Subject: Lights on the Southwest Path

It happened again tonight on my bike ride home from work while on the southwest path - even though I have two front lights I didn't see the jogger until the last moment. This has my second close call in two months. I am writing in support of lights for the path. This path has more users than 80% of streets in the city. It is in the middle of a major urban area. It needs to be treated as a real transportation facility. City engineers have taken extraordinary means to reduce spillover lighting. It is modern technology that works. Please take the important step of improving the every day safety of the path. Thank you.
