURRY. MATERIAL IN THE CREEK SEEMS TO BE IDENTICAL TO THE BENTONITE SLURRY. T. AMMAN COLLECTED A SAMPLE IN THE CREEK - LOOKED TO BE HIGH IN SUSPENDED SOLIDS - BENTONITE? CHECKED THE SAMPLE A FEW DAYS LATER - SOLIDS HAD ALL SETTLED OUT. WE CONCLUDED THAT BENTONITE WAS GETTING INTO THE STREAM AND CAUSING THE MILKY LIQUID. T. AMMAN CHECKED THE SITE AGAIN ON 9/5/07. ALTHOUGH THE ENTIRE STREAM WAS QUITE TURBID, NO SIGN OF THE MILKY LIQUID.

Appendix: Database Descriptions

Environmental Risk Information Services (ERIS) can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to ERIS at the time of update. ERIS updates databases as set out in ASTM Standard E1527-13, Section 8.1.8 Sources of Standard Source Information:

"Government information from nongovernmental sources may be considered current if the source updates the information at least every 90 days, or, for information that is updated less frequently than quarterly by the government agency, within 90 days of the date the government agency makes the information available to the public."

Standard Environmental Record Sources

Federal

National Priority List: NPL

National Priorities List (Superfund)-NPL: EPA's (United States Environmental Protection Agency) list of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Superfund program. The NPL, which EPA is required to update at least once a year, is based primarily on the score a site receives from EPA's Hazard Ranking System. A site must be on the NPL to receive money from the Superfund Trust Fund for remedial action.

Government Publication Date: Feb 6, 2018

National Priority List - Proposed: PROPOSED NPL

Includes sites proposed (by the EPA, the state, or concerned citizens) for addition to the NPL due to contamination by hazardous waste and identified by the Environmental Protection Agency (EPA) as a candidate for cleanup because it poses a risk to human health and/or the environment.

Government Publication Date: Feb 6, 2018

Deleted NPL: DELETED NPL

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Government Publication Date: Feb 6, 2018

SEMS List 8R Active Site Inventory: SEMS

The Superfund Program has deployed the Superfund Enterprise Management System (SEMS), which integrates multiple legacy systems into a comprehensive tracking and reporting tool. This inventory contains active sites evaluated by the Superfund program that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The Active Site Inventory Report displays site and location information at active SEMS sites. An active site is one at which site assessment, removal, remedial, enforcement, cost recovery, or oversight activities are being planned or conducted.

Government Publication Date: Apr 11, 2018

SEMS List 8R Archive Sites: SEMS ARCHIVE

The Superfund Enterprise Management System (SEMS) Archived Site Inventory displays site and location information at sites archived from SEMS. An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time.

Government Publication Date: Apr 11, 2018

Comprehensive Environmental Response, Compensation and Liability Information System - CERCLIS: CERCLIS

Superfund is a program administered by the United States Environmental Protection Agency (EPA) to locate, investigate, and clean up the worst hazardous waste sites throughout the United States. CERCLIS is a database of potential and confirmed hazardous waste sites at which the EPA Superfund program has some involvement. It contains sites that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The EPA administers the Superfund program in cooperation with individual states and tribal governments; this database is made available by the EPA.

Government Publication Date: Oct 25, 2013

CERCLIS - No Further Remedial Action Planned: CERCLIS NFRAP

An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time. The Archive designation means that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL). This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Government Publication Date: Oct 25, 2013

CERCLIS Liens: CERCLIS LIENS

A Federal Superfund lien exists at any property where EPA has incurred Superfund costs to address contamination ("Superfund site") and has provided notice of liability to the property owner. A Federal CERCLA ("Superfund") lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. This database is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Jan 30, 2014

RCRA CORRACTS-Corrective Action: RCRA CORRACTS

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. At these sites, the Corrective Action Program ensures that cleanups occur. EPA and state regulators work with facilities and communities to design remedies based on the contamination, geology, and anticipated use unique to each site.

Government Publication Date: Jan 24, 2018

RCRA non-CORRACTS TSD Facilities: RCRA TSD

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. This database includes Non-Corrective Action sites listed as treatment, storage and/or disposal facilities of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA).

Government Publication Date: Jan 24, 2018

RCRA Generator List: RCRA LQG

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Large Quantity Generators (LQGs) generate 1,000 kilograms per month or more of hazardous waste or more than one kilogram per month of acutely hazardous waste.

Government Publication Date: Jan 24, 2018

RCRA Small Quantity Generators List: RCRA SQG

RCRA Info is the EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Small Quantity Generators (SQGs) generate more than 100 kilograms, but less than 1,000 kilograms, of hazardous waste per month.

Government Publication Date: Jan 24, 2018

RCRA Conditionally Exempt Small Quantity Generators List: RCRA CESQG

RCRA Info is the EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Conditionally Exempt Small Quantity Generators (CESQG) generate 100 kilograms or less per month of hazardous waste or one kilogram or less per month of acutely hazardous waste.

Government Publication Date: Jan 24, 2018

RCRA Non-Generators: RCRA NON GEN

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Non-Generators do not presently generate hazardous waste.

Government Publication Date: Jan 24, 2018

Federal Engineering Controls-ECs: FED ENG

Engineering controls (ECs) encompass a variety of engineered and constructed physical barriers (e.g., soil capping, sub-surface venting systems, mitigation barriers, fences) to contain and/or prevent exposure to contamination on a property. This database is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Jan 20, 2016

Federal Institutional Controls- ICs: FED INST

Institutional controls are non-engineered instruments, such as administrative and legal controls, that help minimize the potential for human exposure to contamination and/or protect the integrity of the remedy. Although it is EPA's (United States Environmental Protection Agency) expectation that treatment or engineering controls will be used to address principal threat wastes and that groundwater will be returned to its beneficial use whenever practicable, ICs play an important role in site remedies because they reduce exposure to contamination by limiting land or resource use and guide human behavior at a site.

Government Publication Date: Jan 20, 2016

Emergency Response Notification System: ERNS 1982 TO 1986

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

Government Publication Date: 1982-1986

Emergency Response Notification System: ERNS 1987 TO 1989

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

Government Publication Date: 1987-1989

Emergency Response Notification System: ERNS

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories. This database is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Feb 8, 2017

The Assessment, Cleanup and Redevelopment Exchange System (ACRES) Brownfield Database: FED BROWNFIELDS

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties protects the environment, reduces blight, and takes development pressures off greenspaces and working lands. This database is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Feb 20, 2018

FEMA Underground Storage Tank Listing: FEMA UST

The Federal Emergency Management Agency (FEMA) of the Department of Homeland Security maintains a list of FEMA owned underground storage tanks.

Government Publication Date: Dec 31, 2017

LIEN on Property: SEMS LIEN

The EPA Superfund Enterprise Management System (SEMS) provides LIEN information on properties under the EPA Superfund Program.

