URBAN DESIGN COMMISSION APPROVAL PROCESS

UDC

Introduction

The City of Madison's Urban Design Commission (UDC) has been created to:

- Encourage and promote high quality in the design of new buildings, developments, remodeling, and additions so as to maintain and improve the established standards of property values within the City.
- Foster civic pride in the beauty and nobler assets of the City, and in all other ways possible assure a functionally efficient and visually attractive City in the future.

Types of Approvals

There are three types of requests considered by the UDC:

- Informational Presentation. Applicants may, at their discretion, request to make an Informational Presentation to the UDC prior to seeking any approvals to obtain early feedback and direction before undertaking detailed design. Applicants should provide details on the context of the site, design concept, site and building plans, and other relevant information to help the UDC understand the proposal and provide feedback. (Does not apply to CDR's or Signage Variance requests)
- Initial Approval. Applicants may, at their discretion, request initial approval of a proposal by presenting preliminary design information. As part of their review, the Commission will provide feedback on the design information that should be addressed at Final Approval stage.
- Final Approval. Applicants may request Final Approval of a proposal by presenting all final project details. Recommendations or concerns expressed by the UDC in the initial approval must be addressed at this time.

Presentations to the Commission

Primarily, the UDC is interested in the appearance and design quality of projects. Emphasis should be given to the site plan, landscape plan, lighting plan, building elevations, exterior building materials, color scheme, and graphics.

When presenting projects to the UDC, applicants must fill out a registration slip provided in the meeting room and present it to the Secretary. Presentations should generally be limited to 5 minutes or as extended by motion by consent of the Commission. The Commission will withhold questions until the end of the presentation.

Applicants are encouraged to consider the use of various graphic presentation material including a locator map, photographs, renderings/model, scale drawings of the proposal in context with adjacent buildings/uses/signs, etc., as may be deemed appropriate to describe the project and its surroundings. Graphics should be mounted on rigid boards so that they may be easily displayed. **Applicants/presenters are responsible for all presentation materials, AV equipment and easels**.

Re: Hartmeyer Redevelopment Lot 1 – 250 Senior Affordable Units

Dear Plan Commission Members:

Please accept this revised letter of intent and land use application for the development of senior affordable housing at 2007 Roth Street. We are requesting a conditional use approval. A subdivision application has also been submitted with a concurrent approval schedule.

Project Team

Developer:	Lincoln Avenue Capital 401 Wilshire Blvd Ste 1070 Santa Monica, CA 90401 Kevin McDonnell (kevin@lincolnavecap.com) Kyle Brasser (kbrasser@lincolnavecap.com)
Architect:	JLA Architects 800 W Broadway Suite 200 Monona, WI 53713 Marc Ott (mott@jla-ap.com)
Civil & Landscape:	JSD Professional Services 161 Horizon Dr #101 Verona, WI 53593 Matt Haase (matt.haase@jsdinc.com)
Development Consultant	Urban Assets PO Box 258169 820 Wingra Drive Madison, WI 53715 Melissa Huggins (melissa@urbanassetsconsulting.com)

Existing Conditions

The project site is located on the north side of Madison adjacent to the former Oscar Mayer facilities. The site is unique in that half was used for industrial and light manufacturing purposes and half is a much beloved natural area, recently designated by CARPC as an environmental corridor, that includes wetlands and is host to numerous flora and fauna. The site, which is vacant except for an old parking lot, is owned by the Hartmeyer Trust and was leased to Oscar Mayer from 1954 to 2019.

Oscar Mayer used the property for coal and above ground tank storage. Consequently, the site was considered a brownfield and underwent numerous clean ups (1989, 2001, and 2016) with DNR closure provided in 2008 and 2017. Upon completion of their lease, Oscar Mayer conducted additional testing in 2019 and 2020. Lincoln Avenue Capital completed another round of testing as part of the project and is confident the site is appropriate for residential uses.

The natural area includes numerous healthy oak trees adjacent to Roth Street, which will be preserved. The area near the trees is suspected of being a Ho Chunk burial mound. A line of trees runs north south along the edge of the natural area. Parks and Forestry staff have walked the site and determined the trees are of poor quality and condition. The area has been used to dump concrete, asphalt, and other construction materials, compromising the health of the trees.

