

There were 27,450 students in the data set that fed this table. The response rates for these questions are: 89.5% for the Internet question, 86.5% for the Wireless question, and 94.9% for all other questions. These statistics are the percent of responders that answered in the affirmative (not the percent of students in the data set). For any more detailed analysis please go to MMSD Website noted below.

Access to Technology in MMSD Elementary Schools

This table shows the results of the 2014 Home Technology Survey distributed in MMSD. It shows the percent of students with indicated access to the technology item mentioned living within each school attendance area. Use the "Select Question" dropdown to choose which survey question you want to see represented on the map. Hold your mouse over an attendance area to see the school's name and the percent of students with access to the device indicated in the question selected.

The color gradient goes from the lowest to highest values by question; this means that even questions with small variance in actual responses will have large color variance, so look at the numbers at either end of the "Value" scale to see the low and high values for that question.
