

Plan Investments Report

For period ending:
September 30, 2018

Prepared for:
City of Madison, WI

Presented by:
Lisa Burks-Wilson
Director, Relationship Management
ICMA RC

This report and commentary is provided by UpTick Data Technologies (www.uptickdata.com) on its PlanXtra automated plan monitoring and reporting system. PlanXtra is a registered trademark of UpTick Data Technologies. Report and Commentary ©2018 UpTick Data Technologies. All Rights Reserved.

The report shows how funds have performed measured against certain Morningstar, Inc. metrics¹, and can be used by plan sponsors to evaluate funds made available by their retirement plan. The plan sponsor may change the metrics measured in the report at any time.

Neither ICMA-RC nor UpTick are providing investment advice to the plan sponsor or assume any responsibility for the investment options selected by the plan sponsor for their retirement plan. The information presented in this report is based on publicly available information and is not a recommendation that any fund or other investment option be retained or removed from the retirement plan lineup.

ICMA-RC's role with respect to the Plan Investments Review Report is to provide administrative and clerical support by serving as the interface between the plan sponsor and UpTick Data Technologies. ICMA-RC associates will be able to provide factual information about the contents of the Plan Investments Review Report, including the different metrics that can be used, but cannot advise the plan sponsor on the selection or retention of any particular funds or investment options.

¹ Mutual Fund Performance Data ©2018 Morningstar, Inc. All Rights Reserved. The mutual fund performance information contained herein: (1) is proprietary to Morningstar and/or its content providers; (2) may not be copied or distributed to plan participants; and (3) is not warranted to be accurate, complete or timely. Table of Contents

Section I:	Executive Summary
Section II:	Investment Criteria & Summary
Section III:	Fees & Expenses
Section IV:	Alternative Investment Options
Section V:	Fund Profiles
Section VI:	Glossary
Section VII:	Disclosure

Please read the fund's prospectus or disclosure materials carefully for a complete summary of all fees, expenses, investment objectives and strategies, risks, financial highlights, and performance information. Investing involves risk, including possible loss of the amount invested. Investors should carefully consider the information contained in the prospectus or disclosure materials before investing. To request a prospectus or disclosure materials, you may contact us by calling 800-669-7400, emailing investorservices@icmarc.org, or visiting www.icmarc.org.

Section I: Executive Summary

Fund past performance, as shown, is no guarantee of how the Fund will perform in the future. The performance shown has been annualized for periods greater than one year. Investment returns and principal value will fluctuate, so that an investor's shares, when redeemed, may be worth more or less than their original cost. For current performance, visit www.icmarc.org.

Please read the fund's prospectus or disclosure materials carefully for a complete summary of all fees, expenses, investment objectives and strategies, risks, financial highlights, and performance information. Investing involves risk, including possible loss of the amount invested. Investors should carefully consider the information contained in the prospectus or disclosure materials before investing. To request a prospectus or disclosure materials, you may contact us by calling 800-669-7400, emailing investorservices@icmarc.org, or visiting www.icmarc.org.

IMPORTANT NOTICE REGARDING USE OF TICKER SYMBOLS UNDERLYING VT FUND PERFORMANCE: Your plan's investment options may include the VantageTrust Funds ("VT Funds") which are collective investment trust funds that are exempt from SEC registration as a mutual fund, are not listed on any public exchange, and do not have a ticker symbol. Note, however, that a certain subset of the VT Funds invest their assets in third-party registered mutual funds that have a ticker symbol. Reference to such underlying mutual funds, including reference to ticker symbols or other non-performance data, by VT Funds is for reference only and NOT reflective of the returns or fees of the corresponding VT Funds available in your plan. VT Funds will typically have certain recordkeeping and administrative fees that are in addition to the underlying mutual fund's fees. These fees will reduce the performance of the VT Fund when compared to the underlying mutual fund performance. VT Fund performance net of fees is provided just prior to disclosures at the end of this section of the brochure.

Funds and underlying funds of VantageTrust Funds are assigned according to categories determined by Morningstar. Morningstar compiles independent data for use by individual investors, financial advisors, and institutional clients.

Section II: Investment Criteria & Summary

Fund past performance, as shown, is no guarantee of how the Fund will perform in the future. The performance shown has been annualized for periods greater than one year. Investment returns and principal value will fluctuate, so that an investor's shares, when redeemed, may be worth more or less than their original cost. For current performance, visit www.icmarc.org.

Please read the fund's prospectus or disclosure materials carefully for a complete summary of all fees, expenses, investment objectives and strategies, risks, financial highlights, and performance information. Investing involves risk, including possible loss of the amount invested. Investors should carefully consider the information contained in the prospectus or disclosure materials before investing. To request a prospectus or disclosure materials, you may contact us by calling 800-669-7400, emailing investorservices@icmarc.org, or visiting www.icmarc.org.

IMPORTANT NOTICE REGARDING USE OF TICKER SYMBOLS UNDERLYING VT FUND PERFORMANCE: Your plan's investment options may include the VantageTrust Funds ("VT Funds") which are collective investment trust funds that are exempt from SEC registration as a mutual fund, are not listed on any public exchange, and do not have a ticker symbol. Note, however, that a certain subset of the VT Funds invest their assets in third-party registered mutual funds that have a ticker symbol. Reference to such underlying mutual funds, including reference to ticker symbols or other non-performance data, by VT Funds is for reference only and NOT reflective of the returns or fees of the corresponding VT Funds available in your plan. VT Funds will typically have certain recordkeeping and administrative fees that are in addition to the underlying mutual fund's fees. These fees will reduce the performance of the VT Fund when compared to the underlying mutual fund performance. VT Fund performance net of fees is provided just prior to disclosures at the end of this section of the brochure.

Monitoring Criteria for Investments

As of September 30, 2018

Annualized Performance

- 1 Year Return Rank is less than or equal to 50% of investments in category.
- 3 Year Return Rank is less than or equal to 50% of investments in category.
- 5 Year Return Rank is less than or equal to 50% of investments in category.

Risk

- 5 Year Beta Rank is less than or equal to 50% of investments in category.

Risk Adjusted Performance

- 5 Year Alpha Rank is less than or equal to 50% of investments in category.

Style

- 3 Year R-Squared Rank is greater than or equal to 75% of investments in category.

Category Assignment

- Morningstar Category Change (over last 12 months) is equal to No.

Ratings

- Overall Morningstar Rating is greater than or equal to 3 stars.

Expenses

- Net Expense Ratio Rank is less than or equal to 45% of investments in category.

Manager Details

- Total Assets are greater than or equal to \$200 million.
- Years Since Inception is greater than or equal to 3 years.
- Manager Tenure is greater than or equal to 2 years.

Monitoring criteria are based on investment policy criteria for metrics covered by this service that were provided by the plan sponsor or their designee to ICMA-RC. The criteria do not constitute a proprietary rating method. Commentary on fund performance in relation to specific criteria was provided by UpTick Data Technologies. The Glossary contains definitions of metrics monitored by this service.