Project Overview

The development is the first project to be implemented under the Oscar Mayer Special Area Plan (OMSAP) and will set the stage for the future redevelopment of the area. Prior to beginning the detailed design process, the development team worked closely with the alder, city staff, neighbors on the mapping of the new streets, Roth and Huxley, as well as on the rezoning of the property to TR-U2, RMX, and Conservation.

This phase of the project includes the development of affordable housing on the parcels zoned TR-U2 and the transfer of the 15.3 acre natural area, zoned Conservation, to the City of Madison Department of Parks. Funding for the project is being provided by WHEDA to support a minimum of 550 units of affordable housing. A future phase will be located in the area zoned RMX at the south end of the property adjacent to Commercial Avenue.

The new streets, including the bike path along Roth Street, will be constructed as part of this phase. Huxley Street will dead end at the railroad tracks until the new railroad crossing is secured. The city is working to close the existing Roth Street railroad crossing in exchange for the new crossing at Huxley Street.

Senior Building

The six-story senior building will include 250 units of affordable housing with mix of one and two bedrooms. A number of first floor units located on both Roth Street and Coolidge Street will include walk up entrances. The building faces towards the natural area across Roth Street with a driveway and Porte Cochère for ease of pick up and drop off. The building will provide numerous interior and exterior amenity spaces, including two roof decks for active and passive recreation. The building will wrap around the parking structure with 266 parking spaces for residents and 19 parking spaces for visitors/users of the community spaces. A total of 281 bike parking spaces are included in the building for residents with additional visitor bike parking on the exterior.

Landscaping around the building will reference the natural area across the new Roth Street through the use of native plants. Walking paths and areas for resting and reflection are located along t Huxley Street. A finger of the environmental corridor lies at the south east corner of the building and will be landscaped to reflect a more natural condition.

The east facing façade of the parking garage presents the opportunity for a mural. Lincoln Avenue Capital will be consulting with Mark Fraire from Dane Arts to engage local artists.

LINCOLN AVENUE CAPITAL

Sustainability
The building will meet Wisconsin Green Built Home (WGBH) or Enterprise Green Communities (EGC) standards and will include green roofs. Lincoln Avenue Capital is still evaluating whether solar will be included, but the building will be solar ready.

Lincoln Avenue Capital is committed to sustainability. They were awarded an Energy Innovation Grant from the Wisconsin Public Service Commission to develop an energy load model and metering strategy to reduce utility bills. The project and final report will serve as a case study to be distributed to Wisconsin and national affordable housing developers. Lincoln Avenue Capital is also an active member of a multi-family housing group focused on how Environmental, Social, and Governance (ESG) investments should be tracked.

Operations
The building will be managed by Wisconsin Management Company.

Staff and Neighborhood Input
The process of mapping the new streets and the rezoning was a collaborative effort and engaged the policy makers, city staff, Friends of Hartmeyer, and representatives from the neighborhood associations. The design process included two trips to Development Assistance Team (DAT), many conversations with planning staff and three neighborhood meetings. The neighborhood meetings occurred in July, August, and October and were generally positive.

Lot Coverage
Total Lot Area = 125,888.4 SF/2.89 acres
Dwelling Units = 250
Lot Area/Dwelling Units = 503.6 SF per unit
Density = 87 DU per acre

Zoning
Traditional Residential Urban Two (TR-U2).

Construction Timeline
April 1, 2023 to October 1, 2024.

Total landscape points required: **351 POINTS**

~~(B) For lots larger than five (5) acres, points shall be provided at five (5) points per three hundred (300) square feet for the first Five (5) developed acres, and one (1) point per one hundred (100) square feet for all additional acres:~~

28.129 BIRD-SAFE REQUIREMENTS:

(1) Statement of Purpose: The Bird-Safe Glass Requirements in this section are intended to reduce the heightened risk for bird collisions with glass on specified building designs and configurations.

(2) Applicability: Subsection (4) applies to all exterior construction and development activity, including the expansion of existing buildings and structures, as specified therein.

(3) Measuring Glass Area: Under this Ordinance, glass area shalle be measured as one (1) continuous panel of glass or other transparent material, or a set of two (2) or more such panels divided by mullions of six (6) inches in width or narrower. Panels surrounded on all sides by solid walls or mullions wider than six (6) inches shall be considered individual windows. Spandrel or opaque reflectivity of 14% or less shall not be included in the calculation of glass area. See Revised Figure 1.