Government Publication Date: Apr 11, 2018

State

Hazard Ranking List: SHWS

Last published in 1994, this is a list of sites which were investigated by the Deparment of Natural Resources (DNR) under the Wisconsin Environmental Repair Law. Hazard ranking of a site or facility was performed to determine if the site or facility presents a substantial danger to the public health, or welfare, or the environment. The DNR Bureau for Remediation and Redevelopment now maintains other programs for the investigation and cleanup of potential and confirmed contamination to soil and groundwater in Wisconsin. This database is state equivalent CERCLIS.

Government Publication Date: July 1994

Licensed Solid Waste Landfills: SWF/LF

List of licensed solid waste landfills in the state of Wisconsin as recorded by the Department of Natural Resources (DNR). The DNR regulates landfills to prevent negative impacts to people and the environment. DNR staff inspect landfills regularly.

Government Publication Date: Apr 18, 2018

The Historic Registry of Waste Disposal Sites: WDS

Prior to development of on-line databases, the Wisconsin Department of Natural Resources (DNR) provided public information about old waste disposal facilities in a printed publication called the Historic Registry of Waste Disposal Sites (the "Registry").

Government Publication Date: Jul 22, 2013

Solid & Hazardous Waste Information Management System: SHWIMS

List of sites and facilities in the Solid and Hazardous Waste Information System (SHWIMS) regulated by the Wisconsin Department of Natural Resources (DNR) Waste and Materials Management (WMM) program. Activities that occur at site facilities include landfill operation, waste transportation, hazardous waste generation, wood burning, waste processing, sharps collection and many more.

Government Publication Date: Oct 26, 2017

Leaking Underground Storage Tanks: LUST

List of Leaking Underground Storage Tank (LUST) sites as recorded by the Department of Natural Resources (DNR). When petroleum products are released from underground tanks into the soil or groundwater, the DNR will work with the responsible party and environmental professionals to clean up the spill to state standards.

Government Publication Date: Jan 30, 2018

Leaking Aboveground Storage Tanks: LAST

List of Leaking Aboveground Storage Tank (LAST) sites as recorded by the Department of Natural Resources (DNR). When petroleum products are released from tanks into the soil or groundwater, the DNR will work with the responsible party and environmental professionals to clean up the spill to state standards.

Government Publication Date: Jan 30, 2018

Underground Storage Tanks: UST

List of underground storage tank locations regulated by the Storage Tank Regulation Section of the Wisconsin Department of Agriculture, Trade, and Consumer Protection. Regulation and administration is outlined in the Wisconsin Administrative Code SPS 310 - Flammable and Combustible Liquids.

Government Publication Date: Dec 12, 2016

Aboveground Storage Tanks: AST

List of aboveground storage tanks regulated by the Storage Tank Regulation Section of the Wisconsin Department of Agriculture, Trade, and Consumer Protection. Regulation and administration is outlined in the Wisconsin Administrative Code SPS 310 - Flammable and Combustible Liquids.

Government Publication Date: Dec 12, 2016

Delisted Storage Tanks: DEL STORAGE TANK

This database contains a list of closed storage tank sites that were removed from the storage tank database regulated by the Storage Tank Regulation Section of the Wisconsin Department of Agriculture, Trade, and Consumer Protection.

Government Publication Date: Dec 12, 2016

Delisted Leaking Tanks: DELISTED LST

This database contains a list of closed leaking tank sites that were removed from the leaking tank database regulated by the Storage Tank Regulation Section of the Wisconsin Department of Natural Resources.

Government Publication Date: Jan 30, 2018

Closed Remediation Sites: CRS

List of sites which have undergone remediation and where particular legal restrictions on property use are in place. To be considered a Closed Remediation Site, the Department of Natural Resources must be satisfied that no further efforts are necessary provided that the property is not used for certain purposes.

Government Publication Date: Apr 27, 2018

Deed Restriction at Closeout Sites: AUL

List of sites for which a deed restriction is recorded at the Register of Deeds office. Deed restrictions limit property use or outline requirements for actions prior to future use. Deed restrictions are applied in cases where there is known soil contamination that is impracticable to remove, or an engineering requirement or NR270 industrial standards are in place.

Government Publication Date: Jan 30, 2018

Voluntary Party Liability Exemption Sites: VCP

List of sites which have participated in the Voluntary Party Liability Exemption (VPLE) program, an elective environmental cleanup program administered by the Wisconsin Department of Natural Resources (DNR), and received an exemption from future environmental liability. Any individual, business or unit of government that conducts an environmental investigation and cleanup of a contaminated property - following state requirements with the oversight of DNR staff - can receive an exemption from future environmental liability. With some restrictions, most properties that have had a discharge of a hazardous substance are eligible for VPLE.

Government Publication Date: Jan 30, 2018

Brownfields Environmental Assessment Program: BEAP

List of sites which participated in the Brownfields Environmental Assessment Program (BEAP) - a federal program that assisted municipalities with Environmental Site Assessments (ESAs) for tax delinquent or bankrupt properties, or properties a local government acquired for redevelopment. Site assessments to determine property contamination were conducted by the Department of Natural Resources staff.

Government Publication Date: Jan 30, 2018

Brownfields Listing: BROWNFIELDS

The Department of Natural Resource (DNR)'s Remediation and Redevelopment program has a wide range of financial and liability tools available to assist local governments, businesses, lenders and others to clean up and redevelop brownfields in Wisconsin. DNR describes brownfields as abandoned, idle or underused commercial or industrial properties, where the expansion or redevelopment is hindered by real or perceived contamination. Brownfield properties present public health, economic, environmental and social challenges to the rural and urban communities in which they are located.

Government Publication Date: Jan 30, 2018

Environmental Repair: ERP

Environmental Repair Program sites are those other than Leaking Underground Storage Tanks (LUSTs) that have contaminated soil and/or groundwater. Examples include industrial spills (or dumping) that need long term investigation, buried containers of hazardous substances, and closed landfills that have caused contamination.

Government Publication Date: Jan 30, 2018

Solid Waste - Landfills and Historic Waste Sites: HIST LF

A list of active and inactive solid waste landfills and known historic waste sites available through the Wisconsin Department of Natural Resources' Open Data Portal. This list is based on the known or inferred limits of waste found in the 'Solid Waste - Landfills and Historic Waste Site Extents' dataset.

Government Publication Date: Jan 31, 2017

Tribal

Leaking Underground Storage Tanks on Indian Lands: INDIAN LUST

LUSTs on Tribal/Indian Lands in EPA Region 5, which includes Michigan, Minnesota, and Wisconsin.

Government Publication Date: Oct 16, 2017

Underground Storage Tanks (USTs) on Indian Lands: INDIAN UST

USTs on Tribal/Indian Lands in Region 5, which includes Michigan, Minnesota, and Wisconsin.

Government Publication Date: Oct 16, 2017

Delisted Tribal Leaking Storage Tanks: DELISTED ILST

Leaking Underground Storage Tank facilities which have been removed from the Regional Tribal LUST lists made available by the EPA.

