

Comments from Ken Johnson:

After P 2 add: and will ultimately affect the water quality of our lakes, streams and groundwater.

After P 3 add a new P: PFAS contamination is also a concern in Madison's drinking water. Trace PFAS contamination has already been detected in many of Madison's wells, with the highest level of contamination being recorded in well number 15 which is closest to Truax field.

P 5 at the end of the first sentence add: and accelerate further contamination of surface and groundwater.

P 6 second sentence: strike "but"

P 6 add: Further, the draft EIS does not include the cost of PFAS contamination at Truax Field.

Last P Add: In the absence of an EPA or DNR standard, the board requests that PFAS remediation be conducted to the non-detect level.