Gross / Net Expense Ratio: 0.78 / 0.72

Four of the plan's twelve investment monitoring standards have not been realized. The Requirements not met by the fund are:

- One- and five-year performances
- Five-year Alpha
- Net Expense Ratio

Monitoring criteria are based on investment policy criteria for metrics covered by this service that were provided by the plan sponsor or their designee to ICMA-RC. The criteria do not constitute a proprietary rating method. Commentary on fund performance in relation to specific criteria was provided by UpTick Data Technologies. The Glossary contains definitions of metrics monitored by this service.

For each mutual fund and exchanged-traded fund with at least a three-year history, Morningstar calculates a Morningstar Rating based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a fund's monthly performance (including the effects of sales charges, loads and redemption fees), placing more emphasis on downward variations and rewarding consistent performance. The top 10% of funds in each category receive five stars, the next 22.5% receive four stars, the next 35% receive three stars, the next 22.5% receive two stars and the bottom 10% receive one star. For mutual funds, each share class is counted as a fraction of one fund within this scale and rated separately, which may cause slight variations in the distribution percentages. The overall Morningstar Rating for a fund is derived from a weighted average of the performance figures associated with a fund's three-, five-, and ten-year (if applicable) Morningstar Rating metrics. Past performance is no guarantee of future results. In the case of VantageTrust Funds, the ratings provided are for the underlying fund in which the VantageTrust Fund invests substantially all of its assets. Information on Separate Accounts is generally not available. Data on Exchange Traded Funds may not be available.

Performance data quoted is historical. Past performance does not guarantee future results. Current performance may be higher or lower than the performance quoted. You can obtain performance data current to the most recent month-end for each fund in the chart by calling the toll-free number indicated beneath the name of each fund. The investment return and principal value of an investment will fluctuate such that an investor's shares, when redeemed, may be worth more or less than their original cost. Total returns include reinvestment of dividends and capital gains and are net of all fees and expenses.

* Performance figures are based on Net Asset Value (NAV) within a qualified retirement plan. If an individual were to purchase shares outside of a qualified plan, they would likely be subject to all, or a portion of, these sales charges. These charges would lower the performance indicated above.

The fund's total-return percentile rank is for the specified period relative to all funds that have the same Morningstar category. The highest (or most favorable) percentile rank is 1 and the lowest (or least favorable) percentile rank is 100. The top-performing fund in a category will always receive a rank of 1. Morningstar category rankings are based on the total return for periods stated with the dividends reinvested and capital gains and do not take into account or reflect sales charges. In the case of VantageTrust Funds, the rankings provided are for the underlying fund in which the VantageTrust Fund invests substantially all of its assets.

Morningstar provides adjusted historical returns for some mutual funds in its universe. Morningstar computes the funds' return stream by appending an adjusted return history of the oldest share class of the fund. Refer to the Disclosures for important Pre-Inception Returns disclosure information. A Benchmark Index is an unmanaged combination of securities used to measure and report performance of various sectors of the stock market. It is not possible to invest directly in an index.

Performance data quoted is historical. Past performance does not guarantee future results. Current performance may be higher or lower than the performance quoted. You can obtain performance data current to the most recent month-end for each fund in the chart by calling the toll-free number indicated beneath the name of each fund. The investment return and principal value of an investment will fluctuate such that an investor's shares, when redeemed, may be worth more or less than their original cost. Total returns include reinvestment of dividends and capital gains and are net of all fees and expenses.

* Performance figures are based on Net Asset Value (NAV) within a qualified retirement plan. If an individual were to purchase shares outside of a qualified plan, they would likely be subject to all, or a portion of, these sales charges. These charges would lower the performance indicated above.

The fund's total-return percentile rank is for the specified period relative to all funds that have the same Morningstar category. The highest (or most favorable) percentile rank is 1 and the lowest (or least favorable) percentile rank is 100. The top-performing fund in a category will always receive a rank of 1. Morningstar category rankings are based on the total return for periods stated with the dividends reinvested and capital gains and do not take into account or reflect sales charges. In the case of VantageTrust Funds, the rankings provided are for the underlying fund in which the VantageTrust Fund invests substantially all of its assets.

Morningstar provides adjusted historical returns for some mutual funds in its universe. Morningstar computes the funds' return stream by appending an adjusted return history of the oldest share class of the fund. Performance data quoted is historical. Past performance does not guarantee future results. Current performance may be higher or lower than the performance quoted. You can obtain performance data current to the most recent month-end for each fund in the chart by calling the toll-free number indicated beneath the name of each fund. The investment return and principal value of an investment will fluctuate such that an investor's shares, when redeemed, may be worth more or less than their original cost. Total returns include reinvestment of dividends and capital gains and are net of all fees and expenses.

* Performance figures are based on Net Asset Value (NAV) within a qualified retirement plan. If an individual were to purchase shares outside of a qualified plan, they would likely be subject to all, or a portion of, these sales charges. These charges would lower the performance indicated above.

The fund's total-return percentile rank is for the specified period relative to all funds that have the same Morningstar category. The highest (or most favorable) percentile rank is 1 and the lowest (or least favorable) percentile rank is 100. The top-performing fund in a category will always receive a rank of 1. Morningstar category rankings are based on the total return for periods stated with the dividends reinvested and capital gains and do not take into account or reflect sales charges. In the case of VantageTrust Funds, the rankings provided are for the underlying fund in which the VantageTrust Fund invests substantially all of its assets.

Morningstar provides adjusted historical returns for some mutual funds in its universe. Morningstar computes the funds' return stream by appending an adjusted return history of the oldest share class of the fund. Refer to the Disclosures for important Pre-Inception Returns disclosure information. A Benchmark Index is an unmanaged combination of securities used to measure and report performance of various sectors of the stock market. It is not possible to invest directly in an index.

Performance data quoted is historical. Past performance does not guarantee future results. Current performance may be higher or lower than the performance quoted. You can obtain performance data current to the most recent month-end for each fund in the chart by calling the toll-free number indicated beneath the name of each fund. In the case of VantageTrust Funds, the phone number provided is for the underlying fund in which the VantageTrust Fund invests substantially all of its assets.

The investment return and principal value of an investment will fluctuate such that an investor's shares, when redeemed, may be worth more or less than their original cost. Total returns include reinvestment of dividends and capital gains and are net of all fees and expenses.

Performance figures are based on Net Asset Value (NAV) within a qualified retirement plan.

A Benchmark Index is an unmanaged combination of securities used to measure and report performance of various sectors of the stock market. It is not possible to invest directly in an index.

Morningstar provides adjusted historical returns for some mutual funds in its universe. Morningstar computes the funds' return stream by appending an adjusted return history of the oldest share class of the fund. Refer to the Disclosures for important Pre-Inception Returns disclosure information.

Performance figures are based on Net Asset Value (NAV) within a qualified retirement plan.

A Benchmark Index is an unmanaged combination of securities used to measure and report performance of various sectors of the stock market. It is not possible to invest directly in an index.

Morningstar provides adjusted historical returns for some mutual funds in its universe. Morningstar computes the funds' return stream by appending an adjusted return history of the oldest share class of the fund. Refer to the Disclosures for important Pre-Inception Returns disclosure information.

Section III: Fees & Expenses

Fund past performance, as shown, is no guarantee of how the Fund will perform in the future. The performance shown has been annualized for periods greater than one year. Investment returns and principal value will fluctuate, so that an investor's shares, when redeemed, may be worth more or less than their original cost. For current performance, visit www.icmarc.org.