Government Publication Date: Oct 14, 2017

Delisted Tribal Underground Storage Tanks: DELISTED IUST

Underground Storage Tank facilities which have been removed from the Regional Tribal UST lists made available by the EPA.

Government Publication Date: Oct 14, 2017

County

No County standard environmental record sources available for this State.

Additional Environmental Record Sources

Federal

Facility Registry Service/Facility Index: FINDS/FRS

The US Environmental Protection Agency (EPA)'s Facility Registry System (FRS) is a centrally managed database that identifies facilities, sites or places subject to environmental regulations or of environmental interest. FRS creates high-quality, accurate, and authoritative facility identification records through rigorous verification and management procedures that incorporate information from program national systems, state master facility records, data collected from EPA's Central Data Exchange registrations and data management personnel.

Government Publication Date: Dec 12, 2017

Toxics Release Inventory (TRI) Program: TRIS

The EPA's Toxics Release Inventory (TRI) is a database containing data on disposal or other releases of over 650 toxic chemicals from thousands of U.S. facilities and information about how facilities manage those chemicals through recycling, energy recovery, and treatment. One of TRI's primary purposes is to inform communities about toxic chemical releases to the environment.

Government Publication Date: Dec 31, 2016

Hazardous Materials Information Reporting System: HMIRS

US DOT - Department of Transportation Pipeline and Hazardous Materials Safety Administration (PHMSA) Incidents Reports Database taken from Hazmat Intelligence Portal, U.S. Department of Transportation.

Government Publication Date: Sep 11, 2017

National Clandestine Drug Labs: NCDL

The U.S. Department of Justice ("the Department") provides this data as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy.

Government Publication Date: Dec 21, 2017

Inventory of Open Dumps, June 1985: ODI

The Resource Conservation and Recovery Act (RCRA of the Act) provides for publication of an inventory of open dumps. The Act defines "open dumps" as facilities which do not comply with EPA's "Criteria for Classification of Solid Waste Disposal Facilities and Practices" (40 CFR 257).

Government Publication Date: Jun 1985

EPA Report on the Status of Open Dumps on Indian Lands: IODI

Public Law 103-399, The Indian Lands Open Dump Cleanup Act of 1994, enacted October 22, 1994, identified ongressional concerns that solid waste open dump sites located on American Indian or Alaska Native (AI/AN) lands threaten the health and safety of residents of those lands and contiguous areas. The purpose of the Act is to identify the location of open dumps on Indian lands, assess the relative health and environment hazards posed by those sites, and provide financial and technical assistance to Indian tribal governments to close such dumps in compliance with Federal standards and regulations or standards promulgated by Indian Tribal governments or Alaska Native entities.

Government Publication Date: Dec 31, 1998

Toxic Substances Control Act: TSCA

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.

The CDR enables EPA to collect and publish information on the manufacturing, processing, and use of commercial chemical substances and mixtures (referred to hereafter as chemical substances) on the TSCA Chemical Substance Inventory (TSCA Inventory). This includes current information on chemical substance production volumes, manufacturing sites, and how the chemical substances are used. This information helps the Agency determine whether people or the environment are potentially exposed to reported chemical substances. EPA publishes submitted CDR data that is not Confidential Business Information (CBI).

Government Publication Date: Jun 30, 2017

Hist TSCA: HIST TSCA

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.
The 2006 IUR data summary report includes information about chemicals manufactured or imported in quantities of 25,000 pounds or more at a single site during calendar year 2005. In addition to the basic manufacturing information collected in previous reporting cycles, the 2006 cycle is the first time EPA collected information to characterize exposure during manufacturing, processing and use of organic chemicals. The 2006 cycle also is the first time manufacturers of inorganic chemicals were required to report basic manufacturing information.
Government Publication Date: Dec 31, 2006

FTTS Administrative Case Listing: FTTS ADMIN
An administrative case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.
Government Publication Date: Jan 19, 2007

FTTS Inspection Case Listing: FTTS INSP
An inspection case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.
Government Publication Date: Jan 19, 2007

Potentially Responsible Parties List: PRP
Early in the cleanup process, the Environmental Protection Agency (EPA) conducts a search to find the potentially responsible parties (PRPs). EPA looks for evidence to determine liability by matching wastes found at the site with parties that may have contributed wastes to the site.
Government Publication Date: Oct 10, 2017

State Coalition for Remediation of Drycleaners Listing: SCRD DRYCLEANER
The State Coalition for Remediation of Drycleaners (SCRD) was established in 1998, with support from the U.S. Environmental Protection Agency (EPA) Office of Superfund Remediation and Technology Innovation. Coalition members are states with mandated programs and funding for drycleaner site remediation. Current members are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin.
Government Publication Date: Nov 08, 2017

Integrated Compliance Information System (ICIS): ICIS
The Integrated Compliance Information System (ICIS) is a system that provides information for the Federal Enforcement and Compliance (FE&C) and the National Pollutant Discharge Elimination System (NPDES) programs. The FE&C component supports the Environmental Protection Agency's (EPA) Civil Enforcement and Compliance program activities. These activities include Compliance Assistance, Compliance Monitoring and Enforcement. The NPDES program supports tracking of NPDES permits, limits, discharge monitoring data and other program reports.
Government Publication Date: Nov 18, 2016

Drycleaner Facilities: FED DRYCLEANERS
A list of drycleaner facilities from the Integrated Compliance Information System (ICIS). The Environmental Protection Agency (EPA) tracks facilities that possess NAIC and SIC codes that classify businesses as drycleaner establishments.
Government Publication Date: Sep 14, 2016

Delisted Drycleaner Facilities: DELISTED FED DRY
List of sites removed from the list of Drycleaner Facilities (sites in the EPA's Integrated Compliance Information System (ICIS) with NAIC or SIC codes identifying the business as a drycleaner establishment).
Government Publication Date: Sep 14, 2016

Formerly Used Defense Sites: FUDS
Formerly Used Defense Sites (FUDS) are properties that were formerly owned by, leased to, or otherwise possessed by and under the jurisdiction of the Secretary of Defense prior to October 1986, where the Department of Defense (DoD) is responsible for an environmental restoration. This list is published by the U.S. Army Corps of Engineers.
Government Publication Date: Nov 22, 2016

Material Licensing Tracking System (MLTS): MLTS
A list of sites that store radioactive material subject to the Nuclear Regulatory Commission (NRC) licensing requirements. This list is maintained by the NRC. As of September 2016, the NRC no longer releases location information for sites. Site locations were last received in July 2016.

Government Publication Date: Sep 13, 2016

Historic Material Licensing Tracking System (MLTS) sites: HIST MLTS

A historic list of sites that have inactive licenses and/or removed from the Material Licensing Tracking System (MLTS). In some cases, a site is removed from the MLTS when the state becomes an "Agreement State". An Agreement State is a State that has signed an agreement with the Nuclear Regulatory Commission (NRC) authorizing the State to regulate certain uses of radioactive materials within the State.

