Subject: Villager monument sign

Description of Work

Forward Electric will provide labor, material, and equipment to perform the following:

Budget pricing for new sign electrical feed

- Install new electrical feed to new monument sign location along Park St
- New feed to originate from existing site lighting pole to the southwest of the new sign location in the grass area between the existing and newer parking lot to the south
- Tie into existing light pole by installing surface mounted conduit on the concrete base and tying into the existing pole
- Trench and install conduit from this pole directly east – turn north at location to match the north-south grass area and continue north to the new sign location
- Install conduit and wiring, tie in sign and test operation
- Sign will go on and off to match existing site lighting control
- Coordinate with diggers hotline and the city for work in the city right of way
- Trench, backfill, and seed along trench route
- Pricing assumes that the existing circuit in the light pole is capable of handling the new sign load
- Pricing assumes that the city will allow for trenching in their right of way for new sign feed
- No rock excavation figured – standard trenching conditions are assumed

Budget pricing total: \$ 4,968

Please contact me at 608-444-2117 or mark@forwardelectric.com with any questions or concerns regarding this proposal.