Please read the fund's prospectus or disclosure materials carefully for a complete summary of all fees, expenses, investment objectives and strategies, risks, financial highlights, and performance information. Investing involves risk, including possible loss of the amount invested. Investors should carefully consider the information contained in the prospectus or disclosure materials before investing. To request a prospectus or disclosure materials, you may contact us by calling 800-669-7400, emailing investorservices@icmarc.org, or visiting www.icmarc.org.

IMPORTANT NOTICE REGARDING USE OF TICKER SYMBOLS UNDERLYING VT FUND PERFORMANCE: Your plan's investment options may include the VantageTrust Funds ("VT Funds") which are collective investment trust funds that are exempt from SEC registration as a mutual fund, are not listed on any public exchange, and do not have a ticker symbol. Note, however, that a certain subset of the VT Funds invest their assets in third-party registered mutual funds that have a ticker symbol. Reference to such underlying mutual funds, including reference to ticker symbols or other non-performance data, by VT Funds is for reference only and NOT reflective of the returns or fees of the corresponding VT Funds available in your plan. VT Funds will typically have certain recordkeeping and administrative fees that are in addition to the underlying mutual fund's fees. These fees will reduce the performance of the VT Fund when compared to the underlying mutual fund performance. VT Fund performance net of fees is provided just prior to disclosures at the end of this section of the brochure.

Performance data quoted is historical. Past performance does not guarantee future results. Current performance may be higher or lower than the performance quoted. You can obtain performance data current to the most recent month-end for each fund in the chart by calling the toll-free number indicated beneath the name of each fund. The investment return and principal value of an investment will fluctuate such that an investor's shares, when redeemed, may be worth more or less than their original cost. Total returns include reinvestment of dividends and capital gains and are net of all fees and expenses.

* Performance figures are based on Net Asset Value (NAV) within a qualified retirement plan. If an individual were to purchase shares outside of a qualified plan, they would likely be subject to all, or a portion of, these sales charges. These charges would lower the performance indicated above.

The fund's total-return percentile rank is for the specified period relative to all funds that have the same Morningstar category. The highest (or most favorable) percentile rank is 1 and the lowest (or least favorable) percentile rank is 100. The top-performing fund in a category will always receive a rank of 1. Morningstar category rankings are based on the total return for periods stated with the dividends reinvested and capital gains and do not take into account or reflect sales charges. In the case of VantageTrust Funds, the rankings provided are for the underlying fund in which the VantageTrust Fund invests substantially all of its assets.

Morningstar provides adjusted historical returns for some mutual funds in its universe. Morningstar computes the funds' return stream by appending an adjusted return history of the oldest share class of the fund. Refer to the Disclosures for important Pre-Inception Returns disclosure information. A Benchmark Index is an unmanaged combination of securities used to measure and report performance of various sectors of the stock market. It is not possible to invest directly in an index.

For each mutual fund and exchanged-traded fund with at least a three-year history, Morningstar calculates a Morningstar Rating based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a fund's monthly performance (including the effects of sales charges, loads and redemption fees), placing more emphasis on downward variations and rewarding consistent performance. The top 10% of funds in each category receive five stars, the next 22.5% receive four stars, the next 35% receive three stars, the next 22.5% receive two stars and the bottom 10% receive one star. For mutual funds, each share class is counted as a fraction of one fund within this scale and rated separately, which may cause slight variations in the distribution percentages. The overall Morningstar Rating for a fund is derived from a weighted average of the performance figures associated with a fund's three-, five-, and ten-year (if applicable) Morningstar Rating metrics. Past performance is no guarantee of future results. In the case of VantageTrust Funds, the ratings provided are for the underlying fund in which the VantageTrust Fund invests substantially all of its assets. Information on Separate Accounts is generally not available. Data on Exchange Traded Funds may not be available.

Fees & Expenses

The Expense Ratio is a fund's total annual operating expenses (including management fees, distribution fees, and other expenses) revealed as a percentage of the fund's average net assets. The compensation arrangement for this plan may or may not allow for payment of 12b-1 fees by the fund to ICMA-RC or one of its affiliates.

Section V: Fund Profiles

Fund past performance, as shown, is no guarantee of how the Fund will perform in the future. The performance shown has been annualized for periods greater than one year. Investment returns and principal value will fluctuate, so that an investor's shares, when redeemed, may be worth more or less than their original cost. For current performance, visit www.icmarc.org.

Please read the fund's prospectus or disclosure materials carefully for a complete summary of all fees, expenses, investment objectives and strategies, risks, financial highlights, and performance information. Investing involves risk, including possible loss of the amount invested. Investors should carefully consider the information contained in the prospectus or disclosure materials before investing. To request a prospectus or disclosure materials, you may contact us by calling 800-669-7400, emailing investorservices@icmarc.org, or visiting www.icmarc.org.

IMPORTANT NOTICE REGARDING USE OF TICKER SYMBOLS UNDERLYING VT FUND PERFORMANCE: Your plan's investment options may include the VantageTrust Funds ("VT Funds") which are collective investment trust funds that are exempt from SEC registration as a mutual fund, are not listed on any public exchange, and do not have a ticker symbol. Note, however, that a certain subset of the VT Funds invest their assets in third-party registered mutual funds that have a ticker symbol. Reference to such underlying mutual funds, including reference to ticker symbols or other non-performance data, by VT Funds is for reference only and NOT reflective of the returns or fees of the corresponding VT Funds available in your plan. VT Funds will typically have certain recordkeeping and administrative fees that are in addition to the underlying mutual fund's fees. These fees will reduce the performance of the VT Fund when compared to the underlying mutual fund performance. VT Fund performance net of fees is provided just prior to disclosures at the end of this section of the brochure.

Vantagepoint Inflation Focused R5 (F00000Q8IG)

Morningstar Rating: ★★

Fund Profile

For the Period Ending: Sep 30, 2018

Fund Information

Date of Inception: 03/01/1999
Fund Assets: \$204.26 (Mil)
Morningstar Category: Inflation-Protected Bond
Net Expense Ratio: 0.61 **Gross Expense Ratio:** 0.61
Max. Sales Charge: --

Section VI: Glossary

Glossary of Terms

12b-1

The maximum annual charge deducted from fund assets to pay for distribution and marketing costs.

Alpha

Alpha is a measure of the difference between a holding's actual returns and its level of risk as measured by beta. Morningstar bases alpha on a least-squares regression of the holding's (or hypothetical portfolio's) excess return over the 90 day Treasury-bill compared with the excess return of the fund's benchmark index (the S&P 500 for equity and the Lehman Brothers Aggregate Bond index for fixed income). A positive alpha indicates that the fund has performed better than its beta predicts. A negative alpha indicates underperformance given the holding's beta.

Batting Average

A statistical calculation used to measure an investment manager's ability to meet or beat an index. Batting average is calculated by dividing the number of months (or days, quarters, etc.) in which the manager beats or matches the index by the total time period being referenced and multiplying that factor by 100.

Balanced / Asset Allocation

A mutual fund that has an investment mandate of "balancing" or mixing the investment classes—equities, fixed income and cash—in its portfolio holdings. The appropriate balance is based on the anticipated return and relative risk of each asset category as well as the investor's personal factors such as risk tolerance, age, current asset allocation and asset level, or according to the fund's investment outlook.