Government Publication Date: Jan 31, 2010

Mines Master Index File: MINES

The Master Index File (MIF) contains mine identification numbers issued by the Department of Labor Mine Safety and Health Administration (MSHA) for mines active or opened since 1971. Note that addresses may or may not correspond with the physical location of the mine itself.

Government Publication Date: Jul 31, 2017

Alternative Fueling Stations: ALT FUELS

List of alternative fueling stations made available by the US Department of Energy's Office of Energy Efficiency & Renewable Energy. Includes Biodiesel stations, Ethanol (E85) stations, Liquefied Petroleum Gas (Propane) stations, Ethanol (E85) stations, Natural Gas stations, Hydrogen stations, and Electric Vehicle Supply Equipment (EVSE). The National Renewable Energy Laboratory (NREL) obtains information about new stations from trade media, Clean Cities coordinators, a Submit New Station form on the Station Locator website, and through collaborating with infrastructure equipment and fuel providers, original equipment manufacturers (OEMs), and industry groups.

Government Publication Date: Apr 25, 2018

Superfund Decision Documents: SUPERFUND ROD

This database contains a listing of decision documents for Superfund sites. Decision documents serve to provide the reasoning for the choice of (or) changes to a Superfund Site cleanup plan. The decision documents include Records of Decision (ROD), ROD Amendments, Explanations of Significant Differences (ESD), along with other associated memos and files. This information is maintained and made available by the US EPA (Environmental Protection Agency).

Government Publication Date: Apr 11, 2018

Registered Pesticide Establishments: SSTS

List of active EPA-registered foreign and domestic pesticide-producing and device-producing establishments based on data from the Section Seven Tracking System (SSTS). The Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) Section 7 requires that facilities producing pesticides, active ingredients, or devices be registered. The list of establishments is made available by the EPA.

Government Publication Date: Mar 1, 2018

Polychlorinated Biphenyl (PCB) Notifiers: PCB

Facilities included in the national list of facilities that have notified the United States Environmental Protection Agency (EPA) of Polychlorinated Biphenyl (PCB) activities. Any company or person storing, transporting or disposing of PCBs or conducting PCB research and development must notify the EPA and receive an identification number.

Government Publication Date: Nov 30, 2017

State

Tier 2 Report: TIER 2

A list of Tier 2 facilities in Wisconsin. This list is provided by the Wisconsin Department of Military Affairs Division of Emergency Management.

Government Publication Date: May 3, 2018

Spills: SPILLS

List of spill events in the Wisconsin Department of Natural Resources (DNR) Bureau for Remediation and Redevelopment Tracking System. The Wisconsin DNR describes a spill as a discharge of a hazardous substance that may adversely impact, or threaten to impact public health, welfare or the environment.

Government Publication Date: Jan 30, 2018

Wisconsin Agricultural Spills: AGSPILLS

List of agricultural spill sites reported to the Wisconsin Department of Agriculture, Trade and Consumer Protection. The Agricultural Chemical Cleanup Program (ACCP) is in place to identify and manage pesticide and fertilizer spills to prevent these products from reaching the groundwater. Once a site has been identified as requiring remediation, the ACCP provides reimbursement for eligible costs incurred by the responsible person.

Government Publication Date: Feb 28, 2018

Wisconsin Bureau for Remediation and Redevelopment Tracking System: BRRTS

The Wisconsin Bureau for Remediation and Redevelopment Tracking System (BRRTS) contains information on the investigation and cleanup of potential and confirmed contamination to soil and groundwater in Wisconsin. This database includes: sites where an abandoned container with potentially hazardous contents has been inspected and recovered, and no known discharge to the environment has occurred; sites where there was, or may have been, a discharge to the environment and, based on the known information, the Department of Natural Resources (DNR) has determined that the responsible party does not need to undertake an investigation or cleanup in response to that discharge; and sites which have been removed from the tracking system and archived.

Government Publication Date: Jan 30, 2018

Wisconsin Agricultural Spills - Remediation Locations: AG SPILL REMED

List of agricultural spill site remediation locations made available by the Wisconsin Department of Agriculture, Trade and Consumer Protection. The Agricultural Chemical Cleanup Program (ACCP) is in place to identify and manage pesticide and fertilizer spills to prevent these products from reaching the groundwater. Once a site has been identified as requiring remediation, the ACCP provides reimbursement for eligible costs incurred by the responsible person.

Government Publication Date: Feb 28, 2018

Delisted BRRT: DELISTED BRRT

The Wisconsin Bureau for Remediation and Redevelopment Tracking System (BRRTS) maintained by the Wisconsin Department of Natural Resources contains information on the investigation and cleanup of potential and confirmed contamination to soil and groundwater in Wisconsin. Sites and site details are removed from the data made available to the public when the source of contamination is unclear and an investigation to determine the source of contamination is in progress.

Government Publication Date: Oct 27, 2015

Five Star Recognition Program Sites: DRYCLEANERS

The purpose of Wisconsin's Five Star Environmental Recognition Program for Drycleaners was to encourage drycleaners to become more environmentally-friendly. The program was divided into five different star categories, with the ultimate goal being to achieve the Five Star status. The program was sponsored by the Wisconsin Fabricare Institute (WFI), in cooperation with the Department of Natural Resources, the Department of Commerce, the University of Wisconsin Extension-Solid and Hazardous Waste Education Center and the Center for Neighborhood Technology. WFI discontinued the program on Jan 1, 2013

Government Publication Date: Jan 1, 2013

Tribal

No Tribal additional environmental record sources available for this State.

County

No County additional environmental record sources available for this State.

Definitions

Database Descriptions: This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

Detail Report: This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

Distance: The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries. All values are an approximation.

Direction: The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

Elevation: The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

Executive Summary: This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

Map Key: The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

Unplottables: These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and are included as reference.

APPENDIX E

Tank List for Milwaukee Street and Tank Details

APPENDIX F

Resumes of Project Team

LISA BRICKSON

Education

B.S., Secondary Education with Certification in Biology and Natural Science, University of Wisconsin-Madison, 1989

Specialty Certifications

Qualified Environmental Professional per EPA AAI Rule and ASTM E1527-13

ASTM E2600-15, Vapor Encroachment Screening on Property Involved in Real Estate Transactions, Certificate #4378

Professional Experience

Ms. Brickson has over 20 years of experience in the environmental field. Her area of expertise is Phase 1 Environmental Site Assessments (ESAs) of commercial and industrial properties. She performs ESAs for mergers and acquisitions, redevelopment of multiple parcel mixed-use properties, brownfields revitalization projects, and highway realignment / reconstruction projects in urban and rural locations. She has qualified as an Environmental Professional under the Environmental Protection Agency's (EPAs) All Appropriate Inquiries (AAI) Rule and has performed over 300 ESAs utilizing the American Society for Testing and Materials (ASTM) standards and client-specific scopes of work. Lisa's high quality reports have helped our clients successfully transact dozens of properties with environmental contamination.

Phase 1 Environmental Site Assessments

Performed over 250 Phase 1 ESAs for developers, municipalities, Wisconsin Department of Transportation (WisDOT), financial institutions, commerce, and industry. Below is a representation of some of the projects.

