

SDE Committee Members,

Attached you will find the visionary headlines we generated at our first TNS training session. In placing them into buckets you will see an overwhelming number in the area of renewable energy.

For this next session we will use the TNS process to work on the following compelling vision:

Our vision for Madison's sustainable energy future is be a net zero energy* community by 2050.

*Net zero energy is the optimization of energy efficiency then meeting the remaining energy needs with clean renewable energy.

Based on that vision, our TNS exercise will be to work on:

- Key improvement areas;
- Biggest policy and procedures leverage points; and
- Actions and investments

to reach net zero energy.

Please give this some thought in preparation for the session. For those of you who were not at the first session, please review Karl's PowerPoint used at the training that goes through TNS so you don't walk into this cold.