Benchmark Index (abbreviated BM)

A benchmark index gives the investor a point of reference for evaluating a fund's performance. A benchmark can be a broad or market-segment of the stock or fixed income markets and is a statically indicator or standard against which the performance or value of individual investments can be measured against.

(Description of benchmark indices can be found in the Benchmark Definitions section of report)

Beta

Beta measures the fund's market risk. Morningstar calculates beta using the same regression equation as the one used for alpha, which regresses excess return for the fund against the benchmark index. The beta of the market is 1.00. Accordingly, a fund with a 1.10 beta is expected to perform 10% better than the market in up markets and 10 % worse in down markets. Conversely, a beta of 0.85 indicates that the fund is expected to perform 15% worse than the market in up markets and 15% better in down markets. Note: A low beta does not imply a low level of volatility; rather, it means that the holding's market-related risk is low.

Bonds

At their most basic, bonds are loans.

A bond is a debt instrument with period of greater than one year . The purpose is to raise capital. All bonds require the repayment of the principal (issued amount) at a specified date. Most bonds, but not all, require the payment of interest. Unlike equities the bond does not confer ownership rights from the issuer to holder (investor).

There are two basic types of bonds: government bonds and corporate bonds. U.S. government bonds (also known as T-bills or Treasuries) are issued and guaranteed by the US government. They usually offer a lower return with low risk. Municipal and state governments also issue

bonds. Corporate bonds are issued by companies and carry a higher degree of risk (should the company default) as well as return.

Interest rate sensitivity and credit risk influence the pricing and performance of bonds and bond funds.

Cash/Cash Equivalent

Cash refers to short-term, safe investments that can be converted to cash relatively quickly. Examples include savings accounts, money-market accounts, commercial paper, short-term CDs, Treasury bills, short-term commercial paper and short-term municipal and corporate bonds and notes. Receivables are also considered a cash equivalent. While safe, investments in cash or cash equivalents typically do not earn as much as stocks or bonds. Cash is the most liquid form of an investment.

Risks: Returns may barely keep up with inflation, making them poor vehicles for long-term growth.

Category

The category or group a fund has been assigned based on what it owns, as well as by its prospectus objectives and styles. Also known as peer group. A fund's category identifies funds based on their actual investment styles as measured by their underlying portfolio holdings. By assigning funds to appropriate buckets for use in grouping similar funds, more appropriate "apples to apples" comparisons can be made.

Closed to All Investment

Funds that are accepting no investments whatsoever, even from current shareholders.

Closed to New Investment

If funds are closed to new investments, they are not accepting new shareholder investments. This does not, however, restrict current shareholders from increasing their investment amount.

Glossary of Terms

Common Stock

Securities representing shares of ownership of a corporation (see Stock).

Core Investment Options

Your core line-up provides you with a variety of investments from which to choose, ranging in objective from capital preservation to growth. Each of the core investments consists primarily of one of the different building blocks, which are usually referred to as asset classes (equities, bonds and cash equivalents).

Derivatives

A financial instrument, traded on or off an exchange, the price of which is directly dependent upon the value of one or more underlying securities, equity indices, debt instruments, commodities, other derivative instruments, or any agreed upon pricing index or arrangement. Derivatives involve the trading of rights or obligations based on the underlying product but do not directly transfer property. They are used to hedge risk or to exchange a floating rate of return for a fixed rate of return. They are often more volatile than other investments and may magnify a fund's gains or losses.

Diversification

Diversification is investing in multiple investments to help limit risk. The concept of "not putting all your eggs into one basket". Diversification does not ensure a profit nor protect against loss in declining markets.

ETF

ETF or exchange traded fund describes the broad class of funds, excluding closed-end funds, which trade throughout the day over an exchange. Compared to open-end mutual funds, ETFs have lower annual expenses, but they are purchased

like equities - commissions are paid to trade them. ETFs do not need to sell securities (possibly realizing capital gains) to pay investors who redeem their shares and thus are typically more tax-efficient than mutual funds. ETFs market prices usually closely track their NAVs. Most ETFs are index funds.

Expense Ratio

The expense ratio is the annual fee that all funds or ETFs charge their shareholders. It expresses the percentage of assets deducted each fiscal year for fund expenses, including 12b-1 fees, management fees, administrative fees, operating costs, and all other asset-based costs incurred by the fund.

Portfolio transaction fees, or brokerage costs, as well as initial or deferred sales charges are not included in the expense ratio. The expense ratio, which is deducted from the fund's average net assets, is accrued on a daily basis.

If the fund's assets are small, its expense ratio can be quite high because the fund must meet its expenses from a restricted asset base.

Conversely, as the net assets of the fund grow, the expense percentage should ideally diminish as expenses are spread across the wider base. Funds may also opt to waive all or a portion of the expenses that make up their overall expense ratio.

Extended Performance Rating

Morningstar provides adjusted historical returns and an Extended Performance Rating for some mutual funds in its universe. This means that any share class that doesn't have a 1, 3-, 5-, or 10-year performance history may receive a hypothetical Morningstar Rating based on the oldest surviving share class of the fund. First, Morningstar computes the funds' new return stream by appending an adjusted return history of the oldest share class.

Next, the Extended Performance Rating is determined by comparing the adjusted-historical returns to the current open-end mutual fund universe to identify placement in the bell curve used to assign the Morningstar Rating.

Fiduciary

Fiduciary indicates the relationship of trust and confidence where one person (the fiduciary) holds or controls property for the benefit of another person, for example, the relationship between a trustee and the beneficiaries of the trust. Under ERISA, fiduciaries must discharge their duties solely in the interest of the participants and beneficiaries of an employee benefit plan.

Fixed Income Securities/Bonds

Fixed income securities/bonds are securities that pay a fixed rate of interest or a fixed dividend. There are many different types of fixed income securities or bonds, including: corporate bonds or notes, mortgage-backed securities, asset-backed securities, convertible securities, government obligations, "junk" or below investment grade bonds, investment grade securities, and foreign bond securities. *Risks:* Return of principal is not guaranteed. Bond funds have the same interest rate, inflation, and credit risks that are associated with the underlying bonds owned by the fund. Generally, the value of bond funds rises when prevailing interest rates fall and falls when interest rates rise. There are ongoing fees and expenses associated with owning shares of bond funds.

Important note on Junk Bonds: Non-investment grade debt securities, commonly referred to as high-yield or "junk" bonds, may be subject to greater market fluctuations and risk of loss of income and principal than securities in higher rating categories.

Glossary of Terms

Fixed Income Blend

Fixed income securities that are not classified by maturity.

Foreign Equity

Securities trading primarily in markets outside the United States that represent equity ownership in a company. *Risks:* Investments in foreign securities involve special risks, including foreign currency risk and the possibility of substantial volatility due to adverse political, economic or other developments. These risks are magnified for investments made in emerging markets.

Gross Expense Ratio

The gross expense ratio is the fund's expense ratio before taking into account any fee waivers or expense reimbursements.