- Industrial properties prior to redevelopment under a USEPA Brownfield Grant in Madison, Wisconsin.
- Industrial properties prior to redevelopment under a USEPA Brownfield Grant in Prairie du Chien, Wisconsin.
- Industrial property prior to redevelopment under a USEPA Brownfield Grant in Belvidere, Illinois.
- Wisconsin Power and Light Nelson Dewey Generating Station in Cassville, Wisconsin, prior to possible deconstruction.
- Former Herbrand Quarry and Landfill prior to redevelopment as a City of Middleton park.

- Environmental Condition of Property reports for seven U.S. Army Reserve facilities in Iowa.
- WisDOT Phase 1 Hazardous Material Assessment for the Mineral Point Road and Midvale Boulevard intersection in Madison, Wisconsin, prior to reconstruction.
- Former Don Miller properties prior to redevelopment in Madison, Wisconsin.
- Former Bancroft Dairy surrounding properties prior to commercial redevelopment in Madison, Wisconsin.
- Tenney Plaza building prior to acquisition in Madison, Wisconsin.
- Goodman Jewelers properties prior to acquisition in Madison, Wisconsin.
- Former Badger Bus Depot prior to residential and commercial redevelopment in Madison, Wisconsin.
- Privately owned property and University of Wisconsin Madison property known as University Square prior to residential and commercial redevelopment in Madison, Wisconsin.
- Former Ideal Body Co. and surrounding residential properties prior to residential and commercial redevelopment in Madison, Wisconsin.
- Former Royster-Clark fertilizer manufacturing facility prior to redevelopment in Madison, Wisconsin.
- Thirty-four parcels of privately-owned land in the World Dairy Center and World Dairy Campus in Madison, Wisconsin.
- Former Uptown Brass nine-acre site in downtown prior to mixed-use redevelopment in Kenosha, Wisconsin.
- Former Wausau East High School prior to an apartment building redevelopment in Wausau, Wisconsin.
- Former Gund Brewery industrial property prior to a residential redevelopment in La Crosse, Wisconsin.
- Advance Transformer Company industrial facility prior to acquisition in Monroe, Wisconsin.
- Former Kramer Foundry city block prior to a residential and commercial redevelopment in Milwaukee, Wisconsin.

- Wisconsin Power & Light Blackhawk Generating Station prior to redevelopment in Beloit, Wisconsin.

Spill Response

Co-developed the spill response program for Nine Springs Environmental Consultants, Inc.

Coordinated immediate response and cleanup of over 150 spills of petroleum products, acids, caustics, industrial cleaners and other materials ranging in size from 5 to 15,000 gallons.

Soil and Groundwater Investigation and Remediation

Performed numerous leaking underground storage tank investigations and remediation projects in Wisconsin. Coordinated investigations and remediation at multiple out-of-state sites for an automobile manufacturer and car-rental system owner in Connecticut, Illinois, New Jersey, New York, Tennessee, and Virginia.

TONY J. KOLLASCH

Education

B.S., Geological Engineering, University of Wisconsin-Madison, 1996

B.S., Geology and Geophysics, University of Wisconsin-Madison, 1996

Professional Licenses

Engineer-in-Training, Wisconsin

Specialty Certifications

Certified Site Assessor, Wisconsin

Professional Experience

Mr. Kollasch utilizes his background in geological engineering and geology to link investigation and remediation solutions to meet the needs of clients. Tony has 17 years of experience, and his technical expertise emphasizes site assessment for case closure and redevelopment of properties. His project experience includes ASTM and AAI-compliant Phase 1 ESAs; Phase 2 ESAs; UST Closure Assessment, and site remediation. He has worked in Wisconsin, Iowa, Illinois, Michigan, Minnesota, Missouri, Florida, Georgia and Pennsylvania on a wide variety of projects.

Phase 1 Environmental Site Assessments

Completed over 150 Phase 1 Environmental Site Assessments (ESAs) at properties in 10 states.

Conducted multiple Phase 1 ESAs used to qualify for landowner liability protections under CERCLA. Qualified as an Environmental Professional under the All-Appropriate Inquiries (AAI) Rule.

Performed Phase 1 ESAs with expanded scope items, which fall outside the ASTM guidelines, including initial site inspections for asbestos, wetlands, radon, floodplains, earthquake potential, and water damage (potential mold issues).

Identified and utilized new technologies to more effectively and efficiently collect and present available environmental data including recent aerial photographs and site maps.

Brownfield Redevelopment

Managed a multi-year phased site investigation, remediation, and environmental coordination with construction oversight process with detailed City department input at an industrial laundry facility in Chicago, Illinois. Completed the project within the environmental budget and met project deadlines.

Performed Phase 1 and Phase 2 ESAs on a former shopping center and gas station (USTs and dry cleaner) and redevelopment as a high-rise building with underground parking at University Square in Madison, Wisconsin.

Assessed the former transportation terminal for a CVS Pharmacy in Madison, Wisconsin, through the Phase 1 and Phase 2 ESA process, assisting our client in acquiring brownfield funding sources for redevelopment. During redevelopment, managed impacted soil and groundwater from historical releases, and addressed real-time discoveries, including removing undocumented historical USTs and industrial fill areas.

Completed Phase 1 and Phase 2 ESAs on 1800's vintage residential properties in preparation for redevelopment of modern apartment buildings on the isthmus of Madison, Wisconsin.

Utilized municipal grant awards from the USEPA and IEPA to address a former riverfront iron foundry and salvage yard in Belvidere, Illinois. Work included Phase 1 and Phase 2 ESAs and remedial action plans for multiple properties related to planned residential redevelopment.

Utilized grant awards from the USEPA and IEPA to address multiple brownfields properties for the City of Waukegan, Illinois. Work under the grants included completing detailed Phase 2 ESAs.

Performed site investigation and developed strategic remedial options for redevelopment as a residential complex for a former barrel-plating site in Milwaukee, Wisconsin.

Completed environmental site assessment from historical records and site characterization for an unlicensed junkyard redevelopment as a health clinic in Robbins, Illinois. Thorough investigation and coordination with the proposed new construction plans were crucial to obtaining a No Further Action letter through the Site Remediation Program (SRP).

Worked on over 30 projects pursuing redevelopment for redevelopment sites throughout Illinois. Project work has included Phase 1 and Phase 2 ESAs, focused site investigations, remedial action plans, and state reimbursement budget claims.

Soil and Groundwater Investigation and Remediation

Worked on over 150 projects associated with petroleum site investigations and remediations at various sites in Wisconsin, Michigan, and Illinois. Projects involved performing site investigation activities; and preparation of site investigation reports; remedial action plans; design documents; remediation contracting; and operation, maintenance, and monitoring of remediation systems.

Utilized passive and active techniques to remove liquid petroleum from the subsurface while maximizing cost effectiveness and complying with state regulations for free product removal at various sites in Illinois and Michigan. Active technologies included enhanced fluid recovery and pump and treat groundwater systems. Implemented a free product abatement plan for both states, covering a total of over 100 sites.