(4) Bird-Safe Glass Treatment Requirements: Glass areas on the following buildings or structures shall be treated to reduce the risk of bird collision by incorporating a pattern of visual markers that are either; a) dots or other isolated shapes that are 1/4" in diameter or larger and spaced at not more than a two-inch (2") by two-inch (2") pattern; or b) lines that are 1/8" in width or greater and spaced no more than 2" apart; low reflective opaque materials; building-integrated structures like non-glass double-skin facades, metal screens, fixed solar shading, exterior insect screens, and other features that cover the glass surface; or other similar mitigation treatments approved by the Zoning Administrator.

(a) Buildings or structures over 10,000 square feet: For any building or structure over 10,000 square feet in size (floor area of above-grade stories), bird-safe glass treatment is required as follows:

1. For building facades where the first sixty (60) feet (See REVISED Figure 2) from grade are comprised of greater than or equal to fifty percent (50%) glass:

   a. At least eighty-five percent (85%) of the glass must be treated; and
   b. All glass within fifteen (15) feet of a building corner must be treated when see through or fly through conditions exist. See Figure 3.

2. For building facades where the first sixty (60) feet from grade are comprised of less than fifty percent (50%) glass;

   a. At least eighty-five percent (85%) of the glass on glass areas fifty (50) square feet or over must be treated; and
   b. Of all glass areas over fifty (50) square feet, any glass within fifteen (15) feet of a building corner must be treated.

3. All glass railings must be treated.

4. All glass on enclosed building connections shall be treated up to sixty (60) feet above grade.

(b) Sky-bridges: For buildings and structures of any size, all glass on above-ground bridges must be treated.

(c) At grade glass: For buildings and structures of any size, all at grade glass features such as sound walls or glass screens must be treated.

(5) This Ordinance shall become effective October 1, 2020.

HOW TO ESTIMATE DELIVERED LUMENS IN EMERGENCY MODE

Use the formula below to estimate the delivered lumens in emergency mode

Delivered Lumens = 1.25 x P x LPW

P = Ouput power of emergency driver. P = 10W for PS1055CP

LPW = Lumen per watt rating of the luminaire. This information is available on the ABL luminaire spec sheet.
The LPW rating is also available at Designlight Consortium.

nCM ADCX Daylight Sensor with Automatic Dimming Control
nCM PDT 9 Dual Technology Occupancy Sensor

Description: This design provides a dual on/off/dim wall station that enables manual control of the fixtures in Row A and Row B separately. Additionally, a daylight harvesting sensor is provided so the lights in Row B can be configured to dim automatically when daylight is available. An occupancy sensor turns off all lights when the space is vacant.

UL924 Sequence of Operation

The below information applies to all nLight AIR devices with an EM option.

- EM devices will remain at their high-end trim and ignore wireless lighting control commands, unless a normal-power-sensed (NPS) broadcast is received at least every 8 seconds.
- Using the CL**AIR**ITY+ mobile app, EM devices must be associated with a group that includes a normal power sensing device to receive NPS broadcasts.
- Only non-emergency rPP20, rLSXR, rSBOR, rSDGR, and nLight AIR luminaires with version 3.4 or later firmware can provide normal power sensing for EM devices. See specification sheets for control devices and luminaires for more information on options that support normal power sensing.

nLight AIR

nLight AIR is the ideal solution for retrofit or new construction spaces where adding communication is cost prohibitive. The integrated nLight AIR rPP20 Power Pack is part of each Lithonia LDN Luminaire. These individually addressable controls offer the ultimate in flexibility during initial setup and for space repurposing.

Simple as 1,2,3

1. Install the nLight® AIR fixtures with embedded smart sensor
2. Install the wireless battery-powered wall switch
3. With CL**AIR**ITY app, pair the fixtures with the wall switch and if desired, customize the sensor settings for the desired outcome

Introduction

The modern styling of the D-Series is striking yet unobtrusive - making a bold, progressive statement even as it blends seamlessly with its environment. The D-Series distills the benefits of the latest in LED technology into a high performance, high efficacy, long-life luminaire.

The outstanding photometric performance results in sites with excellent uniformity, greater pole spacing and lower power density. It is ideal for replacing up to 750W metal halide in pedestrian and area lighting applications with typical energy savings of 65% and expected service life of over 100,000 hours.