Growth of 10,000

The Growth of \$10,000 graph shows a fund's performance based on how \$10,000 invested in the fund would have grown over time. The growth of \$10,000 begins at the fund's inception, or the first year listed on the graph, whichever is appropriate. Located alongside the fund's graph line are lines that represent the growth of \$10,000 in the fund's category and its market benchmark. The growth is a hypothetical valuation based on the average return for the fund's Morningstar category over the displayed time periods.

Inception Date

The Inception date is the date the fund was formed and became available for sale to investors.

Information Ratio

A measure of the consistency of excess return. This value is determined by taking the annualized excess return over a benchmark (style benchmark by default) and dividing it by the standard deviation of excess return (tracking error). The measure relates the magnitude and consistency with which an investment outperformed its benchmark. The higher the information ratio, the better.

Management Fee

Taken from the fund's prospectus, this represents the cost of the fund's manager's services and other fund administration costs. It is usually represented as a percentage of assets.

Although management costs are listed in a fund's prospectus, these are maximum amounts and funds may waive a portion, or possibly all, of those fees. Actual fees thus represent a closer approximation of the true costs to shareholders.

Management Style — Growth vs. Value

Growth Funds

Growth funds hold stocks of companies that the fund manager believes will have significantly better revenue and profit growth than the overall market.

Value Funds

Value funds concentrate on stocks of companies that the fund manager believes to be currently undervalued in the markets. The managers buy the stock at what they believe to be less than the true value, with the expectation that the price will rise.

Blend Funds

Blend funds represent a blend of growth and value styles.

Manager Tenure

This represents the number of years that the current manager has been the portfolio manager of the fund. A fund may be managed by more than one manager. For funds with more than one manager, the average tenure is shown. If the fund designates the manager as a Management Team and does not disclose the names of the portfolio manager or co-portfolio managers to Morningstar, Manager Tenure will appear as a dash for the fund.

Market Capitalization

One way to classify equity funds is by market capitalization, which is the market value of the company. This is calculated by multiplying the total number of a company's shares by the current price per share. Generally, market capitalization is associated with the size of the company¹.

Large Cap

This generally refers to the stock of companies with market capitalizations over \$5 billion. These seasoned companies, sometimes referred to as "blue-chips" in the U.S., often have long histories of solid returns. While large cap stocks tend to be relatively stable compared with other stocks, they do carry a degree of risk.

Mid Cap

With market capitalizations that generally range between \$2 billion and \$5 billion, these stocks can be more volatile than large cap stocks, but have the potential for higher relative returns.

¹ Please note that the definitions of small, mid, and large cap companies illustrated here are generalizations only, and are subject to change. In addition, individual mutual fund managers may use different definitions for specific funds. You are encouraged to read the prospectus carefully to determine the market capitalization specifications of any individual mutual fund.

Glossary of Terms

Because mid-capitalization stock prices have experienced a greater degree of market volatility than large-capitalization stock prices, investors should consider the fund for long-term investment and should bear in mind that the higher return potential of mid-capitalization stocks is accompanied by additional business risk, significant stock price fluctuations and illiquidity.

Small Cap

With market capitalizations of less than \$2 billion, companies in this category often are new companies with short histories. Because small-capitalization stock prices have experienced a greater degree of market volatility than those of large-capitalization stocks, investors should consider funds that invest in small-cap stocks for long-term investment and should bear in mind that the higher return potential of small-capitalization stocks is accompanied by higher risk.

Maximum Sales Charge

The sales charge, or load as it is also called, is a fee the investor may pay when purchasing shares of a mutual fund from a broker as compensation for their advice. The rate varies from fund company to fund company and is detailed in the fund's prospectus. The maximum sales charge is the highest amount that an investor may pay for a particular fund.

Money Market Fund

Mutual fund that invests primarily in low-risk, short-term investments such as treasury bills, government securities, certificates of deposit and other highly liquid, safe securities.

Money Market Securities

Securities that seek to maintain a \$1 NAV. However the achievement of that objective cannot be guaranteed.

Morningstar Rating

The Morningstar Risk-Adjusted Rating, commonly referred to as the Star Rating, relates the risk-adjusted performance of a fund to its **peers in the category**. Morningstar calculates ratings only for categories with at least 20 funds. To determine a fund's rating, the fund and its peers are ranked by their MRARs. If a fund scores in the top 10% of its fund category, it receives five stars (High); if it falls in the next 22.5%, it receives four stars (Above Average); a place in the middle 35% earns a fund three stars (Neutral or Average); those in the next 22.5% receive two stars (Below Average); and the lowest 10% get one star (Low). Morningstar also accounts for instances where a fund is sold in multiple versions, whether multi-class, both trust and segregated, etc. In order to prevent one fund from unfairly taking up many places in a portion of the ratings scale, Morningstar treats multiple versions of a fund as "fractional funds". The multiple versions of a fund are all rated, but they collectively count as one and so leave more room for other deserving funds.

The overall Star Rating for a fund is a weighted combination of its three, five, and ten year ratings. If a fund has less than three years' performance history, it is not rated. If it has at least three but less than five years' history, its overall rating is equal to its three-year rating. If it has at least five but less than ten years' history, its overall rating is equal to 60% five-year rating and 40% three-year rating. If it has at least ten years' history, its overall rating is equal to 50% ten-year rating, 30% five-year rating and 20% three-year rating.

Morningstar Risk-Adjusted Ratings are recalculated monthly.

Net Expense Ratio

The net expense ratio is the fund's expense ratio less any expense waivers or reimbursements provided by the fund's manager. Because the expense ratio is calculated by dividing the total costs of the fund by its total assets, funds with

relatively small total assets will have higher expense ratios than larger funds. As a result, fund managers will offer expense waivers or reimburse costs to the fund for a predetermined length of time so that the fund is not at a competitive disadvantage when its expense ratio is compared to its peers.

Non-Core Investment Options

Your non-core investment options are intended to provide additional investment flexibility to investors who desire a wider range of choices. The choices also range in asset classes allowing more opportunity for diversification.

Non-Diversified Funds

Some funds are non-diversified, which means that they may invest more of their assets in fewer companies than if they were diversified funds. By concentrating in a smaller number of investments, the fund's risk is increased because each investment has a greater effect on the fund's performance.

Peers in the Category

(See Morningstar Rating)

Percentile/Percentile Rank

A percentile is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it.

So if we calculate a 50th percentile, 50% of the time the returns are below that resulting value and 50% of the time they are above that value. A 50th percentile is the same as a "median." An average, or "mean," is similar but a weighted result.

Plan Watch List

Funds can be placed on the plan's watch list at the discretion of the plan advisor usually for failing to meet or adhere to the Investment Policy Statement of the plan.

Glossary of Terms

Prospectus

The fund's written statement, generally issued on an annual basis. In this statement the fund sets forth its proposed purposes and goals, and other facts (e.g., history and investment objective) that an investor should know in order to make an informed decision. Information pertaining to management fees and other charges and expenses are in the prospectus.

R-Squared

The percentage of a fund's movements that are explained by movements in its benchmark index. An R-Squared of 100 means that all movements of a fund are explained by movements in its benchmark index. Index funds often will have an R-Squared very close to 100.