Conducted site investigation and risk-based assessment at the Deerfield Toll Plaza in Deerfield, Illinois. Closure was granted for the site based on the relative risk to potential receptors at the property (toll way). Investigation and remediation costs were recovered from the Leaking Underground Storage Tank (LUST) fund.

Performed a rapid response free product removal due to a perceived explosive hazard in a nearby sewer main at a bulk terminal in River Rouge, Michigan. Rapid mobilization, active product removal, additional investigation, and system modifications were required while maintaining public safety under media and environmental Agency scrutiny.

RAY TIERNEY, PG, CEEP

Education

M.S. Water Resources Management, University of Wisconsin-Madison, 1987

B.S. Geology / Geophysics, Boston College, 1984

Professional Licenses/Registrations

Professional Geologist, Wisconsin

Certified Ground Water Professional

Certified Energy Efficiency Professional

Professional Experience

Mr. Tierney has 31 years of experience in environmental remediation, due diligence, and sustainability. Ray has helped manufacturers and other industrial clients control and reduce their legacy environmental liabilities, save money and reduce their risks, obtain grants and permits to expand, and implement cost saving practices. He has served as an expert witness for high-profile toxic tort lawsuits, has lead merger and acquisition due diligence teams, has given talks around the country on Disaster Recovery Planning, and has lead large-scale emergency responses at industrial facilities to both manage the liabilities associated with the disaster and to help businesses recover and thrive. Mr. Tierney has an M.S. from the University of Wisconsin-Madison.

Contamination Investigation and Remediation

Conducted soil, groundwater, sediment, surface water, and waste investigations at over 500 sites, including properties with contamination from solid and hazardous wastes, petroleum products, chlorinated solvents, polychlorinated biphenyls (PCBs), industrial chemicals, agrichemicals, and heavy metals. Remediation activities were often designed and coordinated with redevelopment construction activities to minimize costs and construction delays.

Acted as project manager for over 300 petroleum storage tank, petroleum terminal, petroleum spill, and petroleum pipeline corrective action sites. Remediation techniques have included, among others, soil excavation, soil venting, air sparging, groundwater extraction and treatment, bioremediation, and natural attenuation.

Brownfield Redevelopment

Conducted investigation, remediation, and redevelopment for hundreds of properties with soil and groundwater contamination throughout the United States. These have included, among other things, manufacturing plants, gasoline stations, automotive service shops, landfills, shopping malls, petroleum bulk plants, foundries, dry cleaners, chemical distributors, and hazardous substance spill and emergency response sites.

Acted as project manager for the historic renovation and redevelopment of many schools and industrial buildings into affordable housing projects in Wisconsin.

Analyzed and developed investigation and remediation strategies for industrial brownfield sites ranging from a fraction of an acre to over 50 acres in size.

Served as team leader for a successful $1,000,000 brownfield grant for a manufacturing property, a $430,000 brownfield grant for a petroleum distribution property, a brownfield grant for a municipal redevelopment, and many other brownfield and redevelopment projects.

Negotiated a variety of local approvals, development agreements, environmental insurance policies (cost cleanup policies and pollution legal liability policies), and tax incremental financing (TIF) agreements for brownfield redevelopment projects.

Involved with the legal support and/or has been an expert witness for lawsuits involving Superfund sites and petroleum contamination sites involving commercial, industrial, and residential properties.

Environmental Site Assessments and Merger and Acquisitions

Managed hundreds of Environmental Site Assessments (ESAs) ranging from abbreviated property transaction screens, to all manner of Phase 1 and 2 ESAs, to site investigation and remedial services. Performed ESAs in accordance with the American Society for Testing and Materials (ASTM) standards E 1527-00, E 1527-05, and the U.S. Environmental Protection Agency's (USEPA's) All Appropriate Inquiry (AAI) Standard, to meet financial institutions specific standards, various State requirements, and/or to meet client-specific scopes of work.

Performed merger and acquisition due diligence reviews by combining real estate, environmental, and health and safety evaluations of targeted companies. Reviews include real estate evaluations, as well as audits of ongoing operations at active businesses for compliance with U.S. Department of Labor – Occupational Safety and Health Administration (OSHA), USEPA, and state regulations, to quantify potential liabilities for ongoing transaction negotiations, and to plan for post-closing activities to address any future liabilities.

Completed Phase 2 ESAs, including full serve evaluations of soil, water, waste, building materials, and other site-specific potential hurdles to properties and/or re-development.

Conducted all types of site investigations to define the extent of contamination at a property for regulatory and cost liability assessment purposes for real estate developers, municipalities, and commercial and industrial clients.

Developed remediation costs to define liabilities associated with issues discovered in the assessment process, and conducted remediations to address these issues through to final closure.

Solid Waste Management

Managed In-field Conditions Study/Remedial Investigation for Jongetjes Landfill in Palmyra, Wisconsin. The project included the repair, replacement, and expansion of the existing

groundwater and gas monitoring system, monitoring well and gas probe installation and sampling, private well sampling, hydrogeologic conditions evaluation, landfill cap evaluation, and remedial alternative options assessment and implementation.

Performed quality assurance evaluation for an Initial Site Report preparation for waste landfill in southern Wisconsin.

Reviewed plan for many Initial Site Reports, Feasibility Studies, and Plan of Operations for municipal and industrial landfill in Wisconsin.

Evaluated groundwater monitoring networks and data sets, and established groundwater preventive action limits for many landfills in Wisconsin.

Prepared the Wisconsin Department of Natural Resources (WDNR) first Initial Site Report and Feasibility Completeness Checklists for proposed landfills.

Managed numerous Federal Superfund and Wisconsin Environmental Repair Program landfill projects.

Sustainability and Energy

Assists manufacturers with a broad range of services including environmental compliance, equipment upgrades, carbon footprint and greenhouse gas reduction strategies, asset dispositions, health and safety programs, pollution prevention, facility siting, grants and local approvals, disaster planning, and emergency response.

Served previously as supervisor of the remediation program for the State of Wisconsin; and then for the last 20 years at SCS Engineers has helped industry, developers, and municipalities across the country reduce and manage their legacy environmental liabilities in an orderly, cost effective way.

Directed energy savings assessments, life cycle cost return on investment evaluations, and energy use reduction projects at 25 manufacturers, including lighting, HVAC, waste heat recovery, air compressor, instrumentation, alternative energy, building envelope, and motor upgrade projects.

Subject: Phase II Environmental Site Assessment Report
E C Voit & Sons and Voit Land LLC Property
3450 Milwaukee Street
Town of Blooming Grove, Dane County, Wisconsin

Dear Ms. Bemis:

SCS Engineers (SCS) completed a Phase II Environmental Site Assessment (ESA) for the E C Voit & Sons property and part of the Voit Land LLC property located at 3450 Milwaukee Street in the Town of Blooming Grove, Dane County, Wisconsin (**Figure 1**).