Controls Options				
Nomenclature	**Description**	**Functionality**	**Primary control device**	**Notes**
FAO	Field adjustable output device installed inside the luminaire; wired to the driver dimming leads.	Allows the luminaire to be manually dimmed, effectively trimming the light output.	FAO device	Cannot be used with other controls options that need the 0-10V leads
DS	Drivers wired independently for 50/50 luminaire operation	The luminaire is wired to two separate circuits, allowing for 50/50 operation.	Independently wired drivers	Requires two separately switched circuits. Consider nLight AIR as a more cost effective alternative.
PER5 or PER7	Twist-lock photocell recepticle	Compatible with standard twist-lock photocells for dusk to dawn operation, or advanced control nodes that provide 0-10V dimming signals.	Twist-lock photocells such as DLL Elite or advanced control nodes such as ROAM.	Pins 4 & 5 to dimming leads on driver, Pins 6 & 7 are capped inside luminaire
PIR or PIRH	Motion sensors with integral photocell. PIR for 8-15' mounting; PIRH for 15-30' mounting	Luminaires dim when no occupancy is detected.	Acuity Controls SBGR	Also available with PIRH1FC3V when the sensor photocell is used for dusk-to-dawn operation.
NLTAIR2 PIRHN	nLight AIR enabled luminaire for motion sensing, photocell and wireless communication.	Motion and ambient light sensing with group response. Scheduled dimming with motion sensor over-ride when wirelessly connected to the nLight Eclypse.	nLight Air rSDGR	nLight AIR sensors can be programmed and commissioned from the ground using the CIAIRity Pro app.

FEATURES & SPECIFICATIONS

INTENDED USE
The sleek design of the D-Series Size 1 reflects the embedded high performance LED technology. It is ideal for many commercial and municipal applications, such as parking lots, plazas, campuses, and streetscapes.

CONSTRUCTION
Single-piece die-cast aluminum housing has integral heat sink fins to optimize thermal management through conductive and convective cooling. Modular design allows for ease of maintenance and future light engine upgrades. The LED drivers are mounted in direct contact with the casting to promote low operating temperature and long life. Housing is completely sealed against moisture and environmental contaminants (IP65). Low EPA (1.01 ft^2) for optimized pole wind loading.

FINISH
Exterior parts are protected by a zinc-infused Super Durable TGIC thermoset powder coat finish that provides superior resistance to corrosion and weathering. A tightly controlled multi-stage process ensures a minimum 3 mils thickness for a finish that can withstand extreme climate changes without cracking or peeling. Available in both textured and non-textured finishes.

OPTICS
Precision-molded proprietary acrylic lenses are engineered for superior area lighting distribution, uniformity, and pole spacing. Light engines are available in standard 3000 K, 4000 K and 5000 K (70 CRI) configurations. The D-Series Size 1 has zero uplight and qualifies as a Nighttime Friendly™ product, meaning it is consistent with the LEED® and Green Globes™ criteria for eliminating wasteful uplight.

ELECTRICAL
Light engine configurations consist of high-efficacy LEDs mounted to metal-core circuit boards to maximize heat dissipation and promote long life (up to L85/100,000 hours at 25°C). Class 1 electronic drivers are designed to have a power factor >90%, THD <20%, and an expected life of 100,000 hours with <1% failure rate. Easily serviceable 10kV surge protection device meets a minimum Category C Low operation (per ANSI/IEEE C62.41.2).

STANDARD CONTROLS
The DSX1 LED area luminaire has a number of control options. DSX Size 1, comes standard with 0-10V dimming drivers. Dusk to dawn controls can be utilized via optional NEMA twist-lock photocell receptacles. Integrated motion sensors with on-board photocells feature field-adjustable programing and are suitable for mounting heights up to 30 feet.

nLIGHT AIR CONTROLS
The DSX1 LED area luminaire is also available with nLight® AIR for the ultimate in wireless control. This powerful controls platform provides out-of-the-box basic motion sensing and photocontrol functionality and is suitable for mounting heights up to 40 feet. Once commissioned using a smartphone and the easy-to-use CLAIRITY app, nLight AIR equipped luminaries can be grouped, resulting in motion sensor and photocell group response without the need for additional equipment. Scheduled dimming with motion sensor over-ride can be achieved when used with the nLight Eclypse. Additional information about nLight Air can be found here.

INSTALLATION
Included mounting block and integral arm facilitate quick and easy installation. Stainless steel bolts fasten the mounting block securely to poles and walls, enabling the D-Series Size 1 to withstand up to a 3.0 G vibration load rating per ANSI C136.31. The D-Series Size 1 utilizes the AERIS™ series pole drilling pattern (template #8). NEMA photocontrol receptacle are also available.