Real Estate Funds

Because these funds concentrate their investments in securities of companies operating in the real estate industry, they are susceptible to the risks associated with the real estate industry. These include: fluctuations in the value of underlying properties; defaults by borrowers or tenants; market saturation; property taxes; capital expenditures or operating expenses; and other economic, political, or regulatory occurrences affecting the real estate industry.

Redemption Fee

The redemption fee is an amount charged when money is withdrawn from a fund. This fee does not go back into the pockets of the fund company but rather into the fund itself and does not represent a net cost to shareholders.

Also, unlike contingent deferred sales charges, redemption fees typically operate only in short, specific time periods, commonly 30, 180, or 365 days. However, some redemption fees exist for up to five years. Charges are not imposed after the

stated time has passed. These fees are typically imposed to discourage market-timers, whose quick movements into and out of funds can be disruptive. The charge is normally imposed on the ending share value, appreciated or depreciated from the original value.

Sector Funds

A distinct subset of a market, society, industry, or economy, whose components share similar characteristics. Stocks are often grouped into different sectors depending upon the company's business. *Risks:* Funds that emphasize certain market sectors are subject to additional risks and may be more volatile than an investment with greater diversification.

Sharpe Ratio

A risk-adjusted measure developed by Nobel Laureate William Sharpe. It is calculated by using standard deviation and excess return to determine reward per unit of risk. The higher the Sharpe Ratio, the better the fund's historical risk-adjusted performance. The Sharpe Ratio is calculated for the past 36-month period by dividing a fund's annualized excess return by the standard deviation of the fund's annualized excess returns.

Specialty / Other

The "Specialty/Other" category includes sector, industry-based and other non-diversified funds.

Stable Value Fund

A unique asset class offering defined contribution plan participants intermediate term returns and liquidity (subject to plan rules) with low market value risk. This is typically accomplished through a wrap contract or investment contract that guarantees the payment of plan-related benefits at book value (cost plus accrued interest) which enables the entire investment to be carried at its book value.

Standard Deviation

A statistical measure of the range of performance within which the total returns have fallen. The standard deviation shown in this report is an annualized statistic based on returns over the past 36 months. When a fund has a high deviation figure, the range of performance is very wide, indicating a greater potential for volatility. Approximately 68% of the time, the fund's total return will be within plus or minus one deviation from the fund's 3-year return. Also, 95% of the time the fund's total return will be within plus or minus two times the standard deviation (sometimes described as being within "two standard deviations") from the average return. Standard deviation is also a component in the Sharpe Ratio, which assesses risk-adjusted performance.

Stocks (Equities)

Stocks, or "equities," are essentially ownership shares in a company. The more shares you own, the greater your stake in that company.

Risks: While stocks generally provide the most growth potential, they tend to experience greater volatility in price. For this reason, stocks are generally considered to be riskier investments. If you choose to invest in stocks, be sure you understand and are willing to accept these risks, including a possible loss of principal.

Style

The description of the type of approach and strategy utilized by an investment manager to manage funds. The style is determined by, as an example for equities, portfolio characteristics such as: market capitalization of issues, price to earnings ratio and dividend yield. Some equity styles include Growth, Value, Yield, Core and Small Cap.

Glossary of Terms

Style Drift

The propensity of some mutual funds to migrate from one Morningstar classification to another. Style drift happens when an active manager drifts from a specific style, asset class, or index that is described as the fund's investment purpose.

Target Date Funds

An investment in a target date fund is subject to the risks attendant to the underlying funds in which it invests. A target date fund is geared to investors who will retire and/or require income at an approximate year. The fund is managed to meet the investor's goals by the pre-established year or "target date"; hence, the name target date fund. A target date fund will transition its invested assets from a more aggressive portfolio to a more conservative portfolio as the target date draws closer. An investment in the Target Retirement Fund is not guaranteed at any time, including, before or after the target date is reached.

Technology Funds

Technology securities in general tend to be relatively volatile as compared with other types of investments. While volatility may create investment opportunities, it does entail risk. Funds that invest exclusively in one sector of the economy carry additional risk resulting from lack of industry diversification. The fund should not be considered as a balanced investment program.

Top 10 Holdings

The ten largest investments in the entire fund's portfolio.

Tracking Error

Tracking Error measures how closely a fund manager follows a benchmark index. It is measured as the standard deviation of the difference between the manager's return and the benchmark return.

Treynor Ratio (or Index)

Similar to Sharpe Ratio, the Treynor Ratio is a measurement of efficiency utilizing the relationship between annualized risk-adjusted return and risk. It is a measure of a portfolio's excess return per unit of risk. Unlike Sharpe Ratio, the Treynor Ratio utilizes "market" risk (beta) instead of total risk (standard deviation). Good performance efficiency is measured by a high ratio risk premium earned per unit of risk taken.

Turnover Ratio

A measure of the fund's trading activity, which is computed by taking the lesser of purchases or sales and dividing by average monthly net assets. Securities with maturities of less than one year are excluded. The figure is gathered from the financial highlights of the fund's annual report

A low turnover figure (20% to 30%) generally indicate a buy-and-hold strategy. Higher turnover (more than 100%) would indicate an more active investment strategy involving considerable buying and selling of securities.

Upside and Downside Capture Ratio

A statistical measure used to demonstrate whether a given fund has outperformed or underperformed more than a broad market benchmark during periods of market strength and weakness.

Upside capture ratios for funds are calculated by taking the fund's monthly return during months when the benchmark had a positive return and dividing it by the benchmark return during that same month. Downside capture ratios are calculated by taking the fund's monthly return during the periods of negative benchmark performance and dividing it by the benchmark return.

An upside capture ratio over 100 indicates a fund has generally outperformed the benchmark during periods of positive returns for the benchmark. A downside capture ratio of less than 100 indicates that a fund has lost less than its benchmark in periods when the benchmark has been in the red. If a fund generates positive returns, however, while the benchmark declines, the fund's downside capture ratio will be negative (meaning it has moved in the opposite direction of the benchmark).

Section VII: Disclosure

Disclosure

As of September 30, 2018

Primary Risk Disclosure

The funds that are available in this Plan may have primary risks that are specifically associated with the individual funds. Those risks are detailed below and on the following pages. The primary risks associated with each individual fund are shown by identifying number on the page that summarizes investment performance. Investments in mutual funds may lose value and prices can fluctuate over time.

Market Risk - Common stock prices can fluctuate over a wide range in the short term or over extended periods of time. These price fluctuations may result from factors affecting individual companies, industries, or the securities market as a whole. There is no guarantee that the stock market or that the stock that the Fund holds will increase in value.

Small and Mid-Cap Asset Class Risk - The small or medium capitalization companies the Fund invests in may be more vulnerable to adverse business or economic events than larger, more established companies. In particular, these companies may have limited product lines, markets and financial resources, and may depend upon a relatively small management group. Therefore, these stocks may be more volatile than those of larger companies.

Value-Oriented Investment Style Risk - The Advisor's approach may be out of favor at times, causing the Fund to under-perform funds that also seek capital appreciation but use different approaches to the stock selection and portfolio construction process. Specifically, the out-of-favor and undervalued companies the Fund invests in may be more vulnerable to negative investor sentiment or adverse business or economic events than more growth-oriented companies.