SCS completed a Phase I ESA for the E C Voit & Sons property and part of the Voit Land LLC property on June 28, 2018. SCS identified two recognized environmental conditions (RECs) at the Property:

- Disposal of potentially contaminated material on the Property, and
- Detected contaminants in the groundwater near the Property.

Field activities during the Phase II investigation targeted areas of the Property where fill from unknown sources was placed to assess the materials present. Both Geoprobe® (geoprobe) borings and test pits were installed to evaluate the evolution of the Property site conditions. **Figures 2** through **4** outline the progression of the Property from existing conditions in 2015, 2010, and 2000. A second quarry pond was present northeast of the current pond as recently as 2000 (**Figure 4**). The pond was filled in with fill material from unknown sources.

Phase II Investigation Activities

Sample locations are plotted on **Figures 2** through **4** to show the locations relative to historical site features. Twelve geoprobe borings were advanced on the Property on September 26 and 27, 2018, primarily to investigate potential contaminant concerns in the historical pond area. Additional borings were advanced southeast and west of the existing pond related to potential fill materials (**Figure 2**). Geoprobe services were provided by On-site Environmental Services Inc., of Sun Prairie, Wisconsin. Mr. Tony Kollasch and Mr. Nate Harms of SCS supervised geoprobe activities, logged each boring, described the soils encountered, and collected soil and groundwater samples for laboratory analysis. All soil samples were field-screened with a photoionization detector (PID) calibrated to 100 parts per million (ppm) isobutylene. The borings logs (with soil descriptions and PID readings) are provided in **Attachment A**. One or two soil samples were collected for laboratory analysis from each borehole.

Fill material was encountered at most of the boring locations extending from the ground surface to depths of at least 15 feet and in some cases more than 29 feet in the former pond area, and depths

of 3 to 8 feet west of the existing pond. Fill soil types varied and included lean clay, poorly graded sand, and silty and clay sand. The fill materials generally overlay a native peaty and/or organic soil layer over a sand and gravel (**Attachment A**). Some fill layers were observed to contain black sand and trace angular gravel (potential cinders). The PID field screening results generally ranged from 0.5 to 3.5 instrument units (IUs) with an elevated measurement of 9.1 IUs at GP7-S1. All borings were abandoned with bentonite chips according to Wisconsin Department of Natural Resources (WDNR) code NR 141, and the abandonment forms are provided in **Attachment A**. Soil samples were submitted to Pace Analytical for testing of Resource and Conservation Recovery Act (RCRA) metals, polycyclic aromatic hydrocarbons (PAHs), and volatile organic compounds (VOCs).

Groundwater samples were collected from temporary boreholes GP2 and GP9. These two locations were selected based on their location in the former pond area and are near the northeast corner of the property where the previous detections of chlorinated compounds were identified on the adjoining Property. Both groundwater samples were sediment-laden due to the nature of the sampling technique.

On October 17 and 18, 2018, SCS oversaw a test pit investigation on the Property (**Figure 2**). Test pits were focused on three areas of filled soil: the eastern edge of the filled former quarry pond, the soil piles along the western property boundary, and soil piles southwest of the existing pond. Schaper Excavation and Petroleum LLC of Portage, Wisconsin, provided test pit excavation services. Mr. Nate Harms of SCS supervised the test pit investigation, logged each test pit location, described the soils encountered, and collected soil samples for laboratory analysis. All soil samples were field-screened with a PID. At least one soil sample was collected for analysis from each test pit. Additional soil volumes were collected from each test pit and transferred to the City of Madison for cold storage in case additional testing is desired. The test pit logs are presented in **Attachment A**.

Soils encountered in the test pits were similar to the boring logs with additional debris observed: plastic bags, cinders and slag, metal debris, PVC tubing, organic fibers, landscape fabric, concrete slabs, and large boulders (**Attachment A**). PID field screening results did not exceed background levels.

Laboratory Analytical Results

Laboratory analytical reports are included in **Attachment B**.

Soil

Sixteen soil samples were collected from the geoprobe boreholes and 19 soil samples were collected from the test pits for laboratory analysis. Soil analytical results are summarized in **Table 1** through **Table 3**, which include NR 720 residual contaminant levels (RCLs) and background threshold values (BTVs).

The laboratory results identified metals in soil at most of the boring and test pit sample locations, as summarized in **Table 1**. Arsenic results were detected above the NR 720 Groundwater Pathway Residual Contaminant Level (RCL) at all borings and test pit locations; however, most of the arsenic results were reported as estimated concentrations and/or were below the arsenic BTV, with the exception of three arsenic results at GP-4, GP-9, and TP-8. Some barium and cadmium soil concentrations were identified at levels greater than the NR 720 Groundwater Pathway RCLs but did not exceed the Wisconsin BTVs. Lead was reported in five samples at concentrations greater than

the groundwater pathway RCL, though only two of those lead concentrations were greater than the BTV. Three selenium soil results were greater than the NR 720 groundwater pathway RCL, but two were estimated concentrations and there is no established BTV for selenium. Other metals were detected in the soil samples below RCLs and BTVs.

The laboratory results identified PAHs in soil at many of the boring and test pit sample locations, as summarized in **Table 2**. The following PAHs were reported at concentrations greater than the NR 720 groundwater pathway and non-industrial direct contact RCLs:

- Benzo(a)anthracene
- Benzo(b)fluoranthene
- Benzo(a)pyrene
- Chrysene
- Dibenz(a,h)anthracene

Cumulative carcinogenic PAH (cPAH) standards were evaluated for each soil sample per NR 722 guidelines using the cPAH Evaluator Worksheet. The calculated cumulative cPAH cancer risk levels for each sample are summarized in **Table 2**. The calculation summaries are included in **Attachment C**. Seven of the cumulative cPAH cancer risk values exceed the 5×10^{-6} value identified in NR 722. Six of those values are for samples where at least one PAH compound concentration is also greater than the individual compound RCL. The one other cumulative result that is greater than the cPAH risk level is for TP11, where none of the individual PAH compound concentrations exceed an RCL, but eight of the 13 detected concentrations are estimated. Since these are estimated concentrations (not exact concentrations), and the value is just greater than the target value (5.1×10^{-6}), the cumulative result may or may not be significant or an ongoing concern.

We note that two VOCs (1,2-dibromo-3-chloropropane, and 1,2,3-trichloropropane) were not detected in any of the samples tested at the laboratory. However, based on the calculation method of including the reporting limit as the concentration in the cumulative calculation, and the extremely low cancer risk for each of these compounds, the calculator flagged each of these two VOCs as exceedances with cancer risk. Since these compounds were not detected in any of the samples, these compounds may not be a significant regulatory concern.

The laboratory results identified only methylene chloride in the VOC analysis. Methylene chloride was detected at nearly all the boring locations, and in one test pit location, TP-0. The soil VOC results are summarized in **Table 3**. Detected methylene chloride results exceed the NR 720 groundwater pathway RCL, though most were reported at estimated concentrations. In addition, the laboratory identified methylene chloride in the laboratory blank. The methylene chloride concentrations are likely laboratory remnants and are not considered a concern. No other VOCs were detected in the boring or test pit soil samples.