Growth-Oriented Investment Style Risk - A principal risk of growth stocks is that investors expect growth companies to increase their earnings at a certain rate that is generally higher than the rate expected for non-growth companies. If a growth company does not meet these expectations, the price of its stock may decline significantly, even if it has increased earnings. Growth companies also typically do not pay dividends. Companies that pay dividends often have lesser stock price declines during market downturns.

Foreign Securities - Foreign investments involve additional risks including currency rate fluctuations, political and economic instability, differences in financial reporting standards, less stringent regulation of securities markets, regional risk—which is the chance that an entire region—for example, the European or Pacific region—will be hurt by political upheaval, financial troubles, or natural disasters, currency risk. This is a risk that fluctuations in the exchange rates between the U.S. Dollar and foreign (non-U.S.) currencies may negatively affect the value of a Fund's investments or reduce the returns of a Fund. Some foreign markets are considered emerging markets. Investment in these emerging markets subjects a Fund to a greater risk of loss than investments in a developed market. **Sovereign Debt** - The Fund invests in sovereign debt securities. These investments are subject to the risk that a governmental entity may delay or refuse to pay interest or repay principal on its sovereign debt, due, for example, to cash flow problems, insufficient foreign currency reserves, political considerations, the relative size of the governmental entity's debt position in relation to the economy or the failure to put in place economic reforms required by the International Monetary Fund or other multilateral agencies.

Interest Rate Risk - The Fund is subject to the risk that the market value of the bonds it holds will decline due to rising interest rates. When interest rates rise, the prices of most bonds go down. The price of a bond is also affected by its maturity. Bonds with longer maturities generally have greater sensitivity to changes in interest rates. Falling interest rates will cause the Fund's income to decline if the Fund reinvests its assets at the lower rate. Income risk is generally higher for short term bonds.

Credit Risk - Individual issues of fixed-income securities may be subject to the credit risk of the issuer. This means that the underlying company may experience unanticipated financial problems causing it to be unable to meet its payment obligations. Credit risk is particularly significant for debt securities that are rated below investment grade. These debt securities are predominantly speculative with respect to the issuer's continuing ability to pay interest or principal. Lower grade securities have less liquidity and higher incidence of default than higher grade securities.

Maturity Risk - Generally, fixed income securities will decrease in value if interest rates rise and will increase if interest rates decline. Longer-term securities are generally more volatile, so the average maturity or duration of these securities affects risk.

Disclosure

As of September 30, 2018

Government Obligations Risk - No assurance can be given, with respect to fund investments in securities issued by the U.S. Government, its agencies and instrumentalities, that the U.S. government will provide financial support, where it is not obligated to do so.

Prepayment and Extension Risk - The Fund's investments in asset- and mortgage-backed securities are subject to the risk that the principal amount of the underlying collateral may be repaid prior to the bond's maturity date. If this occurs, no additional interest will be paid on the investment and the Fund may have to invest at a lower rate. Conversely, when interest rates rise, certain types of mortgage- and asset-backed securities are subject to extension risk, which is the risk that these securities will be paid off more slowly than originally anticipated and their value will decrease as the average life of the bond and interest rates increase.

Non-Diversification Risk - As a non-diversified mutual fund, the Fund is able to take larger positions in a smaller number of companies than a diversified fund.

Sector Risk - The Fund's investment in any given sector exposes the Fund to that sector's risks. The Fund's performance could be negatively affected if it invests heavily in a sector that performs poorly. A sector's performance, over any period of time, may be quite different from that of the overall market. Certain sectors, such as technology or real estate, can be highly volatile. Bonds of certain sectors have special risks associated with them, as well.

Derivatives Risk - Each Fund may invest in stock index futures contracts and other derivatives. Compared to conventional securities, derivatives can be more sensitive to changes in interest rates or to sudden fluctuations in market prices and thus a Fund's losses may be greater if it invests in derivatives than if it invests only in conventional securities.

Short Selling Risk - The Fund's use of short sales involves additional investment risks and transaction costs. While short sales can be used to further the Fund's investment objective, under certain market conditions they can increase the volatility of the Fund and may lower the Fund's return or result in losses, which potentially may be unlimited.

Borrowing Risk - The Fund's borrowing may increase the Fund's volatility, and interest and other borrowing costs may exceed the gain on securities purchased with borrowed funds.

Opportunity Cost Risk - Fund may have a large cash or cash equivalent position, so it may not do as well as if it were fully invested.

Risks of Investing in a Managed Fund - The advisor's judgment about the attractiveness, value and potential appreciation of particular companies' stocks prove to be incorrect.

Passive Investment Risk - The Funds are not actively managed. Each Fund may be affected by a general decline in the U.S. or foreign market segments relating to its Underlying Index. Each Fund invests in the securities included in, or representative of, its Underlying Index regardless of their investment merit. If the fund is meant to track an index, the fund may be subject to tracking error risk. The Portfolio may have operating expenses, custody and other expenses that reduce the Portfolio's total return.

Market Trading Risks: Absence of Prior Active Market - Although shares of the Fund described in the prospectus are listed for trading on national securities exchanges and certain foreign exchanges, there can be no assurance that an active trading market for such shares will develop or be maintained. **Market Liquidity Risk** - Secondary market trading in Fund shares may be halted by a national securities exchange because of market conditions or for other reasons. There can be no assurance that the requirements necessary to maintain the listing of the shares of any Fund will continue to be met or will remain unchanged.

Securities Lending Risk - The Fund may lend its portfolio securities to broker-dealers and banks. In the event of bankruptcy or other default of the borrower, the Fund could experience both delays in liquidating the loan collateral or recovering the loaned securities and losses, including (a) possible decline in the value of the collateral or in the value of the securities loaned during the period while the Fund seeks to enforce its rights thereto, (b) possible subnormal levels of income and lack of access to income during this period, and (c) expenses of enforcing its rights. In an effort to reduce these risks, the investment adviser will monitor the creditworthiness of the firms to which the Fund lends securities.

Disclosure

As of September 30, 2018

Real Estate Investment Trusts ("REITs") - REITs are entities which either own properties or make construction or mortgage loans. REITs also may include operating or finance companies. Investing in REITs involves certain unique risks in addition to those risks associated with the real estate industry in general. The prices of REITs are affected by changes in the value of the underlying property owned by the REITs. In addition, although the Fund does not invest directly in real estate, a REIT investment by the Fund is subject to certain of the risks associated with the ownership of real estate. These risks include possible declines in the value of real estate, risks related to general and local economic conditions, possible lack of availability of mortgage funds and changes in interest rates.

Commodity Risk - Commodities are assets that have tangible properties, such as oil, metals, and agricultural products. The value of commodities or commodity-linked derivative instruments may be affected by overall market movements and other factors affecting the value of a particular industry or commodity, such as weather, disease, embargoes, or political and regulatory developments.