Groundwater

Groundwater grab samples were collected at boring locations GP-2 and GP-9 and submitted to Pace Analytical for metals, PAHs, and VOCs analysis. Groundwater analytical results are summarized and compared to NR 140 groundwater quality standards in **Tables 4** through **6**. Due to the sediment-laden nature of the samples collected from undeveloped boreholes, results should be confirmed with repeated sampling and analysis before determining that these concentrations are accurate.

Arsenic and barium were detected in both groundwater samples. No other metals were detected in either groundwater sample. The results are summarized in **Table 4**. Arsenic was reported at estimated concentrations above the NR 140 enforcement standard (ES) in both samples. Since the reported concentrations are estimates, they are not considered to exceed the ES. Reported barium concentrations were less than the NR 140 water quality standards. No other metals analyzed were detected.

The groundwater results identified low concentrations of PAHs in both samples, summarized in **Table 5**. Concentrations of three PAHs were detected in both samples above the NR 140 ES: benzo(a)pyrene, benzo(b)fluoranthene, and chrysene. Although these concentrations are greater than the ES, due to the sediment-laden nature of the samples collected from undeveloped boreholes, these results should be confirmed with samples collected from properly developed monitoring wells before determining that these concentrations are representative of groundwater contamination. Other detected PAH concentrations were reported below the NR 140 water quality standards.

The groundwater results identified three VOCs in GP2, one of which was at a concentration greater than the NR 140 preventive action limit (PAL), as summarized in **Table 6**. At GP2, benzene was reported at an estimated concentration greater than the NR 140 PAL. Since the concentration is estimated, the result should not be considered an exceedance of the NR 140 PAL. Toluene and chloromethane were also reported at estimated concentrations in GP2 but were below the NR 140 water quality standards. No VOCs were detected at the second groundwater sample, at GP-9.

Conclusions and Recommendations

The Phase II ESA investigation was completed to assess the potential impacts of fill materials placed on the property from unknown sources, and to assess whether groundwater impacts may be present related to that fill. Field observations identified the presence of limited quantities of cinders and solid waste in the fill. Laboratory analytical results identified the presence of metals, PAHs, and VOCs in soil and groundwater at the Property. Metals and PAHs were detected in soil at concentrations greater than their RCLs, and these results should be reported to WDNR in accordance with the Wisconsin Spills Law. Lab analyses of sediment-laden groundwater samples detected concentrations greater than standards; however, we recommend additional testing to verify that the detected contaminants are present in groundwater and not sorbed onto sediment. Taken as a whole, WDNR may consider the detected concentrations of contaminants in soil and groundwater to be *deminimis*, or may request additional investigation.

Please call us at 608-224-2830 with any questions regarding the Phase II ESA Report.

Sincerely,

Nicole Kron

Abbreviations:
mg/kg - milligrams per kilogram or parts per million (ppm)
CAS No. = Chemical Abstracts Service Number
RCLs = Residual Contaminant Levels
-- = Not Applicable
NA = Not Analyzed
NE = No Standard Established

Notes:
Bold+underlined values exceed NR 720 RCLs, as of June 2018.
[1] Chromium Direct Contact Standards: III Non-Industrial Direct Contact RCL = 100,000 mg/kg; Industrial Direct Contact RCL = 100,000 mg/kg
VI Non-Industrial Direct Contact RCL = 0.301 mg/kg; Industrial Direct Contact RCL = 6.36 mg/kg

[2] If no Chromium-VI
Background threshold values are non-outlier trace element maximum levels in Wisconsin surface soils from the USGS Report at: http://pubs.usgs.gov/sir/2011/5202, as listed in the WDNR RR Program's RCL spreadsheet at: http://dnr.wi.gov/topic/Brownfields/professionals.html.

Laboratory Notes/Qualifiers:
J = Estimated concentration at or above the Limit of Detection (LOD) and below the Limit of Quantitation (LOQ).
M0 = Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.

Table 2. Soil Analytical Results Summary - PAHs
E C Voit & Sons and Voit Land LLC., 3450 Milwaukee Street, Blooming Grove, Wisconsin / SCS Engineers Project #25218096.00

Abbreviations:
µg/kg = micrograms per kilogram or parts per billion (ppb)
DRO = Diesel Range Organics
PAHs = Polynuclear Aromatic Hydrocarbons
NA = Not Analyzed
PID = Photoionization Detector
GRO = Gasoline Range Organics
RCLs = Residual Contaminant Levels
NE = Not Established
ppm = parts per million
mg/kg = milligrams per kilogram
CAS No. = Chemical Abstracts Service Number
-- = Not Applicable

Notes:
Bold+underlined values exceed a NR 720 RCL, as of June 2018.
(a) NR 720 Groundwater Pathway RCL for 1,2,4- and 1,3,5-Trimethylbenzene Combined = 1,378.7
italized +underline Cummulative PAH (cPAH) Cancer Risk values is greter than 5E-6 the Cumulative PAH Cancer Risk Standard.
-Cumulative PAH for each sample was developed and provided in the Report.

Laboratory Notes/Qualifiers:
D3 = Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.
J = Estimated concentration at or above the Limit of Detection (LOD) and below the Limit of Quantitation (LOQ).
L2 = Analyte recovery in the laboratory control sample (LCS) was below QC limits. Results may be biased low.
(1) = Non-detect results are reported on a wet weight basis.

RE: Project: 25218096 VOIT FARMS
Pace Project No.: 40178071

Dear Tony Kollasch:
Enclosed are the analytical results for sample(s) received by the laboratory on October 19, 2018. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Dan Milewsky

ANALYTICAL RESULTS

Project: 25218096 VOIT FARMS
Pace Project No.: 40178071

Sample: TP-7 (7.5'-8') **Lab ID: 40178071001** Collected: 10/17/18 08:45 Received: 10/19/18 09:55 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

ANALYTICAL RESULTS

Project: 25218096 VOIT FARMS
Pace Project No.: 40178071

Sample: TP-8 (3'-4') **Lab ID: 40178071002** Collected: 10/17/18 09:30 Received: 10/19/18 09:55 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

ANALYTICAL RESULTS

Project: 25218096 VOIT FARMS
Pace Project No.: 40178071

Sample: TP-13 (4'-5') **Lab ID: 40178071007** Collected: 10/17/18 13:30 Received: 10/19/18 09:55 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

ANALYTICAL RESULTS

Project: 25218096 VOIT FARMS
Pace Project No.: 40178071

Sample: TP-15 (6'-7') **Lab ID: 40178071009** Collected: 10/17/18 14:30 Received: 10/19/18 09:55 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

ANALYTICAL RESULTS

Project: 25218096 VOIT FARMS
Pace Project No.: 40178071

Sample: TP-14 (7'-8') **Lab ID: 40178071010** Collected: 10/17/18 15:00 Received: 10/19/18 09:55 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.