Risks Associated with Investing in Other Investment Companies - The Fund may invest in shares of other investment companies as a means to pursue its investment objectives. As a result, your cost of investing in the Fund may be substantially higher than the cost of investing directly in the Underlying Fund shares. You will indirectly bear fees and expenses charged by the Underlying Funds in addition to the Fund's direct fees and expenses. Furthermore, the strategy of investing in Underlying Funds could affect the timing, amount and character of distributions to you and therefore may increase the amount of taxes payable by you. In addition, certain prohibitions on the acquisition of mutual fund shares by the Fund may prevent the Fund from allocating its investments in the manner the Adviser considers optimal. **Investment Management Risk:** When the Fund invests in Underlying Funds there is a risk that the investment advisers of those Underlying Funds may make investment decisions that are detrimental to the performance of the Fund. **Underlying Fund Strategies:** When the Fund invests in Underlying Funds that use margin, leverage, short sales and other forms of financial derivatives, such as options and futures, an investment in the Fund may be more volatile than investments in other funds.

Special Situation Risk - Special situations often involve much greater risk than is found in the normal course of investing. Liquidations, reorganizations, recapitalizations, material litigation, technological breakthroughs and new management or policy may not have the effect on a company's price that the Fund's subadviser expects, which could negatively impact the fund.

Risk Arbitrage Securities and Distressed Companies - A merger or other restructuring, a tender or exchange offer, proposed or pending at the time a fund invests in Risk Arbitrage Securities may not be completed on the terms or within the time frame contemplated, resulting in losses to the fund. Securities of Distressed Companies are generally more likely to become worthless than the securities of more financially stable companies.

Portfolio Turnover - The fund may engage in active and frequent trading of portfolio securities. A higher turnover rate increases transaction costs and as a result may adversely impact the fund's performance.

Allocation Risk - The funds are subject to the risk that the allocation strategy will not meet their retirement goals. For investors who are close to, or in retirement, each fund's equity exposure may result in investment volatility that could reduce an investor's available retirement assets at a time when the investor has a need to withdraw funds. For investors who are farther from retirement, there is a risk that a fund's allocation may over-emphasize investments designed to ensure capital conservation and current income, which may prevent the investor from achieving his or her retirement goals.

Exchange Traded Fund (ETF) Risk - ETFs are investment companies that are bought and sold on a securities exchange. When the Fund invests in an ETF, it will bear additional expenses based on its pro rata share of the ETF's operating expenses. The risk of owning an ETF generally reflects the risks of owning the underlying securities the ETF is designed to track. Lack of liquidity in an ETF could result in an ETF being more volatile than the underlying portfolio of securities. In addition, because of ETF expenses, compared to owning the underlying securities directly, it may be more costly to own an ETF.

Disclosure

As of September 30, 2018

Swap Agreements-Swap agreements involve the risk that the party with whom the Fund has entered into the swap will default on its obligation to pay the Fund and the risk that the Fund will not be able to meet its obligations to pay the other party to the agreement. **Credit Default Swaps Risk**-Credit default swaps involve special risks in addition to those mentioned above because they are difficult to value, are highly susceptible to liquidity and credit risk, and generally pay a return to the party that has paid the premium only in the event of an actual default by the issuer of the underlying obligation (as opposed to a credit downgrade or other indication of financial difficulty).

“When Issued” and Delayed Delivery Securities and Forward Commitments-The Fund may purchase or sell securities that it is entitled to receive on a when-issued basis. “When issued” and delayed delivery securities and forward commitments involve the risk that the security the Fund buys will lose value prior to its delivery. There also is the risk that the security will not be issued or that the other party to the transaction will not meet its obligation.

Standby Commitment Agreements-Standby commitment agreements commit the Fund, for a stated period of time, to purchase a stated amount of securities that may be issued and sold to the Fund at the option of the issuer. Standby commitment agreements involve the risk that the security the Fund buys will lose value prior to its delivery to the Fund and will no longer be worth what the Fund has agreed to pay for it. These agreements also involve the risk that if the security goes up in value, the counterparty will decide not to issue the security.

Repurchase Agreements, Purchase and Sale Contracts-Under a repurchase agreement, the seller agrees to repurchase a security at a mutually agreed-upon time and price. Purchase and sale contracts provide that the purchaser receives any interest on the security paid during the period. If the other party to a purchase and sale contract defaults on its obligation under the agreement, the Fund may suffer delays and incur costs or lose money in exercising its rights under the agreement. If the seller fails to repurchase the security in either situation and the market value of the security declines, the Fund may lose money.

Rights and Warrants-The Fund may purchase securities pursuant to the exercise of subscription rights, which allow an issuer’s existing shareholders to purchase additional common stock at a price substantially below the market price of the shares. The failure to exercise such rights would result in the dilution of the Fund’s interest in the issuing company. The market for such rights is not well developed, and, accordingly, the Fund may not always realize full value on the sale of rights. A warrant gives the Fund the right to buy stock. A warrant has value only if the Fund is able to exercise it or sell it before it expires. If the price of the underlying stock does not rise above the exercise price before the warrant expires, the warrant generally expires without any value and the Fund loses any amount it paid for the warrant. Thus, investments in warrants may involve substantially more risk than investments in common stock.

Inflation-Indexed Security-An Inflation-Indexed Security provides principal and interest payments that are adjusted over time to reflect a rise (inflation) or a drop (deflation) in the general price level for goods and services. The Fund is subject to income fluctuations. The Fund’s quarterly income distributions are likely to fluctuate considerably more than the income distributions of a typical bond fund. Income fluctuations associated with changes in interest rates are expected to be low; however income fluctuations resulting from changes in inflation are expected to be high. Overall, investors can expect income fluctuations to be high for the Fund.

Convertible Securities Risk-Because convertible securities can be converted into common stock, their value normally will vary in some proportion with those of the underlying common stock. Due to the conversion feature, convertible securities generally yield less than non-convertible fixed income securities of similar credit quality and maturity. When conversion is not at the option of the holder, a Fund may be required to convert the security into the underlying common stock even at times when the value of the underlying common stock has declined substantially or it would otherwise be disadvantageous to do so.

Preferred Stock Risk-Preferred stock maybe more volatile and riskier than other forms of investment. If interest rates rise, the dividend on preferred stocks may be less attractive, causing the price of preferred stocks to decline. Preferred stock may have mandatory sinking fund provisions or call/redemption provisions that can negatively affect its value when interest rates decline. In addition, in the event of liquidation of a corporation’s assets, the rights of preferred stock generally are subordinate to the rights associated with a corporation’s debt securities.

Pre-Inception Returns

The Inception date listed is that of the investment represented by the investment profile. Performance shown subsequent to the inception date is the actual performance of the investment. Other share classes of the investment itself or its underlying investment (depending upon the investment) may have existed longer, which may account for any pre-inception performance shown. If pre-inception performance is shown, it is generally the performance of an older share class of the investment itself or its underlying investment (depending upon the investment) adjusted for fees and expenses of the newer share class. However, if using the expenses of the newer share class rather than the expenses of the older share class (due to lower expenses of the newer share class) would result in better performance, then pre-inception performance represents that of the older share class without any expense adjustment. The fees and expenses are referenced in the report.

While the inclusion of pre-inception data may provide valuable insight into the probable long-term behavior of newer share classes of an investment, investors should be aware that an adjusted historical return can only provide an approximation of that behavior. For example, the fee structure between a retail share class will vary from that of an institutional share class, as retail share classes tend to have higher operating expenses and sales charges. These adjusted historical returns are not actual returns. Calculation methodologies utilized by Morningstar may differ from those applied by other entities, including the investment itself.
